The concept of learning to 'think like a lawyer' is one of the cornerstones of legal education in the United States and beyond. In this book, Jeffrey Lipshaw provides a critique of the traditional views of 'thinking like a lawyer' or 'pure lawyering' aimed at lawyers, law professors, and students who want to understand lawyering beyond the traditional warrior metaphor. Drawing on his extensive experience at the intersection of real world law and business issues, Professor Lipshaw presents a sophisticated philosophical argument that the "pure lawyering" of traditional legal education is agnostic to either truth or moral value of outcomes. He demonstrates pure lawyering's potential both for illusions of certainty and cynical instrumentalism, and the consequences of both when lawyers are called on as dealmakers, policymakers, and counsellors. This book offers an avenue for getting beyond (or unlearning) merely how to think like a lawyer. It combines legal theory, philosophy of knowledge, and doctrine with an appreciation of real-life judgment calls that multi-

disciplinary lawyers are called upon to make. The book will be of great interest to scholars of legal education, legal language and reasoning as well as professors who teach both doctrine and thinking and writing skills in the first year law school curriculum; and for anyone who is interested in seeking a perspective on 'thinking like a lawyer' beyond the litigation arena.

Management Control Systems: Text And Cases John Wiley & Sons

This book integrates the models employed in the fundamental analysis of a company with the models used by investors in the capital markets to diversify risks and maximize expected returns. The underlying thesis is that the company creates value only if the return on capital invested exceeds the cost of capital, while the objective is to demonstrate how integration of the fields of corporate finance and asset pricing enables comprehensive and accurate company valuation. Companies can thrive only if they are able to create value for shareholders over time. A company's value creation and the correct approach to its measurement require two main skills: first, the ability to analyze and evaluate the company's fundamentals with respect to its business model and its performance over time; and second, knowledge of investors' models with regard to risk diversification and return maximization from which the cost of capital for the firm is derived. Based on this perspective, the book combines rigorous quantitative analysis with effective use of graphics to aid intuitive understanding.
