Knowing Machines Simon and Schuster

"Sixteen states came to be ruled by communist parties during the 20th century. Only five of them remain in power today. This book explores the nature of communist regimes-what they share in common, how they differed from each other, and how they differentially evolved over time. It finds that these regimes all came to power in the context of warfare or its aftermath, followed by the consolidation of power by a revolutionary elite that came to value "revolutionary violence" as the

preferred means to an end, based upon Marx's vision of apocalyptic revolution and Lenin's conception of party organization. All these regimes went on to "build socialism" according to a Stalinist template, and were initially dedicated to "anti-imperialist struggle" as members of a "world communist movement." But their common features gave way to diversity, difference and defiance after the death of Joseph Stalin in 1953. For many reasons, and in many ways, those differences soon blew apart the world communist movement. They eventually led to the collapse of European communism. The remains of communism in China, Vietnam, Laos, North Korea, and Cuba were made possible by the first three transforming their economic systems, opening to the capitalist international order, and abandoning "anti-imperialist struggle." North Korea and Cuba have hung on due to the elites avoiding splits visible to the public. Analytically, the book explores, throughout, the interaction among the internal features of communist regimes (ideology and organization), the interactions among them within the world communist movement, and the interaction of communist states with the broader international order of capitalist powers"--

Providing a capstone to Philip Selznick's influential body of scholarly work, *A Humanist Science* insightfully brings to light the value-centered nature of the social sciences. The work clearly challenges the supposed separation of fact and value, and argues that human values belong to the world of fact and are the source of the ideals that govern social and political institutions. By demonstrating the close connection between the social sciences and the humanities, Selznick reveals how the methods of the social sciences highlight and enrich the study of such values as well-being, prosperity, rationality, and self-government. The book moves from the animating principles that make up the humanist tradition to the values that are central to the social sciences, analyzing the core teachings of these disciplines with respect to the moral issues at stake. Throughout the work, Selznick calls attention to the conditions that affect the emergence, realization, and decline of human values, offering a valuable resource for scholars and students of law, sociology, political science, and philosophy.

The essays are tied together by their explorations of connections (primarily among technology, society, and knowledge) and by their general focus on modern "high" technology. They also share an emphasis on the complexity of technological formation and fixation and on the role of belief (especially self-validating belief) in technological change.

Medieval Context to Modern Revival Routledge

This work places in historical and theoretical contexts the work Germani in the area of modernization, especially as it relates to Latin America. Germani views modernization as the touchstone of the twentieth century. His notion of modernization has to do with how a society can harness technology for distinctly political ends and link science to distinctly economic ends.

The Routledge Companion to Historical Theory Routledge

In this new edition Professor Tibi analyses the impact and function of nationalism and its contribution to social and political change in the Third World, taking the rise of nationalism in the Middle East as a historical example. He concentrates on the period after the First World War, when many Arab intellectuals became disillusioned with Britain and France as a result of the occupation of their countries. Professor Tibi's careful study of the writings and influence of Sati' al-Husri illustrates the connection between modern Arab nationalism and nineteenth century German Romantic nationalism, which will be of particular interest to the English reader. Professor Tibi concludes that while nationalism has played a necessary and important role in the movement for national independence in the Middle East, it has since developed into an ideology which seems to obstruct further social and political emancipation. This book will be of particular interest to historians and social scientists as well as to specialists in the area itself.

German Idealism develops its philosophy of history as the theory of becoming absolute and as absolute knowledge. Historism also originates from Hegel's and Schelling's discovery of absolute historicity as it turns against Idealism's philosophy of history by emphasizing the singular and unique in the process of history. German Idealism and Historism can be considered as the central German contribution to the history of ideas. Since Idealism became most influential for modern philosophy and Historism for modern historiography, they are analyzed in this volume in a collaboration of philosophers and historians. German Idealism is presented in Schelling and its critics Schlegel, Baader, and Nietzsche; Historism in Ranke, Droysen, Burckhardt, and Treitschke. The volume further presents the impact of Idealism and Historism on present German approaches to the philosophy of history and outlines the debates on the possibility of a philosophy of history and on the methodology of the historical sciences.

This concise and accessible introduction to Strauss's thought provides, for wider audience, a bridge to his more complex theoretical work. Editor Pangle has gathered five of Strauss's previously unpublished lectures and five hard-to-find published writings and has arranged them so as to demonstrate the systematic progression of the major themes that underlay Strauss's mature work. "[These essays] display the incomparable insight and remarkable range of knowledge that set Strauss's works apart from any other twentieth-century philosopher's."—Charles R. Kesler, National Review

Traditions & Encounters offers an inclusive vision of the global past—one that is meaningful and appropriate for the interdependent world of contemporary times. Given the diversity of human societies, gathering and organizing the sheer mass of information in a meaningful way is a daunting challenge for any world history survey course. The seven-part chronological organization enables students to understand the development of the world through time, while also exploring broader, big-picture thematic issues in world history. Through new and revised chapter-level and part-level features, the hallmark twin themes of traditions and encounters emerge in greater clarity than ever before in this sixth edition. As a result, students have resources that enable them to move beyond the facts of history and examine the past critically, analyze causes and effects, and recognize similarities and differences across world regions and time periods. By digging deeper into the implications of world history's stories—not just the who, the what, and the where, but also the why and the how—students can make sense of the human past. Connect is the only integrated learning system that empowers students by continuously adapting to deliver precisely what they need, when they need it, and how they need it, so that your class time is more engaging and effective.

The Rebirth of Classical Political Rationalism Routledge

Combining rigorous academic scholarship with the experience of a senior Pentagon policymaker, Mara E. Karlin explores the key national security issue of our time: how to effectively build partner militaries. Given the complex and complicated global security environment, declining U.S. defense budgets, and an increasingly connected (and often unstable) world, the United States has an ever-deepening interest in strengthening fragile states. Particularly since World War II, it has often chosen to do so by strengthening partner militaries. It will continue to do so, Karlin predicts, given U.S. sensitivity to casualties, a constrained fiscal environment, the nature of modern nationalism, increasing transnational security threats, the proliferation of fragile states, and limits on U.S. public support for military interventions. However, its record of success is thin. While most analyses of these programs focus on training and equipment, *Building Militaries in Fragile States* argues that this approach is misguided. Instead, given the nature of a fragile state, Karlin homes in on the outsized roles played by two key actors: the U.S. military and unhelpful external actors. With a rich comparative case-study approach that spans Europe, Asia, and the Middle East, Karlin unearths provocative findings that suggest the traditional way of working with foreign militaries needs to be rethought. Benefiting from the practical eye of an experienced national security official, her results-based exploration suggests new and meaningful findings for building partner militaries in fragile states.
