Go on the trip of a lifetime. Two Wheels South shows you how to realize your own journey. Two friends take the motorcycle trip of their life--From Brooklyn to Patagonia. Matias Corea shares his insights on how to prepare, choose the right motorcycle, what to pack, how to plan the route, where to camp and last but not least: How to prepare your mind. Setbacks and breaking down are part of the adventure, but preparation and being on the road teach you the confidence to tackle any problem. Follow Matias Corea and his friend Joel through the American South, Central America over the Darien Gap and beyond, over wooden cracking jungle bridges in Colombia and to dry lake high plateaus in Argentina. Feel the character of the roads and the smell of nature: Riding a motorcycle is one of the purest forms of traveling. After 7 months and 13 countries Matias and Joel have learned a lot while riding down south on their trusty BMW air-cooled G / S overland haulers and are ready to share their experience. Two Wheels South invites you on the experience of a lifetime.

A one-of-a-kind book discussing drug-membrane sensors in pharmaceutical analysis Pharmaceutical Applications of Membrane Sensors is the first book to deal with the theory of drug-membrane sensors, as well as applications of such devices in pharmaceutical analysis. The book contains three main parts. The three major sections of the book cover the design and principles of membrane drug sensors, the use of membrane sensors in the analysis of pharmaceuticals, and various aspects of drug release monitoring by membrane sensors. Detailed analytical methods for more than 400 organic pharmaceuticals assayed by membrane sensor techniques are presented. Pharmaceutical Applications of Membrane Sensors will be a valuable reference for specialists in analytical and pharmaceutical chemistry, electroanalytical chemistry, medicine, pharmaceutical sciences, and pharmacology.

"Major Jim Gant, a man seen by many of us as the 'perfect insurgent,'--an inspiring, gifted, courageous leader... -- GENERAL DAVID H. PETRAEUS (U.S. Army, Ret.) THE PAPER THAT ROCKED OSAMA BIN LADEN Team members during the May 2, 2011 U.S. military raid that killed Osama Bin Laden seized piles of Al Qaeda intelligence. One piece of evidence found in Bin Laden's personal sleeping quarters was an English language copy of Jim Gant's One Tribe at a Time. It contained notes in the margins consistent with others identified as written by Osama Bin Laden. A directive from Osama Bin Laden to his intelligence chief was also discovered. It identified Jim Gant by name as an impediment to Al Qaeda's operational objectives for eastern Afghanistan. Bin Laden ordered that Gant be assassinated. "[One Tribe at a Time] was hugely important...at a time when I was looking for

ideas on Afghanistan...[Gant] was the first to write it down, in a very coherent fashion, very readable, very encouraging frankly...and there is enormous power in that." --General David H. Petraeus (U.S. Army, Ret.) quoted in American Spartan: The Promise, The Mission, and The Betrayal of Special Forces Major Jim Gant by Ann Scott Tyson Washington Post reporter Ann Scott Tyson read "One Tribe at a Time," and - informed by her combat experience in Afghanistan and Iraq and her eight years as a reporter in China - she realized that Jim's paper made sense. She decided to write a story about Jim entitled, "Jim Gant, the Green Beret who could win the war in Afghanistan." After the article appeared in January 2010, as Jim was in Washington, D.C., attending Pashto language training, he met Ann and the two fell in love. She followed his mission in Afghanistan and wrote AMERICAN SPARTAN: The Promise, the Mission, and the Betrayal of Special Forces Major Jim Gant. *Two Wheels South* Black Irish Entertainment LLC

Considered a definitive source for scholars and students, this highly acclaimed series illustrates the impact of Greek and Latin texts on the Middle Ages and Renaissance. In publication since 1960 and now in its eighth volume, the *Catalogus Translationum et Commentariorum* furnishes concrete evidence of when, where, and how an ancient author was known and appreciated in monastic, university, and humanist circles. Each article presents a historical survey of the influence and circulation of a particular author down to the present, followed by an exhaustive listing and brief description of Latin commentaries before 1600 on each of his works. For Greek authors, a full listing of pre-1600 translations into Latin is also provided. Sources of translations and commentaries include both printed editions and texts available only in medieval and Renaissance manuscripts. In the newest addition to the series, Volume VIII, six authors are treated in separate articles: Damianus, Geminus Rhodius, Hanno, Sallust, Themistius, and Thucydides. This volume is especially notable for its variety. Thucydides and Sallust were major historians and the interest their works generated -- in such diverse figures as Macchiavelli, Thomas More, and Thomas Hobbes -- has continued unabated. Damianus and Geminus Rhodius influenced optics and astronomy. Themistius provided a useful service to later students of Aristotle by paraphrasing Aristotle's treatises on logic,

psychology, and natural science. Hanno's account of a voyage around the coast of West Africa has been regarded as a motivating factor behind the explorations of Vasco da Gama and Pedro Alvares Cabral and was cited in controversies involving the Portuguese and Spanish claims to the coasts of Africa and America. A list of addenda and corrigenda to four previously published articles (Columella, Tacitus, Vegetius, Xenophon) concludes the volume.

Opportunities and optimism in Aging. Issues in Aging, 3rd edition takes an optimistic view of aging and human potential in later life. This book presents the most up-to-date facts on aging today, the issues raised by these facts, and the societal and individual responses that will create a successful old age for us all. Mark Novak presents the full picture of aging--exhibiting both the problems and the opportunities that accompany older age. The text illustrates how generations are dependent on one another and how social conditions affect both the individual and social institutions. Learning Goals -Upon completing this book, readers will be able to: -Understand how large-scale social issues--social attitudes, the study of aging, and demographic issues--affect individuals and social institutions -Identify the political responses to aging and how individuals can create a better old age for themselves and the people they know -Separate the myths from the realities of aging -Recognize the human side of aging -Trace the transformation of pension plans, health, and opportunities for personal expression and social engagement to the new ecology of aging today

Membrane Electrodes in Drug-Substances Analysis discusses the analytical control of drugs using ion-selective membrane electrodes. This book is divided into three parts, comprised of 18 chapters organized according to the topics they cover. The first part covers the general aspects of membrane electrodes, which includes topics such as theoretical considerations and the basic characteristics of membrane electrodes. Part II deals with the general methods of analysis using membrane electrodes, and Part III tackles the determination of drug-substances. This book will be of great use to researchers and professionals engaged in drug research.

The Science Focus Second Edition is the complete science package for the teaching of the New South Wales Stage 4 and 5 Science Syllabus. The Science Focus Second Edition package retains the identified strengths of the highly successful First Edition and includes a number of new and exciting

features, improvements and components. The student book includes: Chapter opening pages which include the key prescribed focus area for the chapter and a clear distinction between essential and additional content; Updated and revised content, photos, illustrations and 'science clip' boxes in a format that is easy to read and follow; Unit questions under headings that are structured in a hierarchical progression using Bloom's Revised Taxonomy; Additional questions which include research, creative writing, investigations and internet activities; Practical activities at the end of each unit allowing teachers to choose when to do practical work.; Student CD which contains an electronic version of the student book.

Over the past decade ecotoxicology has emerged as a distinct subject of interdisciplinary character. Courses in ecotoxicology reflect this and are taught by specialists in chemistry and biochemistry through to population genetics and ecology. As the first textbook to incorporate all relevant aspects of chemistry, biochemistry, toxicology, physiology, population ecology and population genetics, the first edition of this book proved to be well received across several industries. Featuring fully revised text and new illustrations, Principles of Ecotoxicology identifies the major classes of organic and inorganic pollutants, their properties, release and environmental fate, and transport in air, water and along food chains, before considering the effects that they might have upon individual organisms and ultimately whole ecosystems. This timely second edition of Principles of Ecotoxicology incorporates data collected since the first edition on subjects of current research and media interest such as organochloride pesticides, endocrine disruptors, aquatic toxicity, industrial waste and ecotoxicity testing.

Eliot H. Dunskey, MD, is a retired physician who since his diagnosis in 2009 has been living with ALS, the complex, progressively debilitating disorder commonly known as Lou Gehrig's disease. Determined to maintain the best quality of life possible-for as long as possible-he extensively researched the condition and its management. As he immersed himself, talking to ALS patients and exploring emerging assistive technologies and aids, he realized that misunderstanding of this complicated disease was rife, preventing many from making the most of the precious years left. The result is this compilation of not only his personal experiences as his own condition advanced but also current research and links to additional specialized resources. Its aim is to help other patients learn to live with their diagnosis and navigate the day-to-day struggles associated with it. Appropriate symptom management can help fend off the devastating effects of the disease for a longer period of time. ALS: An Orientation offers a practical guide for patients and their families on maximizing quality of life through strategic care and, importantly, coping with the emotional toll the disease can take. A terminal diagnosis simply means savoring to the fullest the life that is still possible.

We continue in this second volume the plan evident in the first; i.e., of presenting a number of well-rounded up-to-date reviews of important developments in the exciting field of ion-selective electrodes in analytical chemistry. In this volume, in addition to the exciting applications of ISE'S to biochemistry systems represented by the description of enzyme electrodes, there is featured the most recent development in ISE'S, namely, the joining of the electrochemical and solid state expertise, resulting in CHEMFETS. The scholarly survey of the current status of ISE'S will undoubtedly be welcomed by all workers in the field. The present book deals with the principle of the aforementioned techniques and discusses the information they provide for electrode kinetics. Special attention is paid to the activity step method, since this technique is carried out under zero current potentiometric conditions and allows the study of the processes at the perturbed membrane-solution interface.

Following the structure of previous editions, Volume 1 of this Sixth Edition proceeds through four individual chapters on geosynthetics, geotextiles, geogrids and geonets. Volume 2 continues with geomembranes, geosynthetic clay liners, geofoam and geocomposites. The two volumes must accompany one another. All are polymeric materials used for myriad applications in geotechnical, geoenvironmental, transportation, hydraulic and private development applications. The technology has become a worldwide enterprise with approximate \$5B material sales in the 35-years since first being introduced. In addition to describing and illustrating the various materials; the most important test methods and design examples are included as pertains to specific application areas. This latest edition differs from previous ones in that sustainability is addressed throughout, new material variations are presented, new applications are included and references are updated accordingly. Each chapter includes problems for which a solutions manual is available.
