Precast concrete floor units are widely used in all types of building. It is estimated that 50% of multi-storey steel framed buildings use precast concrete floors. The precast concrete floor unit is used to span between supporting steel beams as an alternative to in-situ concrete and metal decking. Precast Concrete Floors in Steel Framed Buildings Prestressed concrete

refers to concrete that has applied stresses induced into the member. Typically, wires or “tendons” are stretched and then blocked at the ends creating compressive stresses throughout the member’s entire cross-section. Most Prestressed concrete is precast in a plant. Lecture 24 – Prestressed Concrete

1.3.1 Concrete cast in situ and precast concrete (ordinary concrete) Cast-in-site concrete is an unhardened state, like ready-mix, and is placed in molds. Ready mixed concrete is proportioned and mixed off the project site. Lecture 1. Introduction to concrete technology

Precast Concrete • On the construction site, precast concrete elements are lifted into place and assembled into structural assemblies in a process similar to that used for structural steel. • Compared to site cast concrete, precast concrete erection is faster and less affected by adverse weather conditions. AD01CTS - ADVANCED CONSTRUCTION TECHNOLOGY AND SERVICES

Visual precast concrete Off the shelf, precast concrete products are simply selected with predetermined properties, usually comprising small units such as paving, posts and blocks. Most large precast elements are made to order, either uniquely bespoke or as part of a system with defined parameters. Visual precast concrete Concrete’s inherent durability, the quality of factory produced elements, together with their speed of erection, makes precast concrete components ideal for many challenging environments. This document offers engineers an awareness of the range of applications for precast concrete available in the civil engineering sector. Precast Concrete in Civil Engineering Key client design requirements for the reservoirs were

monolithic concrete construction and that personnel entry was to be through walk in access secured by watertight doors. MMB invested in the product by developing a ‘standard’ water retaining design in collaboration with the pre-cast concrete supplier and manufacturer, Carlow Precast.

4.4 Robson - Precast Concrete in Reservoir Engineering

However the product standards all refer to EN 13369: Common rules for precast concrete products. And thanks to EN 13369, the product standards are all structured in the same way. The product standards (see table) are written 'by exception' to EN 13369 i.e. they either accept what is in EN 13369 or have mirror clauses that elucidate or supersede those in EN 13369. Standards for precast concrete

The precast concrete is a product created by casting concrete in a reusable mold & then cured in a controlled environment & then it is transported to the construction site for use. It is produced by using molds in a controlled environment and the created products are incredibly uniform in structure and appearance and also strong.
