Electrical issues in European cars can be intimidating. The Hack Mechanic Guide to European Automotive Electrical Systems shows you how to think about electricity in your car and then take on real-world electrical problems. The principles discussed can be applied to most conventional internal-combustion-engined vehicles, with a focus on European cars spanning the past six decades. Drawing on The Hack Mechanic's wisdom and experience, the 38 chapters cover key electrical topics such as battery, starter, alternator, ignition, circuits, and relays. Through a practical and informal approach featuring hundreds of full-color illustrations, author Rob Siegel takes the fear-factor out of projects like making wire repairs, measuring voltage drops, or figuring out if you have a bad fuel pump relay. Essential tools such as multimeters (DVOM), oscilloscopes, and scan tools are discussed, with special attention given to the automotive multimeter needed to troubleshoot many modern sensors. You'll get step-by-step troubleshooting procedures ranging from safely jump starting a battery to diagnosing parasitic current drain and vehicle energy diagnosis. And you'll find detailed testing procedures for most problematic electrical components on your European car such as oxygen sensors, crankshaft and camshaft sensors, wheel speed sensors, fuel pumps, solenoids, and actuators. Reading wiring diagrams and decoding the German DIN standard are also covered. Whether you are a DIY mechanic or a professional technician, The Hack Mechanic Guide to European Automotive Electrical Systems will increase your confidence in tackling automotive electrical problem-solving. This book applies to gasoline and diesel powered internal combustion engine vehicles. Not intended for hybrid or electric vehicles.

The witchfinder stood on the edge of the square at some distance from the burning stake, savouring his moment of triumph. He saw those witches fly. Did the crowds notice? No! Elspeth, her beauty melting before their eyes as if she were a fragrant candle, charmed them. But Matthew saw. He knew Elspeth survived. Wherever she is, he will find her. He will hunt her down, and one will die. Their soul cast down. It is his solemn vow. He will not suffer a witch to live. She rose with the hot swirling smoke, and tumbled through the centuries, from the clear cool air. All Hallows' Eve looms. A special day when the veil lifts and Elspeth has organised a party . . . A bewitchingly dark fairy tale set in the seventeenth and twenty-first centuries, Somerset.

Countless acres of grassland stretch across the American West. Centuries ago, bison roamed the range freely and lived off the grass. By the nineteenth century, herds of cattle grazed the same land. And over time, much of the original grassland was either plowed and planted or trampled to dust, causing the topsoil to dry up and blow away. Today many ranchers have learned to manage their herds of beef cattle so that the damaged range has been transformed into productive grasslands with sparkling clear streams running through them. Montana Ranchers Bob Lee, Ray Marxer, and Tom Milesnick have won numerous awards for their innovative approaches to raising beef cattle and managing the western range. While creating a healthy environment and abundant grasslands for their cattle, they and other ranchers and farmers across the United States have provided quality habitat for wildlife. Author Cris Peterson has visited each ranch to learn firsthand about the philosophies of their owners as well as how the ranches are run.

Photographer Alvis Uptis has captured the sheer beauty and magnificence of the open rangelands, the crystal clear streams, and the mountains that tower over them. Together, this award-winning author-photographer team presents an exciting portrait of a new approach to ranching and environmental conservation in the American West.
