Acute Respiratory Distress Syndrome
Acute respiratory distress syndrome (ARDS) occurs when fluid builds up in the tiny, elastic air sacs (alveoli) in your lungs. The fluid keeps your lungs from

filling with enough air, which means less oxygen reaches your bloodstream. This deprives your organs of the oxygen they need to function.
ARDS - Symptoms and causes - Mayo Clinic
Acute respiratory distress syndrome (ARDS) is a type of respiratory failure characterized by rapid onset of widespread inflammation in the lungs. Symptoms include shortness of breath, rapid breathing, and bluish skin coloration. For those who survive, a decreased quality of life is common.. Causes may include sepsis,

pancreatitis, trauma, pneumonia, and aspiration. Acute respiratory distress syndrome - Wikipedia Acute respiratory distress syndrome (ARDS) is a serious lung condition that causes low blood oxygen. People who develop ARDS are usually ill due to another disease or a major injury. In ARDS, fluid builds up inside the tiny air sacs of the lungs, and surfactant breaks down. Acute Respiratory Distress Syndrome | NHLBI, NIH Acute respiratory distress syndrome causes fluid to leak into your lungs, keeping oxygen from getting to your organs.
