Performing in a high G environment is extremely demanding on the body: pulling G forces blood to the body's extremities, putting the pilot, astronaut or driver at risk of G-Induced Lack of Consciousness (G-LOC). In "Pulling G" Erik Seedhouse describes what it feels like to pull 7 G in a fighter plane and the G pressures on the body when driving a Formula 1 car and many other gravity-defying vehicles. The book relates, for the first time, the effects of G in both hyper-gravity and microgravity. It describes the human response to increased and decreased G and the potentially dangerous effects of high G, with particular reference to dynamic injuries sustained in high acceleration environments. "Pulling G" provides an overview of G-related research and the development of intervention methods to mitigate the effects of increased and reduced G. As well as relating the training required to overcome G-forces on the Formula 1 track, Erik Seedhouse looks at the G forces encountered in such G environments as ejection from an aircraft, launch/re-entry, and zero-G. The book also considers how artificial gravity can be used to prevent bone demineralization and to reduce the effects of de-conditioning in astronauts. Erik Seedhouse is eminently qualified to describe the effects of large accelerations on the body. In addition to being the author of several previously published Springer Praxis books, he has developed astronaut-training protocols and is the training director for Astronauts for Hire (A4H). He is also the Canadian Forces' High Risk Acceleration Training Officer.

Behind the walls of an old farm somewhere in France, several dozen antique classic cars had been neglected for decades, enjoying a kind of 100-year sleep. Surrounded by a profusion of plants and practically forgotten by their owner, no one knew of the collection until, in 1983, permission was granted for it to be photographed. The commission fell to one of Europe's leading photographers, Herbert W. Hesselmann, who promised never to disclose the identity of the owner or location of the collection, and the story made headlines all over the world. This haunting compilation expertly captures the mystery and drama of the vintage car collection of the century, and is accompanied with commentary by Halwart Schrader. Although the collection shown here no longer exists, the untouched patina of these cars still exerts a powerful and mysterious fascination, inviting viewers to explore a forgotten era.

Racing Green is the story of how motorsport science has become smarter and more environmentally friendly, and how these developments on the track are changing the world. Motor racing is the most scientifically demanding sport in the world: a combination of peak physical and mental skill, world-class mechanical nous and technological innovation. Ideas first pioneered during races - from ABS brakes to crash helmets - have been incorporated into car designs around the world to improve racing safety. And cleaner technologies first trialled and improved in modern racing are also informing the designs of everyday vehicles, such as better electric cars and more efficient fuels and tyres. Racing Green is the story of how motorsport science has changed the world, helping it become smarter and more environmentally friendly. From the radical shake-ups of safety in the 1970s through to innovations such as the lithium-ion battery, this book explores the science that has been translated from racing to the road. It looks at the history of motor racing, both its glories and its tragedies, and demonstrates how these moments led to some of the most important modern developments we see in car design today. It explores how motor racing is not only at the cutting edge of modern engineering, but also human psychology and physiology, both of which are integral to creating a winning car and driver. Author Kit Chapman is a lifelong motorsports fan who has previously worked with Virgin Racing's Formula E team to explore the chemistry and material science of their racing cars. With cooperation from his wide range of contacts in the industry, he goes behind the scenes of the current breakthroughs to show where motorsport is likely to take us in

the future, picking up extraordinary tales along the way, such as the maverick designer Warren Mosler, who designed a car that was so fast he wasn't allowed to race it. Racing Green is a mix of travelogue and historical retrospective, combining visits to the experts and discussing the science with retellings of real-life incidents that represent milestones in modern car development. *Living the Supercar Dream (Shmee150)* John Wiley & Sons Describes the legendary car, model stats, and how the Bugati line has made a comeback in the last decade having been revived by Volkswagen with new models.
