Popular Photography Rocky Nook, Inc. Photographic portraits should not be the formal, corporate-style poses of yesteryear, which reveal nothing of the subject's emotion, personality or mood - so believe Sarah Plater and Paul Wilkindon. Theirs is a modern, fresh and vibrant approach that aims to capture a moment in the lifestyle of the person or persons in the picture. This authoritative guide contains clear, concise and jargon-busting text that discusses the essential technical aspects of photography from choosing a camera and equipment to an appreciation of exposure, aperture, metering, shutter speed, depth of field and white balance settings, in addition to how natural light, colour and movement affect a photograph. For the first time ever, world-famous photographer and fashion lighting instructor Frank Doorhof takes you behind the scenes to reveal every step of his model-photography workflow—the same workflow that has made him a hero to photographers around the world thanks to his practical, budget conscious, no-nonsense approach. In this groundbreaking book, Frank starts right at the beginning with how to find models, find great locations, work with backgrounds (you’ll be amazed at his tricks for creating stunning backgrounds for just a few bucks), and work by yourself or with a team (stylist, hair stylist, and makeup artist) to create an

image that will get your photography noticed. Then, it's on to an in-depth look at the lighting setups and looks that made Frank famous (complete with diagrams and detailed explanations). You'll see how Frank lights his images (you'll be shocked at how simple most of his lighting setups are and you'll be able to create these same setups yourself), plus he covers the critical little stuff nobody else is talking about, including: how to calibrate your monitor (and why it's so important); how to use a color target to nail your color every single time; and why (and how) to use a light meter to get consistent, reproducible lighting each and every shoot. Frank also shares his own retouching techniques through step-by-step tutorials, and he takes you from start to finish through a

number of different looks so you can see exactly how it's done, and recreate these same looks yourself. If you've ever wished there was one book that covers it all, the whole process of photographing models from start to finish, not leaving anything out, then this is the book for you.

Getting Things Done Rocky Nook, Inc. World-renowned economist Klaus Schwab, Founder and Executive Chairman of the World Economic Forum, explains that we have an opportunity to shape the fourth industrial revolution, which will fundamentally alter how we live and work. Schwab argues that this revolution is different in scale, scope and complexity from any that have come before. Characterized by a range of new

technologies that are fusing the physical, digital and biological worlds, the developments are affecting all disciplines, economies, industries and governments, and even challenging ideas about what it means to be human. Artificial intelligence is already all around us, from supercomputers, drones and virtual assistants to 3D printing, DNA sequencing, smart thermostats, wearable sensors and microchips smaller than a grain of sand. But this is just the beginning: nanomaterials 200 times stronger than steel and a million times thinner than a strand of hair and the first transplant of a 3D printed liver are already in development. Imagine “smart factories” in which global systems of manufacturing are coordinated virtually, or implantable mobile phones made of

biosynthetic materials. The fourth industrial revolution, says Schwab, is more significant, and its ramifications more profound, than in any prior period of human history. He outlines the key technologies driving this revolution and discusses the major impacts expected on government, business, civil society and individuals. Schwab also offers bold ideas on how to harness these changes and shape a better future—one in which technology empowers people rather than replaces them; progress serves society rather than disrupts it; and in which innovators respect moral and ethical boundaries rather than cross them. We all have the opportunity to contribute to developing new frameworks that advance progress.

Review via email from Earle Holder, award winning Mastering Engineer at HDQTRZ Mastering Studios, Mastering Engineer for Public Enemy, and creator of the 'Har-Bal' Harmonic Equaliser:
"Hello David I have always believed that one is never too old to learn something new. I purchased your material because it appeared that you have a real passion for your craft as do I. I thought your tutorials were well written and easily understood. The area that I read where you stated that you were mastering a project for an individual over a three year period was priceless. I was easily able to relate to your dilemma of constantly improving your craft and the need to go back and redo the previous masters because you were constantly

learning and becoming more proficient. There is plenty of business to go around so I support my fellow mastering engineers who appear to be honorable. Both of your books were a breath of fresh air and I will be sure to tell others who are getting started in this wonderful field to purchase your books. Cheers" Earle Holder Chief Mastering Engineer HDQTRZ Mastering Studios Some reviews via social media: Jacob Longoria via Twitter: "Your information has taken me from trying to figure it out, to getting it done with repeat clients. Thank you!" Christian Ghahremanian via FaceBook: "Hi David! Ive already purchased your second book, thx. I just write to you to say thanks! I really love dynamic stuff and I admire Bob Katzs effort for his K-Measurement - but I always had

problems to hold the pressure at 0... no matter which K-standard I were trying to use... After reading your books and refreshing all the stuff Ive already learnt years ago, I finally dont have a problem anymore to master considering Ks standard, and my works sound great now!.. Thanks David that youve written books like this...they are really educating and well written - good job! BR Christian Ghahremanian" And many more great reviews on the author's website. Message from the author: Most people don't have access to racks of high end mastering equipment, you're probably one of them. Websites like YouTube and SoundCloud are fuelling an explosion in the amount of DIY producers uploading their music to the internet. This is great for audio mastering engineers as it

means there's plenty of work to go around, but some artists struggle to afford to pay for professional mastering every time they want to upload a new track for their fans to listen to. This book explains and demonstrates how to achieve a commercial sounding finish using software found in any typical home/project studio. You may wonder if that's possible but I know it can be done. I started an audio mastering business using nothing more than standard plugins and clever techniques. Customers loved my work and kept coming back. Over time as my business built up, I was able to buy more expensive equipment, but I still stick to the original techniques that I know will get a commercial sound, no matter what tools are used. Here's why: About the

first 90% of getting that commercial sound is technique. The final 10% is the tools you use. So before you go and buy the most expensive compressor and EQ, it's a lot more financially worthwhile to instead invest some 'time' rather than money into learning the techniques used to get a commercial sounding finish. It can be done with what you already possess. Is this book for you?

1. Containing hot topics like how to get it REALLY loud and still sound spacious and dynamic.
2. Reveals how a mix should sound to produce a commercial volume and radio quality master.
3. Explains how psychoacoustic manipulation can be used to spread sound all around the listener.
4. Provides you with everything you need to know to get your final sound as big as your fattest tune in your iTunes

library - never have to pay for mastering again. Pro Audio Mastering Made Easy is a product of David S Eley Ltd."

Noted technical analyst John Person outlines a comprehensive method to pinpointing today's best trading opportunities. The economy and stock market are heavily influenced by seasonal factors. For example, a strong holiday buying season tends to be bullish for retail stocks or rising energy costs hurt airline profitability. Awareness of seasonal trends in both the economy and stock market can put you in a better position to profit from sectors and stocks that are likely to outperform the overall market. And technical tools can then be used to confirm emerging trends and

time entries into these stocks and sectors. Mastering the Stock Market provides authoritative insights into a method for trading stocks based on seasonal trends, sector analysis, and market timing. Taking a top-down approach, the book explains how seasonal supply/demand forces impact commodities and different sectors of the stock market. After learning how to identify stock market sectors and commodity ETFs that are ripe for a big move, you'll quickly discover how to use technical analysis to gauge the strength of the sector or commodity and then identify the strongest stocks and ETFs to trade. Along the way, you'll also learn how to use the author's own indicators, Persons Pivots, to identify support/resistance areas and pinpoint

optimal entry and exit points. When photographing people, you can have a great composition, perfect light, and the right camera settings, but if your subject doesn't look right—if the pose is off—the shot will not be a keeper. Posing is truly a crucial skill that photographers need to have in order to create great photographs. If you're looking to improve your ability to pose your

subjects—whether they're men, women, couples, or groups—best-selling author and photographer Lindsay Adler's *The Photographer's Guide to Posing: Techniques to Flatter Everyone* is the perfect resource for you. In the first half of *The Photographer's Guide to Posing*, Lindsay discusses how the camera sees, and thus how camera angle, lens choice, and perspective all affect the appearance of your subject. Lindsay then covers things that ruin a pose—such as placement of the hands, and your subject's expression and posture. Next, Lindsay dives into “posing essentials,” outlining her approach to start with a “base pose,” then build on that to create endless posing opportunities. She also discusses posing the face—with specific sections

dedicated to the chin, jaw, eyes, and forehead—as well as posing hands. In the second half of the book, Lindsay dedicates entire chapters to posing specific subject matter: women, men, couples, curvy women, families and small groups, and large groups. In each chapter, Lindsay addresses that subject matter’s specific challenges, provides “go-to poses” you can always use, and covers how to train the eye to determine the best pose for your subject(s).

Lindsay also teaches you how to analyze a pose so that you can create endless posing opportunities and continuously improve your work.
