Concepts of Biology is designed for the single-semester introduction to biology course for non-

science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why biology is relevant to their everyday lives. For these reasons, *Concepts of Biology* is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand. We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most syllabi for this course. A strength of *Concepts of Biology* is that instructors can customize the book, adapting it to the approach that works best in their classroom. *Concepts of Biology* also includes an innovative art program that incorporates critical thinking and clicker questions to help students understand--and apply--key concepts.

In recent years there has been a marked increase in both the volume and diversity of sexual imagery and talk on television, condemned by some as a 'rising tide of filth', celebrated by others as a 'liberation' from the regulations of the past. Television and Sexuality questions both these responses through an examination of television's multiple channels and genres, and the wide range of sexual information and pleasures they provide. The book explores the way that sexual

citizenship and sexual consumerism have been defined in the digital era to reveal the underlying assumptions held by the television industry about the tastes and sexual identities of its diverse audiences. It draws on the work of key thinkers in cultural and media studies, as well as feminist and queer theory, to interrogate the political and cultural significance of these developments. With topics including the regulation of taste and decency, sex scandals in the news, the biology of sex in science programmes, and gay, lesbian and postfeminist identities in 'quality' drama, this book is key reading for students in cultural and media studies and gender studies.
