Renate Motzer introduces the world of fractions and connects them with decimal numbers. She clearly shows that fractions can be understood as parts of a whole, but also as ratios of two quantities. The author clearly shows why roots cannot be exactly indicated by fractions, how to find good approximations and why an unusual addition of fractions can lead to paradoxical results. Furthermore, she explains the use of fractions in percentage and probability calculations in a practical way and finally discusses different ways of forming mean values. This Springer essential is a translation of the original German 1st edition essentials, Brüche, Verhältnisse und Wurzeln by Renate Motzer, published by Springer Fachmedien Wiesbaden GmbH, part of Springer Nature in 2018. The translation was done with the help of artificial intelligence (machine translation by the service DeepL.com). A subsequent human revision was done primarily in terms of content, so that the book will read stylistically differently from a conventional translation. Springer Nature works continuously to further the development of tools for the production of books and on the related technologies to support the authors.

**Ratios and Percents** Contemporary's Foundations

This book presents teacher-written cases relating stories, insights, and experiences about the teaching of fractions, decimals, ratios, and percents. The cases were written to stimulate colleagues to examine their own practice, to think hard about the mathematics they teach and would like to teach, and to initiate inquiries and discussions that lead teachers to a deeper understanding of student thinking and the kinds of strategies that would promote further learning. The typical case reports a problem, dilemma, or crisis of mathematics instruction that has occurred in a teacher's class and describes the events that led up to the problem, the classroom context in which it occurred, and the ways in which the teacher attempted to set matters on course. Also included is the teacher's own analysis of the situation and the emotional impact of the problem. Major section headings in the book are: "Inside Student Thoughts," "Making Sense or Memorizing Rules," "Teaching as Questioning," "Reflecting," "Manipulatives Aren't Magic," "What Next," "Connections," and "This Wasn't My Plan." Contains 38 references. (MKR)
