Description.

The Chemical and Process Plant Commissioning Handbook, winner of the 2012 Basil Brennan Medal from the Institution of Chemical Engineers, is a guide to converting a newly constructed plant or equipment into a fully integrated and operational process unit. Good commissioning is based on a disciplined, systematic and proven methodology and approach that achieve results in the

safest, most efficient, cost effective and timely manner. During a manufacturing plant commissioning, process conditions are	established and process fluids (the actual raw materials to be used for routine production) are introduced into the system. Initial	Operation, or the first production run, aims to determine if the production process manufactures output that meets design requirements.
