Joe Neil MacNeil holds in his memory a wealth of Gaelic folktales, learned in his youth in Cape Breton. For over a decade, he has told his tales to John Shaw, a specialist in Celtic folklore and fluent speaker of Gaelic. Shaw has recorded, transcribed, edited, and translated the tales and folklore into English. This rich and entertaining collection is the result of their collaboration.

Folktales, anecdotes, proverbs, expressions, rhymes, superstitions, and games are presented in translation and, in the cloth edition, in the original as well. All variations of the genre are represented: a fragment from the Ulster cycle, some items from the Fenian cycle, hero and wonder tales, fairy and witch lore, romantic tales, tales of the exemplum type, tales of cleverness, "numbskull" stories, animal tales, and tall tales.

Fluid Mechanics and Machinery features exhaustive coverage of the essential concepts of the mechanics of fluids, both static and dynamic. It also provides an overview of the design and operation of various hydraulic machines such as pumps and turbines. The book also features numerous solved examples in order to help students grasp the fundamentals and apply them to real-life situations. Beginning with discussion of the properties of fluids, Fluid Mechanics and Machinery gives detailed information on topics such as fluid pressure and its measurement, principles of buoyancy and flotation, and fluid statics, kinematics, and dynamics. It then moves on to discuss dimensional analysis and flow of fluids through orifices, mouthpieces, and pipes, and over notches and weirs. More advanced topics such as vortex flow, impact of jets, and flow of compressible fluids are then dealt with

in separate chapters. Finally, a thorough overview of the design and operation of various fluid machines such as pumps and turbines explains the practical applications of fluid forces to students.

Lessons Learned and the Path Forward

Klein finds that a trend toward redefining women's lives has been present since the turn of the century. She focuses on two compelling questions: What are the common concerns that mobilize women, and how do these concerns shape political activism? This study combs a wealth of public opinion surveys and census data to discover why women have become politically active and what it means to public policy.

What does political representation in the European Union look like? This volume argues that the transformation of representation in the EU is characterized by diversification processes, albeit with an uncertain ability to re-configure the link between representation and democracy.

This concise and practical handbook covers the basics of pathophysiology, diagnosis, interdisciplinary surgical management, prevention and rehabilitation of patients with deep sternal wound infections and sternal osteomyelitis. All relevant aspects and surgical procedures are explained in an easily understandable way. Additionally special approaches and preventive measures are highlighted with regard to the perioperative handling as well as the rehabilitation possibilities. Through concise texts with numerous illustrations, the book is ideal for the practice and as a supplement to further studies. This book is suitable for all specialists who are involved into the treatment and diagnosis of sternal wound infections, particularly cardio-thoracic, thoracic, plastic, vascular surgeons, cardiologists, radiologists, and rehabilitation physicians.

Lumberman Larry Gorman was no respecter of borders — nor of anything else, it seems. From the time he was a young man growing up on Prince Edward Island until his death in Brewer, Maine in 1917. Larry Gorman composed satirical songs about friend and foe, relative and stranger, without fear or favour. This new edition of Sandy Ives's celebrated book features more than 70 of Gorman's songs, 29 with music.

This book discusses central concepts and theories in cell biology

from the ancient past to the 21st century, based on the premise that understanding the works of scientists like Hooke, Hofmeister, Caspary, Strasburger, Sachs, Schleiden, Schwann, Mendel, Nemeč, McClintock, etc. in the context of the latest advances in plant cell biology will help provide valuable new insights. Plants have been an object of study since the roots of the Greek, Chinese and Indian cultures. Since the term "cell" was first coined by Robert Hooke, 350 years ago in *Micrographia*, the study of plant cell biology has moved ahead at a tremendous pace. The field of cell biology owes its genesis to physics, which through microscopy has been a vital source for piquing scientists' interest in the biology of the cell. Today, with the technical advances we have made in the field of optics, it is even possible to observe life on a nanoscale. From Hooke's observations of cells and his inadvertent discovery of the cell wall, we have since moved forward to engineering plants with modified cell walls. Studies on the chloroplast have also gone from Julius von Sachs' experiments with chloroplast, to using chloroplast engineering to deliver higher crop yields. Similarly, advances in fluorescent microscopy have made it far easier to observe organelles like chloroplast (once studied by Sachs) or actin (observed by Bohumil Nemeč). If physics in the form of cell biology has been responsible for one half of this historical development, biochemistry has surely been the other.
