*Basic Finance: An Introduction to Financial Institutions, Investments, and Management* Pearson Higher Education AU  
The core concepts and tools students need to make informed investment decisions. Fundamentals of Investing helps students make informed investment decisions in their personal and professional lives by providing a solid foundation of core concepts and tools. Gitman/Joehnk/Smart use practical, hands-on applications to introduce the topics and techniques used by both personal investors and money managers. The authors integrate a consistent framework based on learning goals to keep students focused on what is most important in each chapter. Students leave the course with the necessary information for developing, implementing, and monitoring a successful investment program. The eleventh edition addresses the current financial crisis and the impact it has made on the markets.

### **Fundamentals of Financial Management, Concise Edition** Penguin

The authors wrote this text in response to the absence in the market of a text that would meet the needs of finance majors, but would still be accessible to all students. In many cases, as many as 80% of undergraduate corporate finance courses are filled with non-finance majors who are either intimidated by this course or who don't understand why they have to take the class (or both!). This text addresses the challenges all professors face: keeping students at varying degrees of ability and interest motivated and invested in the material.

### Financial Management Cengage Learning

Valuation: The Art and Science of Corporate Investment Decisions is the first textbook to offer an integrated approach to both project and enterprise valuation. The text goes beyond standard DCF analysis by including additional valuation methods commonly used in practice, such as comparables, simulations (including Crystal Ball®), and real options. In addition, discussions are considered against the backdrop of other quantitative and qualitative corporate issues that affect valuation, including:

Organizational structure and incentives: The text examines how the corporate decision-making process as well as the incentive system can positively or negatively affect valuation. Strategic analysis and real options: Real options are presented as a tool to complement executive intuition and provide a more disciplined evaluation process that focuses on creating value. Risk management and hedging: Risks associated with interest rate fluctuations, variable foreign exchange rates, and fluctuating commodity prices can create hedging and risk management opportunities that affect value. Financing: The ability to secure attractive financing terms is an important source of value, and readers should understand how financing opportunities influence the value of an investment opportunity. Irrational behavior: The text examines how limitations in cognitive abilities and biases in assessing abilities of key players can affect valuation.

Theory and Practice Cengage Learning

Foundations of Airline Finance: Methodology and Practice is a textbook that comprehensively covers, at a basic level, all aspects of the subject, bringing together many of the numerous and informative articles and institutional developments that have characterized the field of airline finance in the previous two decades. In the early chapters, the reader is introduced to the elementary theoretical foundations that underpin the role of

finance in the airline industry. Critical topics, such as the time value of money, the notion of risk and return, and the complex nature of costs (fixed, semi-fixed, variable, and marginal) are discussed and illustrated with concrete examples. This is followed by an in-depth presentation of the role of accounting in airlines. Ratio analysis is used to further analyze airline financial statements. Airline industry specific metrics, such as cost per available seat mile (CASM) and revenue per revenue passenger mile (RRPM), are covered. The role of capital and asset management is then explained in the following chapters. The final chapters of the text present some important practical applications of the theoretical ideas presented earlier; these applications include hedging, the buy versus lease decision for aircraft and the question of the valuation of assets (mainly aircraft). Moreover, specific methods for actually calculating internal valuation are presented and evaluated. Foundations of Airline Finance: Methodology and Practice will be of greatest value to students who are contemplating entering financial management in the air transportation industry; however, the text will also serve as an accessible and comprehensive reference for industry professionals.
