Cost accounting provides key data to managers for planning and controlling, as well as costing products, services, even customers. Cost Accounting, 16e focuses on how this discipline would help managers make better decisions, as cost accountants are increasingly becoming integral members of company's decision-making teams. In order to emphasize this prominence in decision making, the authors have used the 'different costs for different purposes' theme throughout this book. This revised and updated fifth edition of Accounting for Managers builds on the international success of the previous editions in explaining how accounting is used by non-financial managers.

Emphasizing the interpretation rather than the construction of accounting information, Accounting for Managers encourages a critical, rather than an unthinking acceptance of accounting techniques. Whilst immensely valuable

for planning, decision-making and control, users of accounting information need to recognize the assumptions behind, and the limitations of particular accounting techniques. As in the previous editions, the book links theory with practical examples and case studies drawn from real business situations across a wide range of manufacturing, retail and service industries.

Winner of the 2003 Shingo Prize! Reorganizing work processes into cells has helped many organizations streamline operations, shorten lead times, increase quality, and lower costs. Cellular manufacturing is a powerful concept that is simple to understand; however, its ultimate success depends on deciding where cells fit into your organization, and then applying the know-how to design, implement and

operate them. Reorganizing the Factory presents a thoroughly researched and comprehensive "life cycle" approach to competing through cellular work organizations. It takes you from the basic cell concept and its benefits through the process of justifying, designing, implementing, operating, and improving this new type of work organization in offices and on the factory floor. The book discusses many important technical dimensions, such as factory analysis, cell design, planning and control systems, and principles for lead time and inventory reduction. However, unique to the literature, it also covers in depth the numerous managerial issues that accompany organizing work into cells. In most implementations, performance

measurement, compensation, education and training, employee involvement, and change management are critically important. These issues are often overlooked in the planning process, yet they can occupy more of the implementation time than do the technical aspects of cells. Includes: Why do cells improve lead time, quality, and cost? Planning for cell implementation Justifying the move to cells, strategically and economically Designing efficient manufacturing and office cells Selecting and training cell employees Compensation system for cell employees Performance and cost measurement Planning and control of materials and capacity Managing the change to cells Problems in designing, implementing, and operating cells Improving and

adapting existing cells Structured frameworks and checklists to help

analysis and decision-making Numerous examples of cells in various industries
