Soccer stadiums,  
airports, theaters,  
museums - it falls to  
very few architects to  
tackle spectacular

building tasks like  
these. The everyday  
work of most architects  
is more often focused  
on "manageable"  
projects like the  
renovation,  
remodeling, or  
rebuilding of single-  
and multi-family  
houses, schools, and  
offices. Whatever the  
nature of the building  
task, interior  
construction is always  
a significant design  
and qualitative  
challenge that calls for  
highly detailed  
technical expertise.  
After all, it affects the  
realm that will be  
brought to life and  
utilized by the user  
when the task is  
finished, and whose  
aesthetic and  
functional  
serviceability will be  
put to the test each  
and every day. The  
Interior Construction

the Roof Construction Manual is a comprehensive reference work on the construction of pitched roofs, containing over 1800 plans and 220 photographs. Thirteen fundamental roof types and the relevant materials including thatch, wood, slate, tile, concrete, fibrous cement, bitumen, glass, metal, membranes, and synthetic materials are documented in detail.

Essential topics such as ventilation, vapour and wind seals, insulation and drainage, renovation and energy conservation are examined. As with all the Construction Manuals, some 38 built examples illustrate the theoretical details, paying particular attention to important features such as the ridge, hip, eaves, roof valley, verge, and penetration. A compact presentation of the load-bearing physics and structures as well as current norms and standards make this volume an indispensable standard work for all architects and engineers.
