BARRON HERRERA

Field Trip Guide Books

FrancoAngeli

In this book, Christina Zuber outlines a theory of ideational policy stabilization to explain stable policy choices despite changing incentives. Historical

legacies are frequently invoked in popular and academic accounts of the politics of migration, but the mechanisms of transmission are left underspecified. This work contributes to research on migration and to theories of public policy by arguing that the missing link between past events and present choices is ideational: initially a

historical constellation of interests leads actors to defend policy ideas that match the historical environment, but over time, ideas can detach themselves from interests and stabilize into societal dispositions (shared values and identities). This occurs if elites build a discursive consensus around a policy idea, and if bureaucrats develop

concomitant policy practices. The book's empirical section analyses ideational stabilization in Catalonia (Spain), which takes an inclusive approach to immigration, and in South Tyrol (Italy), where immigration is framed as a threat. The comparison shows that these differences can be explained by the political economy of historical industrialization and internal migration. Catalans were in the driving seat of industrialization, receiving unskilled migrant workers

from the rest of Spain to boost their own economy. South Tyroleans, on the other hand, were in the passenger seat, perceiving incoming Italians as colonizers. Over time, socioeconomic conditions changed, and internal migration was replaced with international migration. Yet with historical ideas having stabilized into dispositions, political and administrative elites continued to understand immigration through the now-obsolete perspective of economic opportunity

in Catalonia and ethnic competition in South Tyrol. Transformations in Governance is a major academic book series from Oxford University Press. It is designed to accommodate the impressive growth of research in comparative politics, international relations, public policy, federalism, and environmental and urban studies concerned with the dispersion of authority from central states to supranational institutions, subnational governments, and public-private

networks. It brings together work that advances our understanding of the organization, causes, and consequences of multilevel and complex governance. The series is selective, containing annually a small number of books of exceptionally high quality by leading and emerging scholars. The series is edited by Liesbet Hooghe and Gary Marks of the University of North Carolina, Chapel Hill, and Walter Mattli of the University of Oxford.

Annali di botanica

University of Chicago Press
In 1650, Archbishop James Ussher of Armagh joined the long-running theological debate on the age of the earth by famously announcing that creation had occurred on October 23, 4004 B.C. Although widely challenged during the Enlightenment, this belief in a six-thousand-year-old planet was only laid to rest during a revolution of discovery in the late eighteenth and early nineteenth centuries. In this relatively brief period,

geologists reconstructed the immensely long history of the earth-and the relatively recent arrival of human life. Highlighting a discovery that radically altered existing perceptions of a human's place in the universe as much as the theories of Copernicus, Darwin, and Freud did, *Bursting the Limits of Time* is a herculean effort by one of the world's foremost experts on the history of geology and paleontology to sketch this historicization of the natural world in the age of

revolution. Addressing this intellectual revolution for the first time, Rudwick examines the ideas and practices of earth scientists throughout the Western world to show how the story of what we now call "deep time" was pieced together. He explores who was responsible for the discovery of the earth's history, refutes the concept of a rift between science and religion in dating the earth, and details how the study of the history of the earth helped define a new

branch of science called geology. Rooting his analysis in a detailed study of primary sources, Rudwick emphasizes the lasting importance of field- and museum-based research of the eighteenth and nineteenth centuries. *Bursting the Limits of Time*, the culmination of more than three decades of research, is the first detailed account of this monumental phase in the history of science.

Oltre i distretti

FrancoAngeli
In the late eighteenth and

early nineteenth centuries, scientists reconstructed the immensely long history of the earth—and the relatively recent arrival of human life. The geologists of the period, many of whom were devout believers, agreed about this vast timescale. But despite this apparent harmony between geology and Genesis, these scientists still debated a great many questions: Had the earth cooled from its origin as a fiery ball in space, or had it always been the same

kind of place as it is now? Was prehuman life marked by mass extinctions, or had fauna and flora changed slowly over time? The first detailed account of the reconstruction of prehuman geohistory, Martin J. S. Rudwick's *Worlds Before Adam* picks up where his celebrated *Bursting the Limits of Time* leaves off. Here, Rudwick takes readers from the post-Napoleonic Restoration in Europe to the early years of Britain's Victorian age, chronicling the staggering discoveries

geologists made during the period: the unearthing of the first dinosaur fossils, the glacial theory of the last ice age, and the meaning of igneous rocks, among others. Ultimately, Rudwick reveals geology to be the first of the sciences to investigate the historical dimension of nature, a model that Charles Darwin used in developing his evolutionary theory. Featuring an international cast of colorful characters, with Georges Cuvier and Charles Lyell playing major roles and Darwin

appearing as a young geologist, *Worlds Before Adam* is a worthy successor to Rudwick's magisterial first volume. Completing the highly readable narrative of one of the most momentous changes in human understanding of our place in the natural world, *Worlds Before Adam* is a capstone to the career of one of the world's leading historians of science.

Culture in Italy 2012
Oxford University Press
This volume contains peer-reviewed papers from the Fourth World

Landslide Forum organized by the International Consortium on Landslides (ICL), the Global Promotion Committee of the International Programme on Landslides (IPL), University of Ljubljana (UL) and Geological Survey of Slovenia in Ljubljana, Slovenia from May 29 to June 2, 2017. The complete collection of papers from the Forum is published in five full-color volumes. This fifth volume contains the following: • Landslide Interactions with the Built

Environment • Landslides in Natural Environment • Landslides and Water • Landslides as Environmental Change Proxies: Looking at the Past • Student Papers Prof. Matjaž Mikoš is the Forum Chair of the Fourth World Landslide Forum. He is the Vice President of International Consortium on Landslides and President of the Slovenian National Platform for Disaster Risk Reduction. Assoc. Prof. Vít Vilímek is the editor of Volume 5. He is member of the Evaluation committee of

International Consortium on Landslides and head of the Czech Geomorphological Association. Prof. Yueping Yin is the President of the International Consortium on Landslides and the Chairman of the Committee of Geo-Hazards Prevention of China, and the Chief Geologist of Geo-Hazard Emergency Technology, Ministry of Land and Resources, P.R. China. Prof. Kyoji Sassa is the Founding President of the International Consortium on Landslides (ICL). He is

Executive Director of ICL and the Editor-in-Chief of International Journal “Landslides” since its foundation in 2004. IPL (International Programme on Landslides) is a programme of the ICL. The programme is managed by the IPL Global Promotion Committee including ICL and ICL supporting organizations, UNESCO, WMO, FAO, UNISDR, UNU, ICSU, WFEO, IUGS and IUGG. The IPL contributes to the United Nations International Strategy for Disaster Reduction and

the ISDR-ICL Sendai Partnerships 2015–2025. Special Report of the Commissioner of Labor Clarendon Press Campania e Basilicata 1:200.000 Special Report of the Commissioner of Labor Campania. Basilicata 1:200.000 Camminare in Italia. 60 escursioni da non perdere EDT srl Slope Stability Engineering Routledge This book explores the complex relationship between production, trade, and connectivity in pre-Roman Italy, confronting established

ideas about the connections between people, objects, and ideas, and highlighting how social change and community formation are rooted in individual interactions. The volume engages with, and builds upon, recent paradigm shifts in the archaeology and history of the ancient Mediterranean which have centred the social and economic processes that produce communities. It utilises a series of case studies, encompassing the production, trade, and movement of objects and

people, to explore new models for how production is organised and the recursive relationship which exists between the cultural and economic spheres of human society. The contributions address issues of agency and production at multiple scales of analysis, from larger theoretical discussions of trade and identity across different regions to context-specific explorations of production techniques and the distribution of material culture across the Italian

peninsula. Production, Trade, and Connectivity in Pre-Roman Italy is intended for students and scholars interested in the archaeology and history of pre-Roman and early Republican Italy, but especially production, trade, community formation, and identity. Those interested in issues of cultural interaction and material change in the ancient Mediterranean world will find useful comparative examples and methodological approaches throughout. *Neglected and Under-*

The Italian-annotated bibliography on tunas, tuna-like and billfish species is a sort of unicum, because for the very first time, it provides annotation in English for all papers published by Italian authors over the centuries in various languages. Taking into account that these

species are an essential component of the Italian and Mediterranean culture, thousands of authors published a very high amount of papers since historical times, on various themes and subjects. These large fish species are nowadays not only essential elements of the marine trophic chain, but also important components of human seafood and the related fishery economy. This book makes all these papers internationally available for all scientists, helping them in their

research activities and the annotations facilitate the searching work by species and keywords.

This book focuses on methods and models in classification and data analysis and presents real-world applications at the interface with data science. Numerous topics are covered, ranging from statistical inference and modelling to clustering and factorial methods, and from directional data analysis to time series analysis and small area estimation. The applications deal with new developments in a variety of fields, including medicine, finance, engineering, marketing,

and cyber risk. The contents comprise selected and peer-reviewed contributions presented at the 13th Scientific Meeting of the Classification and Data Analysis Group of the Italian Statistical Society, CLADAG 2021, held (online) in Florence, Italy, on September 9–11, 2021. CLADAG promotes advanced methodological research in multivariate statistics with a special focus on data analysis and classification, and supports the exchange and dissemination of

ideas, methodological concepts, numerical methods, algorithms, and computational and applied results at the interface between classification and data science.

Society and Politics in the Age of the Risorgimento
Homeless Book
Sustainable development and rural policies have pursued strategies where farming has been often regarded as a factor deteriorating the ecosystem. But the current economic, social and environmental

problems of the Earth probably call for examples of a positive integration between human society and nature. This research work presents more than a hundred case studies where the historical relationships between man and nature have generated, not deterioration, but cultural, environmental, social and economic values. The results show that is not only the economic face of globalization that is negatively affecting the landscape, but also inappropriate

environmental policies. The CBD-UNESCO program on biocultural diversity, the FAO Globally Important Agricultural Heritage Systems and several projects of the International Union of Forest Research Organizations, as well as European rural policies acknowledge the importance of cultural values associated to landscape. This research intends to support these efforts.

This collection of papers covers a wide range of relevant issues and aspects of slope stability engineering from both practical and scientific points of view from the Proceedings of the International Symposium on Slope Stability Engineering : Is--Shikoku'99 : Matsuyama, Shikoku, Japan, 8-11 November, 1999. Campania. Basilicata 1:200.000 Springer Nature

The object of this book is to describe the institutional modifications

of the Italian form of state more than ten years after the review of Title V - Part II of the Italian Constitution - for an audience that goes well beyond the Italian national boundaries. The fifteen essays that make up the book discuss the birth and evolution of the Italian regionalism (including those regions with Special Statutes) as well as reforms of 1999-2001. A particular attention is devoted to the role of autonomy in defining regional statutes, regional forms of

government, and regulatory and administrative powers. These are subjects on which there is by now an abundant body of constitutional case law, which is extensively referred to by the chapters. The role of the regions vis-à-vis the local bodies and vis-à-vis the European and international order is also discussed, as the right to negotiate with foreign powers has now been conferred on the regions. Lastly, the volume presents contributions on

regional finance and on the new law on fiscal federalism, as well as on regional powers in the area of health and welfare.

The five-volume set LNCS 6782 - 6786 constitutes

the refereed proceedings of the International Conference on Computational Science and Its Applications, ICCSA 2011, held in Santander, Spain, in June 2011. The five volumes contain papers presenting a wealth of original research results in the field of computational science, from foundational issues in computer science and mathematics to advanced applications in virtually all sciences making use of computational techniques. The topics of the fully

refereed papers are structured according to the five major conference themes: geographical analysis, urban modeling, spatial statistics; cities, technologies and planning; computational geometry and applications; computer aided modeling, simulation, and analysis; and mobile communications.

Worlds Before Adam IGI Global

The sixth volume in the Institute of Classical Archaeology's series on the rural countryside

(chora) of Metaponto is a study of the Greek settlement at Sant'Angelo Vecchio. Located on a slope overlooking the Basento River, the site illustrates the extraordinary variety of settlements and uses of the territory from prehistory through the current day. Excavators brought to light a Late Archaic farmhouse, evidence of a sanctuary near a spring, and a cluster of eight burials of the mid-fifth century BC, but the most impressive remains belong to a

production area with kilns. Active in the Hellenistic, Late Republican, and Early Imperial periods, these kilns illuminate important and lesser-known features of production in the chora of a Greek city and also chronicle the occupation of the territory in these periods. The thorough, diachronic presentation of the evidence from Sant'Angelo Vecchio is complemented by specialist studies on the environment, landscape, and artifacts, which date from prehistory to the

post-medieval period. Significantly, the evidence spans the range of Greek site types (farmhouse, necropolis, sanctuary, and production center) as well as the Greek dates (from the Archaic to Early Imperial periods) highlighted during ICA's survey of the Metapontine chora. In this regard, Chora 6 enhances the four volumes of *The Chora of Metaponto 3: Archaeological Field Survey—Bradano to Basento* and provides further insight into how sites in the chora

interacted throughout its history. *Camminare in Italia. 60 escursioni da non perdere* Springer
 I testi che si vanno a pubblicare oggi nel merito della riflessione sui distretti industriali, presentano un qualcosa di paradossale. Si parla di un qualcosa che con la crisi partita dal 2006-2007 sembra ormai del tutto esaurito - ed in larga parte ciò è avvenuto - ma che deve essere riproposto come tema di riflessione e di nuova progettazione, perché

quei distretti hanno lasciato tracce così significative da mettere subito in evidenza le potenzialità innovative che si potevano aprire nel quadro di una diversa visione dello sviluppo locale. *Advancing Culture of Living with Landslides* Springer
 In a period of deep economic, social, and political transformation, regional disparities seem to be particularly resistant to change. The emergence of a global economy, the shift in

production methods, and the greater mobility of capital, labour, and raw materials have not brought about a radical reshuffling of the prevailing regional disparities. There is a greater concentration of economic activity in core areas and very few peripheral regions are taking advantage of the process of global restructuring. The Dynamics of Regional Growth in Europe looks for the reasons behind this persistence in the social, political, and institutional

arrangements of a large set of European regions, by trying to relate two scientific approaches concerned with regional economic performance, which share very little in common: the literature on socio-economic restructuring and structural change, and neoclassical and endogenous growth theories. OXFORD GEOGRAPHICAL AND ENVIRONMENTAL STUDIES AIMS TO PUBLISH THE BEST ORIGINAL RESEARCH STUDIES IN THE RELATED FIELDS OF

GEOGRAPHY AND ENVIRONMENTAL STUDIES. IT'S SCOPE IS INTERNATIONAL, PRESENTING A BROAD AND DIVERSE RANGE OF SCHOLARLY APPROACHES FROM ACROSS THE WORLD.
