Ratti and McWaters wrote this series with the primary goal of preparing students to be successful in calculus. Having taught both calculus and precalculus, the authors saw firsthand where students would struggle, where they needed help making connections, and what material they needed in order to succeed in calculus. Their experience in the classroom shows in each chapter, where they emphasize conceptual development, real-life applications, and extensive exercises to encourage a deeper understanding. *Precalculus: A Unit Circle Approach*, Second Edition, offers the best of both worlds: rigorous topics and a friendly, "teacherly" tone. Note: This is the standalone book, if you want the book/access card please order the ISBN below: 0321900472 / 9780321900470 *Precalculus: a Unit Circle Approach plus MyMathLab with Pearson eText -- Access Card Package* Package consists of 0321431308 / 9780321431301 *MyMathLab/MyStatLab -- Glue-in Access Card* 0321654064 / 9780321654069 *MyMathLab Inside Star Sticker* 032182539X / 9780321825391 *Precalculus: A Unit Circle Approach Functions and Graphs* Holt Rinehart & Winston *Calculus for AP* is designed specifically for the AP Curriculum Framework and exam. For the first time, Ron Larson has partnered with an AP Calculus teacher to develop a program that meets the needs of the AP Calculus course while helping students develop mathematical knowledge conceptually. With a clear focus on course demands, *Calculus for AP* introduces content in the sequence most preferred by AP Calculus teachers, resulting in more complete content coverage. *Precalculus* McGraw-Hill Education

"The text is suitable for a typical introductory algebra course, and was developed to be used flexibly. While the breadth of topics may go beyond what an instructor would cover, the modular approach and the richness of content ensures that the book meets the needs of a variety of programs."--Page 1.

The main objective of this Research Topic is to determine the conditions that place students at risk of school failure, identifying student and context variables. In spite of the fact that there is currently little doubt about how one learns and how to teach, in some countries of the "developed world," there is still there is a high rate of school failure. Although the term "school failure" is a very complex construct, insofar as its causes, consequences, and development, from the field of educational psychology, the construct "student engagement" has recently gained special interest in an attempt to deal with the serious problem of school failure. School engagement builds on the anatomy of the students' involvement in school and describes their feelings, behaviors, and thoughts about their school experiences. So, engagement is an important component of students' school experience, with a close relationship to achievement and school failure. Children who self-set academic goals, attend school regularly and on time, behave well in class, complete their homework, and study at home are likely to interact adequately with the school social and physical environments and perform well in school. In contrast, children who miss school are more likely to display disruptive behaviors in class, miss homework frequently, exhibit violent behaviors on the playground, fail subjects, be retained and, if the behaviors persist, quit school. Moreover, engagement should also be considered as an important school outcome, eliciting more or less supportive reactions from educators. For example, children who display school-engaged behaviors are likely to receive motivational and instructional support from their teachers. The opposite may also be true. But

what makes student engage more or less? The relevant literature indicates that personal variables (e.g., sensory, motor, neurodevelopmental, cognitive, motivational, emotional, behavior problems, learning difficulties, addictions), social and/or cultural variables (e.g., negative family conditions, child abuse, cultural deprivation, ethnic conditions, immigration), or school variables (e.g., coexistence at school, bullying, cyberbullying) may concurrently hinder engagement, preventing the student from acquiring the learnings in the same conditions as the rest of the classmates.
