Questo progetto formativo, realizzato nella Facoltà di Scienze della Formazione dell'Università di Palermo nell'a.a. 2003-2004, è declinato in otto laboratori: di espressione corporea e danzaterapia, di animazione teatrale, di attività grafico-pittorica, di animazione musicale, di Lingua Italiana dei Segni anche nelle sue

espressioni artistiche, di metodologia del "creare con la sabbia", di osservazione finalizzata al sostegno della genitorialità.

With the growth of the global population, the expansion of metropolitan areas has become an essential aspect of land development. With the need for more space to accommodate the growing population, discussion on the best methods of expansion has arisen.

Designing Grid Cities for Optimized Urban

Development and Planning is a critical scholarly resource that explores the expansion and extension of metropolitan areas following "orthogonal" development plans. Featuring coverage on a wide range of topics, such as built environment, grid cities, and orthogonal urban matrix, this publication is geared towards engineers, city development planners, professionals, academicians, researchers, and students seeking current research on the advantages of using orthogonal development plans for metropolitan expansion.

The Routledge Handbook of Audio

Description IGI Global

This volume constitutes a first step towards an ever-deferred interdisciplinary dialogue on cultural traits. It offers a way to enter a representative sample of the intellectual diversity that surrounds this topic, and a means to stimulate innovative avenues of research. It stimulates critical thinking and awareness in the disciplines that need to conceptualize and study culture, cultural traits, and cultural diversity. Culture is often defined and studied with an emphasis on cultural features. For UNESCO, "culture should be regarded as the set of distinctive spiritual, material, intellectual and emotional features of society or a social group". But the very possibility of assuming the existence of cultural traits is not granted, and any serious evaluation of the notion of "cultural trait" requires the interrogation of several disciplines from cultural anthropology to linguistics, from psychology to sociology to musicology, and all areas of knowledge on culture. This book presents a strong multidisciplinary perspective that can help clarify the problems about cultural traits.

Le immagini del tempo. Arte e quarta**dimensione** Springer Nature

This collection examines the multifaceted opus of Pier Paolo Pasolini through a contemporary critical lens. It offers new interpretations to some classic works such as *Salò* or the 120 Days of Sodom and *Decameron* while considering some lesser studied pieces, for example *Orestiade* and his Friulian verse.

Pasolini's Lasting Impressions Liguori Editore Srl

Ha scritto Rudolf Arnheim, il più grande psicologo dell'arte vivente: «Soltanto in uno schema educativo dedito, nel suo complesso, e in tutte le sue attività, all'intento di rendere visibile il mondo, può avere senso in teoria ed in pratica l'educazione artistica. L'arte non è mai veramente se stessa quando vagola, come in una mera isola di visibilità, in un oceano di cecità. Essa comincia ad avere senso quando viene concepita come il tentativo più radicale di comprendere il significato della nostra esistenza mediante le forme, e i colori, e i movimenti che il senso della vista coglie e interpreta». E ancora: «Negliere l'arte non è che il simbolo più tangibile del diffusissimo stato di disoccupazione dei sensi in ogni settore

dello studio accademico. Ciò che specificamente occorre non è un più esteso insegnamento estetico, o un numero maggiore di manuali esoterici sull'educazione artistica, ma una battaglia convincente in favore del pensiero visuale, svolta su base del tutto generale. Se l'avremo compresa in teoria potremo cercare di curare in pratica la lacuna morbosa che storpia l'educazione della capacità ragionativa». Questi suoi ultimi Pensieri, cristallini nella loro incisiva chiarezza, denunciando il limite e l'artificiosità della scuola fondata sulle parole e sui numeri (quella scuola il cui prodotto esemplare, come è stato lucidamente denunciato, «sa molto, pensa poco e non crede a niente»), rendono chiare le ragioni del fallimento dell'educazione artistica fino ad oggi praticata, e indicano un nuovo modo di fare scuola: una riformulazione del progetto educativo nella sua globalità, all'interno del quale contestualizzare e risolvere l'annoso problema dell'educazione intitolata alle arti. Delineando percorsi concretamente esperibili e radicalmente innovativi rispetto alle prassi correnti, Arnheim indica

un modello di formazione dell'uomo potente ed articolato, capace di soddisfare le esigenze poste dalla società contemporanea. Il volume è corredato da un ampio saggio introduttivo della curatrice Lucia Pizzo Russo, la maggiore studiosa italiana di Arnheim.

Environment, Art, and Museums: The Aesthetic Experience in Different Contexts
Oxbow Books

This Handbook provides a comprehensive overview of the expanding field of audio description, the practice of rendering the visual elements of a multimodal product such as a film, painting, or live performance in the spoken mode, for the benefit principally of the blind and visually impaired community. This volume brings together scholars, researchers, practitioners and service providers, such as broadcasters from all over the world, to cover as thoroughly as possible all the theoretical and practical aspects of this discipline. In 38 chapters, the expert authors chart how the discipline has become established both as an important professional service and as a valid academic subject, how it has evolved and how it has come to play such an important

role in media accessibility. From the early history of the subject through to the challenges represented by ever-changing technology, the Handbook covers the approaches and methodologies adopted to analyse the "multimodal" text in the constant search for the optimum selection of the elements to describe. This is the essential guide and companion for advanced students, researchers and audio description professionals within the more general spheres of translation studies and media accessibility.

Conservation, Restoration, and Analysis of Architectural and Archaeological Heritage Springer Nature

Perception of expression distinguishes our cognitive activity in a pervasive, significant and peculiar way, and manifests itself paradigmatically in the vast world of artistic production. Art and Expression examines the cognitive processes involved in artistic production, aesthetic reception, understanding and enjoyment. Using a phenomenological theoretical and methodological framework, developed by Rudolf Arnheim and other important scholars interested in

expressive media, Alberto Argenton considers a wide range of artistic works, which span the whole arc of the history of western graphic and pictorial art. Argenton analyses the representational strategies of a dynamic and expressive character that can be reduced to basic aspects of perception, like obliqueness, amodal completion, and the bilateral function of contour, giving new directions relative to the functioning of cognitive activity. Art and Expression is a monument to the fruitful collaboration of art history and psychology, and Argenton has taken great care to construct a meaningful psychological approach to the arts based also on a knowledge of pictorial genres that allows him to systematically situate the works under scrutiny. Art and Expression is an essential resource for postgraduate researchers and scholars interested in visual perception, art, and gestalt psychology.

Pedagogia degli ambienti educativi
FrancoAngeli

This book gathers peer-reviewed papers presented at the 1st International and Interdisciplinary Conference on Image and Imagination (IMG 2019), held in Alghero,

Italy, in July 2019. Highlighting interdisciplinary and multi-disciplinary research concerning graphics science and education, the papers address theoretical research as well as applications, including education, in several fields of science, technology and art. Mainly focusing on graphics for communication, visualization, description and storytelling, and for learning and thought construction, the book provides architects, engineers, computer scientists, and designers with the latest advances in the field, particularly in the context of science, arts and education.

The Journal of Aesthetic Education

Rowman & Littlefield

Due anni di attività intorno all'elusivo concetto di estetica. Ricerca intorno ad opere, autori, curatori lasciando da parte ogni atteggiamento di ricezione passiva e di contemplazione distaccata per confrontarsi ed agire in prima persona e scoprire, così facendo, strutture immaginative e connotazioni ludiche; cose

che, per quanto riguarda l'arte, dovrebbero essere scontate ma di cui spesso ci si dimentica. C'è una dimensione relazionale dell'estetica che si costruisce attraverso i rapporti interpersonali e che si deposita nei luoghi attraverso consuetudini, divenute rituali, che un certo gruppo sviluppa e consolida nel tempo. Domande o provocazioni interrompono il rito portando in luce una trama nascosta, generando consapevolezza, autocoscienza estetica. Il compito che gli autori si propongono è quello di restituire, sia a chi ha partecipato alle attività seminariali sia al più ampio insieme dei lettori, temperie e senso di questa coinvolgente sperimentazione ai fini di una presa di contatto con la propria personale conoscenza e sensibilità estetica.

Lo spazio della luce Routledge

This book stems from the seminal work of Robert Venturi and aims at re-projecting it in the current cultural debate by extending it to the scale of landscape and placing it in connection with representative issues. It brings out the transdisciplinary synthesis of a necessarily interdisciplinary approach to the theme, aimed at creating new models which are able to represent the

complexity of a contradictory reality and to redefine the centrality of human dimension. As such, the volume gathers multiple experiences developed in different geographical areas, which come into connection with the role of representation. Composed of 43 chapters written by 81 authors from around the world, with an introduction by Jim Venturi and Cezar Nicolescu, the volume is divided into two parts, the first one more theoretical and the other one which showcases real-world applications, although there is never a total split between criticism and operational experimentation of research.

Seminario di autocoscienza estetica Univ of California Press

From generation to generation, people experience their landscapes differently. Humans depend on their natural environment: it shapes their behavior while it is often felt that deities responsible for both natural benefits and natural calamities (such as droughts, famines, floods and landslides) need to be appeased. We presume that, in many societies, lakes, rivers, rocks, mountains, caves and groves were considered sacred.

Individual sites and entire landscapes are often associated with divine actions, mythical heroes and etiological myths. Throughout human history, people have also felt the need to monumentalize their sacred landscape. But this is where the similarities end as different societies had very different understandings, beliefs and practices. The aim of this new thematic appraisal is to scrutinize carefully our evidence and rethink our methodologies in a multi-disciplinary approach. More than 30 papers investigate diverse sacred landscapes from the Iberian peninsula and Britain in the west to China in the east. They discuss how to interpret the intricate web of ciphers and symbols in the landscape and how people might have experienced it. We see the role of performance, ritual, orality, textuality and memory in people's sacred landscapes. A diachronic view allows us to study how landscapes were 'rewritten', adapted and redefined in the course of time to suit new cultural, political and religious understandings, not to mention the impact of urbanism on people's understandings. A key question is how was the landscape manipulated, transformed

and monumentalized – especially the colossal investments in monumental architecture we see in certain socio-historic contexts or the creation of an alternative humanmade, seemingly 'non-natural' landscape, with perfectly astronomically aligned buildings that define a cosmological order? Sacred Landscapes therefore aims to analyze the complex links between landscape, 'religiosity' and society, developing a dialectic framework that explores sacred landscapes across the ancient world in a dynamic, holistic, contextual and historical perspective.

Rudolf Arnheim Mimesis

This anthology translates eighteen papers by Italian philosopher and experimental psychologist Paolo Bozzi (1930-2003), bringing his distinctive and influential ideas to an English-speaking audience for the first time. The papers cover a range of methodological and experimental questions concerning the phenomenology of perception and their theoretical implications, with each one followed by commentary from leading international experts. In his laboratory work, Bozzi investigated visual and auditory

perception, such as our responses to pendular motion and bodies in freefall, afterimages, transparency effects, and grouping effects in dot lattices and among sounds (musical notes). Reflecting on the results of his enquiries against the background of traditional approaches to experimentation in these fields, Bozzi took a unique realist stance that challenges accepted approaches to perception, arguing that experimental phenomenology is neither a science of the perceptual process nor a science of the appearances; it is a science of how things are. The writings collected here offer an important resource for psychologists of perception and philosophers, as well as for researchers in cognitive science.

Gangemi Editore spa

Reconfigures classic aesthetic concepts in relation to the novelty introduced by

virtual bodies. Arguing that the virtual body is something new—namely, an entity that from an ontological perspective has only recently entered the world—Roberto Diodato considers the implications of this kind of body for aesthetics. Virtual bodies insert themselves into the space opened up by the famous distinction in Aristotle's Physics between natural and artificial beings—they are both. They are beings that are simultaneously events; they are images that are at once internal and external; they are ontological hybrids that exist only in the interaction between logical-computational text and human bodies endowed with technological prostheses. Pursuing this line of thought, Diodato reconfigures classic aesthetic concepts such as mimesis, representation, the relation between illusion and reality, the nature of images and imagination, and the theory of sensory knowledge. Roberto Diodato is Associate Professor of Aesthetics at the Catholic University of the Sacred Heart in Milan, Italy. Justin L. Harmon is a teaching assistant in the Philosophy Department at the University of Kentucky. Silvia Benso is Professor of Philosophy at the Rochester Institute of

Technology.

Saperi e competenze Gangemi Editore spa Dio si rivela nell'iter-esse del limite. E' nel limite ai margini dell'essere della creatura e del suo stesso non essere tra vita e morte, che si realizzano tutte e singole le connotazioni proprie della rivelazione. Forse che la dinamica liminale del perdersi e l'intreccio dei movimenti dell'osmosi e della performance non possano oggi offrire una legittima traduzione della realtà della kenosi? Rivelandosi, Dio scende in campo, incontra il finito nella sua stessa finitezza: il fine incontra il fine, confidandosi e scegliendo di finire con e per esso. Dio e Dio nel con-fine: non c'è più solenne proclamazione della prossimità inaugurata dall'avventura storica di Colui che non ha divelto la sua tenda dal regno degli uomini: trovarlo significa imparare a cercarlo nel cuore del labirinto, al limitare oscuro della nostra esperienza trascendentale.

La teoria del restauro nel Novecento da Riegl a Brandi IGI Global

Cos'è la poesia per chi abita la mediasfera digitale? La tradizione poetica rimane legata all'ambiente orale-chirografico in cui si è strutturata? O segue i tracciati

dell'esperienza lacerante e tumultuosa del soggetto nell'era della metropoli e della simultaneità elettrica? E come ha trascinato nello spazio-tempo dei media attuali? L'obiettivo del libro è indagare sugli orientamenti che caratterizzano oggi la poesia sul piano della produzione e della sperimentazione linguistica, della didattica, della formazione dell'identità o del semplice intrattenimento ludico, nel contesto dei media digitali e delle nuove forme della testualità: transmedialità, coproduzione, apprendimento, gamification.

Digital Draw Connections Mimesis Cultural heritage identifies and preserves past achievements for the benefit of future generations. Examining the extent to which heritage preservation is feasible in an era governed by modernism and globalization is essential for both regional development and cultural conservation. Conservation, Restoration, and Analysis of Architectural and Archaeological Heritage provides innovative insights into digital technologies that have produced important methodological changes in the documentation, analysis, and conservation of cultural heritage. The content within

this publication represents the work of digital restoration, inclusive communication, and reality-based representation. It is a vital reference source for software developers, sociologists, policymakers, tourism managers, and academicians seeking coverage on digital technologies and data processing in cultural heritage.

Nuovi spazi della poesia Frontiers Media SA

This book explores the nature of one of the most ancient tools for nonverbal communication: drawings. They are naturally adaptable enough to meet an incredibly wide range of communication needs. But how exactly do they do their job so well? Avoiding the kinds of aesthetic rankings of different graphic domains so often made by art historians and critics, Manfredo Massironi considers an extensive and representative sample of graphic

applications with an open mind. He finds a deep mutuality between the material components of images and the activation of the perceptual and cognitive processes that create and decipher them. Massironi first examines the material components themselves: the mark or line, the plane of representation (the angle formed by the actual drawing surface and the depicted objects), and the position of the viewpoint relative to the depicted objects. The roles played by these three components are independent of the content of the drawing; they function in the same way in concrete and abstract representations. He then closely scrutinizes the choices made by the person planning and executing the drawings. Given that any object can be depicted in an infinite number of different ways, the drawer performs continuous work emphasizing and excluding different features. The choices are typically unconscious and guided by his or her

communicative goals. A successful graph, be it simple or complex, is always successful precisely because the emphasized features are far fewer in number than the excluded ones. Finally, he analyzes the perceptual and cognitive integrations made by the viewer. Drawings are not simply tools for communication but important instruments for investigating reality and its structure. Richly illustrated, the book includes a series of graphic exercises that enable readers to get a sense of their own perceptual and cognitive activity when inspecting images. Massironi's pathbreaking taxonomy of graphic productions will illuminate all the processes involved in producing and understanding graphic images for a wide audience, in fields ranging from perceptual and cognitive psychology through human factors and graphic design to architecture and art history.
