Scores of talented and dedicated people
 serve the forensic science community,
 performing vitally important work.

However, they are often constrained by
 lack of adequate resources, sound policies,
 and national support. It is clear that
 change and advancements, both

systematic and scientific, are needed in a
 number of forensic science disciplines to
 ensure the reliability of work, establish
 enforceable standards, and promote best
 practices with consistent application.
 Strengthening Forensic Science in the
 United States: A Path Forward provides a
 detailed plan for addressing these needs
 and suggests the creation of a new
 government entity, the National Institute
 of Forensic Science, to establish and
 enforce standards within the forensic
 science community. The benefits of
 improving and regulating the forensic
 science disciplines are clear: assisting law
 enforcement officials, enhancing
 homeland security, and reducing the risk
 of wrongful conviction and exoneration.

Strengthening Forensic Science in the
 United States gives a full account of what
 is needed to advance the forensic science
 disciplines, including upgrading of systems
 and organizational structures, better
 training, widespread adoption of uniform
 and enforceable best practices, and
 mandatory certification and accreditation
 programs. While this book provides an
 essential call-to-action for congress and
 policy makers, it also serves as a vital tool
 for law enforcement agencies, criminal
 prosecutors and attorneys, and forensic
 science educators.

Meeting UK energy and climate Needs : The role of carbon capture and storage, first report of session 2005-06, Vol. 2: Oral and written Evidence

Resources in Education CRC Press

This book focuses on current practices in scientific and technical communication, historical aspects, and characteristics and biblio-graphic control of various forms of scientific and technical literature. It integrates the inventory approach for scientific and technical communication.

Hearings, Reports and Prints of the Senate Committee on Government Operations University of Pittsburgh Press

As a professor of physics at Princeton University for nearly ten years, Edward Condon sealed his reputation as one of the sharpest minds in the field and a pioneer in quantum theoretical physics. Then, in 1937, he left it all behind to pursue an industrial career—first at the Westinghouse Electric and Manufacturing Company in Pittsburgh and then, by way of the federal government, at the National Bureau of Standards. In a radical departure from professional norms, Condon sought to redefine the relationship between academic science and technological innovation in industry. He envisioned intimate cooperation with the universities to serve the needs of his employers and also the broader business community. Edward Condon's Cooperative Vision explores the life cycle of that vision during the Great Depression, the Second World War, and the early Cold War. Condon's cooperative model of research and development evolved over time and by consequence laid bare sharp disagreements among academic, corporate, and government stakeholders about the practical value of new

knowledge, where and how it should be produced, and ultimately, on whose behalf it ought to be put to use.

Quarterly List (with Prices and Postage Affixed) of Official Publications Issued by H.M. Stationery Office Edward Condon's Cooperative Vision

The Committee's report examines science and mathematics teaching in secondary schools in England, focusing on the following issues: the take-up of science and mathematics at GCSE and A-level, the provision of careers advice to students, problems in the recruitment and retention of teachers, the quality of teaching methods and the role of continuing professional development. The Committee finds that effective science teaching in schools is essential, both in order to ensure a satisfactory general level of scientific literacy in society, and to enable the next generation of scientists and engineers to progress into higher education and beyond. It argues that the current examination system forces students to study an excessively narrow range of subjects at too early an age, and it recommends that the Government should reconsider the Tomlinson proposals for a broader diploma-based system for 14-19 year old students based on the International Baccalaureate. This would ensure that students receive a more rounded education and are not made to over-specialise before they are able to see the merits of studying science and mathematics. Concerns are also raised about the shortage of science teachers, particularly specialist physics and chemistry teachers, the quality of careers advice in schools, and the importance of practical science in schools.

College Physics

A survey of the state-of-the-art in the evaluation of natural terrain by earth-science techniques and measurement systems is presented in response to a need that existed for many years. This report considers the terrain as an envelope of the environment and all related parameters that are basic in an evaluation for relevant military applications such as unimproved landing areas, trafficability, site selection for operational facilities, terrain reconnaissance and surveillance, and target detection within a masked terrain complex. Methods of terrain-data acquisition, analysis, and evaluation and their limitations are reviewed. The status of research and development, specifying the gaps in technology, is summarized with accompanying conclusions. The report forecasts the requirement for an automated terrain-data acquisition, storage, and display system. Information pertaining to the classification of terrain data, field devices to measure bearing strength, and a visualized optimum remote sensing system is also given in the appendix. A glossary and a comprehensive bibliography are included. (Author).

Quarterly List of Parliamentary Publications

These vols. contain the same material as the early vols. of Social sciences & humanities index.
