Serving to unify the existing literature on extended warranties, maintenance service contracts and lease contracts, this book also presents a unique perspective on the topic focussed on cost analysis and decision-making from the perspectives of the parties involved. Using a game theoretic approach together with mathematical modelling, results are presented in an integrated manner with key topics that require further research highlighted in order to serve as a starting point for researchers (engineers and statisticians) who are interested in doing further work in these areas. Designed to assist practitioners (managers, engineers, applied statisticians) who are involved with extended warranties, maintenance service contracts and lease contracts, the book provides them with the models and techniques needed for proper cost analysis and effective decision-making, The book is also suitable for use as a reference text in industrial engineering, applied statistics, operations research and management. The Routledge Course in Japanese Translation brings together for the first time material dedicated to the theory and practice of translation to and from Japanese. This one semester advanced course in Japanese translation is designed to raise awareness of the many considerations that must be taken into account when translating a text. As students progress through the course they will acquire various tools to deal with the common problems typically involved in the practice of translation. Particular attention is paid to the structural differences between Japanese and English and to cross-cultural dissimilarities in stylistics. Essential theory and information on the translation process are provided as well as abundant practical tasks. The Routledge Course in Japanese Translation is essential reading for all serious students of Japanese at both undergraduate and postgraduate level. Impairments in social functioning are among the hallmark characteristics of schizophrenia. These deficits predict relapse rate and may be independent of better-studied symptoms such as hallucinations. Additionally, studies indicate that social functioning is one of the most important domains for individuals with schizophrenia, many of whom consider social functioning to be a key area of unmet need. Social Cognition and Interaction Training (SCIT) is a group psychotherapy for individuals with schizophrenia and other psychotic disorders. Social cognition refers to the thinking processes that people use to navigate the social world. Deficits in social cognition hinder people with schizophrenia and other mental illnesses from living meaningful, socially connected lives. The SCIT Clinician Guide provides comprehensive instruction for mental health professionals to enhance social cognition and promote rewarding social lives for their clients. SCIT is appropriate for adults suffering from psychotic illness and who have interpersonal difficulties as a result. SCIT is particularly appropriate for individuals with symptoms of suspiciousness and paranoia. The authors summarize the rationale and theoretical underpinnings of SCIT, distinguish it from other treatments for psychosis, provide an overview of the intervention, explain the links between the intervention activities and the underlying theoretical model, and describe SCIT implementation session-by-session. SCIT is a 20- to 24-week group-based treatment that can be delivered by mental health clinicians of all levels in a wide range of community and hospital settings. SCIT uses exercises, games, discussion formats, and interactive social stimuli to target and improve specific areas of social cognitive dysfunction, and includes user-friendly tips and handouts for clients. It also provides web access to a library of videos, images and slide shows that are used to bring the SCIT training sessions to life. This book presents an overview of the U.S. Department of Defense (DoD) resource allocation issue, considering the period from 1948 to 1980. It describes the major characteristics of the DoD resource allocation process and discusses the potential impact of various shocks on the allocation system. Collected here are 112 papers concerned with new directions in manufacturing systems, given at the 41st CIRP Conference on Manufacturing Systems. The high-quality material includes reports of work from both scientific and engineering standpoints. This book constitutes the refereed proceedings of the Third International Conference on Multimodal Interfaces, ICMI 2000, held in Beijing, China in October 2000. Of the 758 species of hard ticks (family Ixodidae) currently known to science, 137 (18%) are found in the Neotropical Zoogeographic Region, an area that extends from the eastern and western flanks of the Mexican Plateau southward to southern Argentina and Chile and that also includes the Greater and Lesser Antilles and the Galápagos Islands. This vast and biotically rich region has long attracted natural scientists, with the result that the literature on Neotropical ticks, which are second only to mosquitoes as vectors of human disease and are of paramount veterinary importance, is enormous, diffuse, and often inaccessible to non-specialists. In this book, three leading authorities on the Ixodidae have combined their talents to produce a summary of essential information for every Neotropical tick species. Under each species name, readers will find an account of the original taxonomic description and subsequent redescriptions, followed by an overview of its geographic distribution and host relationships, including a discussion of human parasitism. Additional sections provide detailed analyses of tick distribution by country and zoogeographic subregion (the Caribbean, southern Mexico and Central America, South America, and the Galápagos Islands), together with a review of the phenomenon of invasive tick species and examination of the many valid and invalid names that have appeared in the Neotropical tick literature. The text concludes with an unprecedented tabulation of all known hosts of Neotropical Ixodidae, including the tick life history stages collected from each host. This book is an invaluable reference for biologists and biomedical personnel seeking to familiarize themselves with the Neotropical tick fauna. Medical simulation is a relatively new science that is achieving respectability among healthcare educators worldwide. Simulation and skills centres have become established to integrate simulation into mainstream education in all medical, nursing, and paramedical fields. Borrowing from the experience and methodologies of industries that are using simulation, medical educators are grappling with the problem of rapidly acquiring the skills and techniques required to implement simulation programmes into established curricula. This book assists both novice and experienced workers in the field to learn from established practitioners in medical simulation. Simulation has been used to enhance the educational experience in a diverse range of fields; therefore a wide variety of disciplines are represented. The book begins with a section on the logistics of establishing a simulation and skills centre and the inherent problems with funding, equipment, staffing and course development, and promotion. Section two deals with simulators and related training devices that are required to equip a stand-alone or institution-based centre. The features, strengths, and weaknesses of training devices are presented to help the reader find the appropriate simulator to fulfil their training requirements. There is a guide to producing scenarios and medical props that can enhance the training experience. The third section covers adult education and it reviews the steps required to develop courses that comply with 'best practice' in medical education. Teaching skills, facilitating problem-based learning groups and debriefing techniques are especially important to multidisciplinary skills centres that find themselves becoming a centre for medical education. The manual concludes with guides for the major specialties that use simulation, including military, paediatrics, CPR and medical response teams, obstetrics, and anesthesia. The Facilitator Manual's purpose is to plan and structure different session, including recommended activities and tips to adapt the session for various types of trainings. The Training Manual is one component of Training resource kit. The resource kit provides guidance and tools for preparing, designing and implementing trainings. The Facilitators' Manual for training of facilitators includes the materials needed to build the capacity of the facilitators and the points to be covered. This Manual must be read in its entirety before implementing a training session as it has been prepared to familiarize them with the proposed course, follow and review the facilitators guideline, materials needed to facilitate each session, and gain confidence before entering the session. Participant learning and the overall success of the training session lies on the shoulders of the Facilitators. Therefore, they should be enthusiastic enough to spread positivity in the room, so that Participants feel comfortable to ask any questions, even simple ones. The should arrive at least an hour before the starting time to set-up the room and materials as per training needs. Also, it is the duty of Facilitators to engage participants throughout the session. Participants can be engaged by encouraging them to contribute in the topic, their views / opinions to be allowed. In general, the common list of materials required for training / workshop includes: Laptop, LCD projector, Screen, power cords, Mouse Pointer, PowerPoint Point, Flip charts, easels, tape, Colored markers, Name tags/name placards, Participant packets, Attendance sheet, Agenda, Case Study, election related different Proformas / forms / formats, EVM-VVPAT etc. If you're vexed and perplexed by PowerPoint, pick up a copy of Fixing PowerPoint Annoyances.
