Periodontal Manifestations of Local and Systemic Diseases Sep 11 2022 I am delighted to see the appearance of the first comprehensive atlas recognizing the important

relationship between periodontal and systemic health and disease. The atlas is not intended to cover the new areas of interest in relation to periodontal health and cardiac and other disease, but rather to demonstrate the systemic diseases that manifest to the periodontist and hygienist. The atlas thus covers a vast range of systemic disorders that may present with gingival or periodontal lesions and highlights the importance of the periodontal and oral medicine teams in diagnosing and managing patients with sometimes complex medical problems. The authors, Professor George Laskaris and Professor Crispian Scully, are both active clinicians, teachers and researchers in oral medicine, with wide experience and special interest in the oral medicine/periodontal interface and both have published widely in their fields. I welcome this contribution to the advancement of care for the patient with periodontal disease. Jan Lindhe Professor Emeritus of Periodontology University of Gothenburg, Sweden ~

Radiology Feb 21 2021 Today, for patients of any age, a panoramic radiograph that allows high diagnostic reliability with minimum radiation exposure must be acknowledged as the standard of care. The new, more medically and legally responsible strategy for examination of patients is closely intertwined with a basic principle of patient care. Panoramic radiograph is rapidly becoming a meaningful and normal component of dental practice-oriented prevention. This Atlas presents the proper use of optimum radiographic exposure and contemporary techniques for today's dental office. Emphasis is placed on the reliable recognition of normal structures in the projected space and clear differentiation of normal features from pathological radiographic signs. These major topics of fundamental importance for correct interpretation are treated more extensively. The section on diagnosis deals in depth with the typical radiographic manifestations of frequently occurring pathological processes. Inherent in that section of the book is the basic understanding that the radiopathologic manifestation of one and the same lesion may vary considerably depending on the patient's age and sex, on the phase of development of the lesion at the time of documentation, on the localization within different surrounding structures, and according to actual histologic features of the lesion.
