liquids, and gases with hands-on activities. Reading Instructional Goals for Older Readers. Teacher's Guide with explicit, integrated daily lessons. Bringing together a wide collection of ideas, reviews, analyses and new research on particulate and structural concepts of matter, Concepts of Matter in Science Education informs practice from pre-school through graduate school learning and teaching and aims to inspire progress in science education. The expert contributors offer a range of reviews and critical analyses of related literature and in-depth analysis of specific issues, as well as new research. Among the themes covered are learning progressions for teaching a particle model of matter, the mental models of both students and teachers of the particulate nature of matter, educational technology, chemical reactions and chemical phenomena, chemical structure and bonding, quantum chemistry and the history and philosophy of science relating to the particulate nature of matter. The book will benefit a wide audience including classroom practitioners and student teachers at every educational level, teacher educators and researchers in science education. "If gaining the precise meaning in particulate terms of what is solid, what is liquid, and that air is a gas, were that simple, we would not be confronted with another book which, while suggesting new approaches to teaching these topics, confirms they are still very difficult for students to learn". Peter Fensham, Emeritus Professor Monash University, Adjunct Professor QUT (from the foreword to this book) English for the Energy Industries: Oil, Gas and Petrochemicals English for the Energy Industries is a foundation English course for employees in the oil, gas and petrochemicals industries. It is aimed at pre- and low-intermediate level students who have a basic grasp of English, but who need to use technical and semi-technical vocabulary within specific functional language applicable to the workplace. It provides approximately 140 hours of listening, speaking, reading, writing and language practice activities. English for the Energy Industries focuses on high-frequency lexis and structures used in the work environment, such as the language of safety, instructions, descriptions of equipment, processes and systems. English for the Energy Industries develops the

four language skills in English for Specific Purposes (ESP) contexts:
 Reading: uses authentic texts that energy industry technicians will use in everyday life, such as instruction manuals. Speaking and listening: communicative pairwork tasks practise real-life communication situations, such as describing and giving information about equipment and jobs, giving instructions and warnings and discussing workplace problems. Writing: tasks motivate students by developing knowledge of useful language for different text types, such as accident report forms and written notes and instructions. A comprehensive Glossary provides clear explanations of approximately 160 key terms in common use in the energy industries. Key Features Essential expressions and language used in the industry Constant recycling of high-frequency technical terms and vocabulary Real-life listening and reading texts A communicative approach to oral accuracy and fluency Over 140 hours of skills practice activities A glossary of over 160 key terms View accompanying audio CDs and Teacher's Book. The "Teacher's Edition" is designed to add direction to "High School Chemistry," which is an outline of notes. The books go hand-in-hand: "[Modified] Second Edition" as a student's workbook, and guidance from the "Teacher's Edition." A very simple introduction to what gases are, giving examples of some different kinds. " ... Students investigate examples of changes that affect their daily lives. Specifically, students examine some changes that occur when solids and liquids are mixed or change state. They consider how water freezes, melts, evaporates, and condenses. They observe the properties of solids, liquids, and gases and describe some of the changes that take place when substances are combined or separated."--Page 4.
