The Coral Sea Nov 20 2022 In linked pieces, singer/songwriter Patti Smith tells the story of a man on a journey to see the Southern Cross, who is reflecting upon his life and fighting the illness that is consuming him. Through this collection of metaphoric and dreamy poems, "a singular, glowing vision of Robert Mapplethorpe develops and emerges" (William S. Burroughs). Photos.

The Blue Planet: Seas of Life Jul 28 2023 Seasonal Seas: As the days grow longer, billions of microscopic plankton bloom under the blazing sun. Here in the temperate seas, three-ton basking sharks graze among forest of giant kelp--the fastest growing plant in the world. The forests harbor thousands of other animals, including sea otters, brilliantly colored anemones, squid, and exquisite leafy dragons. But as the year wears on, storms rage in the icy sea . . . a desperate challenge for the animals that remain. Coral Seas: Bathed in bright sunlight and warm, clear water, the coral reef is a rich oasis of life--the rainforest of the sea. Bizarrely adorned harlequin shrimp carry off a starfish several times their size, while haunting songs reverberate around the reef, heralding the arrival of humpback whales. Shimmering schools of brightly colored fish battle for territory in the competitive world where you have to stand out to survive.

Battle Stations Jul 24 2020 The true story of the valiant men who gave their all to save the aircraft carrier USS Yorktown—and changed the course of the Pacific War. On June 4, 1942—six months after the attack on Pearl Harbor—Yorktown's crew began the carrier's final battle against Japan's infamous aircrafts. Hotshot fighter pilot Lieutenant Scott McCuskey attacked from the air in his Wildcat, becoming the Navy's second-ever "ace in a day." Carpenter Boyd McKenzie worked

tirelessly to repair Yorktown before a fresh air strike. Critically injured gun crew member George Weise fought for his life as the ship threatened to capsize. Meanwhile, Pharmacist's Mate Second Class Warren Heller raced to save the lives of bloodied gunners and sailors by evacuating them before time ran out. The stories of these heroes and many other brave servicemen bring the gripping narrative of Yorktown's final thirty days to life, as she fights in the near back-to-back Battles of Coral Sea and Midway. Through unpublished memoirs and interviews with Yorktown's last surviving veterans, acclaimed author Stephen L. Moore offers up a new and compelling amount of a pivotal month in World War II, while honoring the courage of those who served.

Life on the Rocks Mar 12 2022 The story of the urgent fight to save coral reefs, and why it matters to us all Coral reefs are a microcosm of our planet: extraordinarily diverse, deeply interconnected, and full of wonders. When they're thriving, these fairy gardens hidden beneath the ocean's surface burst with color and life. They sustain bountiful ecosystems and protect vulnerable coasts. Corals themselves are evolutionary marvels that build elaborate limestone formations from their collective skeletons, broker symbiotic relationships with algae, and manufacture their own fluorescent sunblock. But corals across the planet are in the middle of an unprecedented die-off, beset by warming oceans, pollution, damage by humans, and a devastating pandemic. Juli Berwald fell in love with coral reefs as a marine biology student, entranced by their beauty and complexity. Alarmed by their peril, she traveled the world to discover how to prevent their loss. She met scientists and activists operating in emergency mode, doing everything they can think of to prevent coral reefs from disappearing forever. She was so amazed by the ingenuity of these last-ditch efforts that she joined in rescue missions, unexpected partnerships, and risky experiments, and helped rebuild reefs with rebar and zip ties. Life on the Rocks is an inspiring, lucid, meditative ode to the reefs and the undaunted scientists working to

save them against almost impossible odds. As she also attempts to help her daughter in her struggle with mental illness, Berwald explores what it means to keep fighting a battle whose outcome is uncertain. She contemplates the inevitable grief of climate change and the beauty of small victories. Coral Reef Coloring Book Feb 23 2023 Depicts " ... a host of marine creatures for whom the coral reef is home: seahorse, butterflyfish, hawksbill turtle, parrotfish, octopus, damselfish, moray eel, sea cucumber, dolphin, hydromedusa jellyfish, sea dragon, royal empress angelfish, triggerfish, moorish idol and many more. Detailed captions provide a fascinating overview of the great diversity of life on coral reefs"--Back cover.

Don't Mess With Me: The Strange Lives of Venomous Sea Creatures (How Nature Works) Nov 27 2020 The role of venoms in nature ... and in human medicine Why are toxins so advantageous to their possessors as to evolve over and over again? What is it about watery environments that favors so many venomous creatures? Marine biologist Paul Erickson explores these and other questions with astounding images from Andrew Martinez and other top underwater photographers. GREAT for teaching STEM Marine Biology Scorpions and brown recluse spiders are fine as far as they go, but if you want daily contact with venomous creatures, the ocean is the place to be. Blue-ringed octopi, stony corals, sea jellies, stonefish, lionfish, poison-fanged blennies, stingrays, cone snails, blind remipedes, fire urchins—you can choose your poison in the ocean. Venoms are often but not always defensive weapons. The banded sea krait, an aquatic snake, wriggles into undersea caves to prey on vicious moray eels, killing them with one of the world's most deadly neurotoxins, which it injects through fangs that resemble hypodermic needles. The Komodo dragon, an ocean-going reptile, tears into a

water buffalo with its blade-like teeth, then secretes a deadly toxin into the open wounds.

Over in the Ocean Feb 28 2021 Learning becomes fun with this book about the animals of the ocean! In *Over in the Ocean: In a Coral Reef*, amazing artwork will inspire kids in classrooms and at home to appreciate the beauty and biology of coral reefs and world around us! The World Beneath May 14 2022 Meet the world's most fascinating sea creatures—see the lives and curiosities of colorful fish and coral reefs—this spectacular volume has more than 300 color photos and extraordinary text from a leading marine biologist and underwater photographer, and the international expert on seahorses. In this richly informative volume, brimming with new discoveries and more than three hundred colorful images of jaw-dropping fish and coral reefs, you'll swim in the Atlantic, Pacific, and Indian Oceans; you'll be dazzled in the Coral Triangle and amazed in Triton Bay. Up close you'll meet the Cenderawasih fairy wrasse, with its florescent yellow streak; the polka-dot longnose filefish; and the multicolored seadragon. There are scarlet-colored corals, baby-blue sponges, daffodil crinoids, and all sorts of mystifying creatures that change color at the drop of a hat. The whale shark is almost larger than life and the author's beloved pygmy seahorse, unless photographed, is

almost too tiny to see. The wondrous creatures inside are charmers and tricksters and excel in the arts of seduction and deception, and you'll have the rare chance to see and delight in their antics. You'll also learn what they eat, how they play, and how they care for one another, live on one another, and mimic others when they're afraid. There is also compelling insight into the naming process, which sea creatures are facing extinction, and how we can help them before it's too late.
