***The Meat Paradox Dec 21 2022 From a vital new voice in food ethics comes a smart, nuanced investigation into the current meat debate. Our future diet will be shaped by diverse forces. It will be shaped by novel technologies, by geopolitical tensions, and the evolution of cultural preferences, by shocks to the status quo— pandemics and economic strife, the escalation of the climate and ecological crises—and by how we choose to respond. It will also be shaped by our emotions. It will be shaped by the meat paradox. "Should we eat animals?" was, until recently, a question reserved for moral philosophers and an ethically minded minority, but it is now posed on restaurant menus and supermarket shelves, on social media and morning television. The recent surge in popularity for veganism in the UK, Europe and North America has created a rupture in the rites and rituals of meat, challenging the cultural narratives that sustain our omnivory. In The Meat Paradox, Rob Percival, an expert in the politics of meat, searches for the evolutionary origins of the meat paradox, asking when our relationship with meat first became***

**emotionally and ethically complicated. Every society must eat, and meat provides an important source of nutrients. But every society is moved by its empathy. We must all find a way of balancing competing and contradictory imperatives. This new book is essential reading for anyone interested in the origins of our empathy, the psychology of our dietary choices, and anyone who has wondered whether they should or shouldn't eat meat.**

***The Handbook of Organic and Fair Trade Food Marketing May 22 2020 The markets for organic and fair trade food are growing rapidly. Although there are some important differences, both seek to address the consumer desire for “better” food: fair trade because***

**it offers economically disadvantaged producers a better financial return; organic because it is perceived to be a more sustainable system delivering better-tasting, healthier and safer food than that produced by non-organic methods. The Handbook of Organic and Fair Trade Food Marketing provides a practical guide to successful marketing in these two dynamic sectors, underpinned by case-histories and lessons from companies that have been successful in these areas, including Green & Black's, Yeo Valley and Duchy Originals. It includes a review of the international markets for organic and fair trade food and drink; an analysis of organic and fair trade consumers; a review of successful retailing practice and a section on organic and fair trade divergence and convergence. Chapters are also included on perspectives from the USA, Germany and Italy. The book is written by industry experts, augmented by academic contributions where appropriate, offering for the first time the practical marketing advice required by companies in this sector.**

It's a mouth-watering seasonal adventure.**

**The Organic Food and Farming Report 1998 Aug 17 2022**

**Rebels for the Soil Jan 10 2022 This book investigates the emergence of organic food and farming as a social movement. Using the tools of political sociology it analyzes and explains how both people and ideas have shaped a movement that from its inception aimed to change global agriculture. Starting from the British Empire in the 1930's, where the first trans-national roots of organic farming took hold, through to the internet-mediated social protests against genetically modified crops at the end of the twentieth century, the author traces the rise to prominence of the movement. As well as providing a historical account, the book explains the movement's on-going role in fostering and organising alternatives to the dominant intensive and industrial forms of agriculture, such as promoting local food produce and animal welfare. By considering it as a trans-national movement from its inception, aiming at cultural and social change, the**

**book highlights what is unique about the organic movement and why it has risen only relatively recently to public attention. The author reports original research findings, focusing largely on the English-speaking world. The work is grounded in academic enquiry and theory, but also provides a narrative through which the movement can be understood by the more general interested reader.**

**PIG Sep 18 2022 What is it about the humble pig that holds such a special place in our hearts? In a frosty field on the longest night of the year, eight little piglets snuffle their first breaths, and jostle close to their mother to feed... So begins the life of the farm animal that you think you already know. But think again... This is the magical account of the life and times of a gang of Saddleback pigs, from one of the most forward-thinking organic farmers in the United Kingdom. Helen Browning shines a light on the secret lives of these mischievous, intelligent, and inventive animals - and shares her vision for the future of ethical farming. If you liked *The Secret Life of Cows* and *A Shepherd's Life*, you'll love this evocative and illuminating tale... What people are saying about Helen: 'A woman who won't be cowed in the war against titan farms' - Independent 'Pioneering' - Guardian**

**Handbook of Organic Food Processing and Production Feb 28 2021 The increasing interest in organic foods has created a need for this book, the first practical manual to cover the processing of organic food and drink. The book shows how a company can process organic foods, emphasising economic and legal considerations. The authors have been selected for their extensive 'hands-on' experience of organic food processing. By demystifying the processing of organic foods this book will encourage those from outside the current organic food industry to become involved. An initial introduction to organic food is followed by a review of organic legislation (chapter 2) and the organic certification process (chapter 3). The following six chapters cover the major organic commodity groups: Fruit and Vegetables, Cereal Products, Meat**

**and Meat Products, Dairy Products, Other Processed Foods and Alcoholic Drinks. Chapter 10 is devoted to developments in the USA. Finally there is an extensive directory, giving details of the major players and organic organisations throughout the world. The book will appeal to technical and marketing personnel in organic food and drink processing companies, as well as their counterparts in companies who want to become involved. Other people who will find this book of interest include retailers who sell organic foods; farmers who grow organic crops; lecturers and students of Food Science and Food Technology; lecturers and students of Agriculture; and anyone who wants an introduction to this rapidly developing sector of the food industry.**

**Reconnecting Consumers, Producers and Food Apr 20 2020 Reconnecting Consumers, Producers and Food presents a detailed and empirically grounded analysis of alternatives to current models of food provision. The book offers insights into the identities, motives and practices of individuals engaged in reconnecting producers, consumers and food. Arguing for a critical reevaluation of the meanings of choice and convenience, Reconnecting Consumers, Producers and Food provides evidence to support the construction of a more sustainable and equitable food system which is built on the relationships between people, communities and their environments.**

**Civic Engagement in Food System Governance Jul 24 2020** *The local food movement is one of the most active of current civil engagement social movements. This work presents primary evidence from over 900 documents, interviews, and participant observations, and provides the first descriptive history of local food movement national policy achievements in the US, from 1976 to 2013, and in the UK, from 1991 to 2013, together with reviews of both the American and British local food movements. It provides a US-UK comparative context, significantly updating earlier comparisons of American, British and European farm and rural policies. The comparative perspective shows that, over time, more effective strategies for national policy change required social-movement building strategies, such as collaborative policy coalitions, capacity-building for smaller organizations, and policy entrepreneurship for joining together separate rural, farming, food, and health interests. In contrast, narrowly-defined single issue campaigns often undermined long-term policy change, even if short-term wins emerged. By profiling interviews of American and English movement leaders, policymakers, and funders, the book demonstrates that democratic participation in food policy is best supported when funders incentivize groups to work together and overcome their differences.*

**Organic Food and Farming Dec 09 2021 "This booklet**

***examines some of the key issues around organic food and its production. It takes up the challenge of answering the critics - critics who range from public relations companies defending agribusiness, through to the heads of national food authorities and some academics. It exposes the misleading and erroneous statements made against organic food, and provides the facts that prove them wrong."***

***Alternative Food Networks Sep 25 2020 Farmers' markets, veggie boxes, local foods, organic products and Fair Trade goods - how have these once novel, "alternative" foods, and the people and networks supporting them, become increasingly familiar features of everyday consumption? Are the visions of "alternative worlds" built on ethics of sustainability, social justice, animal welfare and the aesthetic values of local food cultures and traditional crafts still credible now that these foods crowd supermarket shelves and other "mainstream" shopping outlets? This timely book provides a critical review of the growth of alternative food networks and their struggle to defend their ethical and aesthetic values against the standardizing pressures of the corporate mainstream with its "placeless and nameless" global supply networks. It explores how these alternative movements are "making a difference" and their possible role as fears of global climate change and food insecurity intensify. It assesses the different experiences of these networks in three major arenas of food activism and politics: Britain and Western***

**Europe, the United States, and the global Fair Trade economy. This comparative perspective runs throughout the book to fully explore the progressive erosion of the interface between alternative and mainstream food provisioning. As the era of "cheap food" draws to a close, analysis of the limitations of market-based social change and the future of alternative food economies and localist food politics place this book at the cutting-edge of the field. The book is thoroughly informed by contemporary social theory and interdisciplinary social scientific scholarship, formulates an integrative social practice framework to understand alternative food production-consumption, and offers a unique geographical reach in its case studies.**

**Re-Thinking Organic Food and Farming in a Changing World Apr 01 2021 This book is based on the assumption that "organic has lost its way". Paradoxically, it comes at a time when we witness the continuing of growth in organic food production and markets around the world. Yet, the book claims that organic has lost sight of its first or fundamental philosophical principles and ontological assumptions.**

***The collection offers empirically grounded discussions that address the principles and fundamental assumptions of organic farming and marketing practices. The book draws attention to the core principles of organic and offers different clearly articulated and well-defined conceptual frameworks that offer new insights into organic practices. Divided into five parts, the book presents new perspectives on enduring issues, examines standards and certification, gives insights into much-discussed and additional market and consumer issues, and reviews the interplay of organic and conventional farming. The book concludes with a framework for rethinking ethics in the organic movement and reflections on the positioning of organic ethics.***
