**The First New Chronicle and Good Government** Dec 05 2021

One of the most fascinating books on pre-Columbian and early colonial Peru was written by a Peruvian Indian named Felipe Guaman Poma de Ayala. This book, *The First New Chronicle and Good Government*, covers pre-Inca times, various aspects of Inca culture, the Spanish conquest, and colonial times up to around 1615 when the manuscript was finished. Now housed in the Royal Library, Copenhagen, Denmark, and viewable online at [www.kb.dk/permalink/2006/poma/info/en/frontpage.htm](http://www.kb.dk/permalink/2006/poma/info/en/frontpage.htm), the original manuscript has 1,189 pages accompanied by 398 full-page drawings that constitute the most accurate graphic depiction of Inca and colonial Peruvian material culture ever done. Working from the original manuscript and consulting with fellow Quechua- and Spanish-language experts, Roland Hamilton here provides the most complete and authoritative English translation of approximately the first third of *The First New Chronicle and Good Government*. The sections included in this volume (pages 1-369 of the manuscript) cover the history of Peru from the earliest times and the lives of each of the Inca rulers and their wives, as well as a wealth of information about ordinances, age grades, the calendar, idols, sorcerers, burials, punishments, jails, songs, palaces, roads, storage houses, and government officials. One hundred forty-six of Guaman Poma's detailed illustrations amplify the text.

### **Hellenism and the Local Communities of the Eastern**

**Mediterranean** Aug 13 2022 Hellenism and the Local Communities of the Eastern Mediterranean offers a timely re-examination of the relationship between Greek and non-Greek cultures in this region between 400 BCE and 250 CE. The conquests of Alexander the Great and his Successors not only

radically reshaped the political landscape, but also significantly accelerated cultural change: in recent decades there has been an important historiographical emphasis on the study of the non-Greek cultures of the Eastern Mediterranean, but less focus on how Greek cultural elements became increasingly visible.

Although the process of cross-cultural interaction differed greatly across Asia Minor, Egypt, the Levant, and Mesopotamia, the same overarching questions apply: why did the non-Greek communities of the Eastern Mediterranean engage so closely with Greek cultural forms as well as political practices, and how did this engagement translate into their daily lives? In exploring the versatility and adaptability of Greek political structures, such as the polis, and the ways in which Greek and non-Greek cultures interacted in fields such as medicine, literature, and art, the essays in this volume aim to provide new insight into these questions. At the same time, they prompt a re-interrogation of the process of Hellenization, exploring whether it is still a useful concept for explaining and understanding the dynamics of cultural exchange in the Eastern Mediterranean of this period.

Restoring Natural Capital Apr 16 2020 How can environmental degradation be stopped? How can it be reversed? And how can the damage already done be repaired? The authors of this volume argue that a two-pronged approach is needed: reducing demand for ecosystem goods and services and better management of them, coupled with an increase in supply through environmental restoration. Restoring Natural Capital brings together economists and ecologists, theoreticians, practitioners, policy makers, and scientists from the developed and developing worlds to consider the costs and benefits of repairing ecosystem goods and services in natural and socioecological systems. It examines the business and practice of restoring natural capital, and seeks to establish common ground between economists and ecologists with respect to the restoration of degraded ecosystems and landscapes and the still broader task of restoring natural capital. The book focuses on developing strategies that can achieve the best outcomes in the shortest amount of time as it: • considers conceptual and

theoretical issues from both an economic and ecological perspective • examines specific strategies to foster the restoration of natural capital and offers a synthesis and a vision of the way forward Nineteen case studies from around the world illustrate challenges and achievements in setting targets, refining approaches to finding and implementing restoration projects, and using restoration of natural capital as an economic opportunity. Throughout, contributors make the case that the restoration of natural capital requires close collaboration among scientists from across disciplines as well as local people, and when successfully executed represents a practical, realistic, and essential tool for achieving lasting sustainable development.

Foundations of Macroeconomics Books a la Carte Jun 18 2020

**Real Analysis with Economic Applications** Feb 07 2022 There are many mathematics textbooks on real analysis, but they focus on topics not readily helpful for studying economic theory or they are inaccessible to most graduate students of economics. Real Analysis with Economic Applications aims to fill this gap by providing an ideal textbook and reference on real analysis tailored specifically to the concerns of such students. The emphasis throughout is on topics directly relevant to economic theory. In addition to addressing the usual topics of real analysis, this book discusses the elements of order theory, convex analysis, optimization, correspondences, linear and nonlinear functional analysis, fixed-point theory, dynamic programming, and calculus of variations. Efe Ok complements the mathematical development with applications that provide concise introductions to various topics from economic theory, including individual decision theory and games, welfare economics, information theory, general equilibrium and finance, and intertemporal economics. Moreover, apart from direct applications to economic theory, his book includes numerous fixed point theorems and applications to functional equations and optimization theory. The book is rigorous, but accessible to those who are relatively new to the ways of real analysis. The formal exposition is accompanied by discussions that describe the basic ideas in relatively heuristic terms, and by more than 1,000 exercises of varying difficulty. This book will be an indispensable resource in courses on mathematics for economists and as a reference for graduate students working on economic theory.
