Edition (2020) Building Codes Illustrated 2021 Existing Building Code Essentials

A practical tool that helps you to master the code you deal with every day! This comprehensive publication provides a convenient reference for regulations in the 2021 International Existing Building Code® (IEBC®). No other resource—not even the building code—presents the exact code information you need, when you need it at design stage. The International Building Code (IBC) is a model building code developed by the International Code Council (ICC). The IBC and its complementary codes provide design and construction professionals with a complete set of comprehensive, coordinated building safety and fire prevention regulations in order to safeguard the public health and general welfare of the occupants of new and existing buildings and structures. Adopted throughout most of the United States and its territories, it is referenced by federal agencies, such as the General Services Administration, National Park Service, Department of State, U.S. Forest Service, and the Department of Defense. For architects and other design and construction professionals, it is particularly important that they understand how to apply the IBC and how code officials view buildings, so that they integrate code-required provisions in the earliest design stages of any project. Applying the IBC, as well as its companion codes, to building design is a process that is uniquely different to that of applying the building code during a planning review. Whereas other guide books explain the IBC in sequential order, from cover to cover, chapter by chapter, and section by section, *Applying the Building Code* explains the requirements of the IBC as they would apply during the common phases of design: from schematic design through to the preparation of construction documents. This effectively highlights applicable requirements of the building code at the appropriate stage of design based on available information. The book provides a 28-step process that is organized according to the three phases of architectural design: schematic design, design development, and construction documents. Each step explains the application of the IBC, as well as other codes and standards referenced by the IBC (i.e. International Fire Code, International Energy Conservation Code, and ANSI A117.1) based on available project information. Illustrations and examples are provided throughout that explain the code fundamentals associated with each step. A single example project is used throughout the step-by-step process to

illustrate how each step is applied and builds upon code and project information obtained through previous steps. Guidance is also provided on the International Existing Building Code and how the step-by-step process is applied to projects involving existing buildings. The role of the building department and its staff in regard to plan reviews and code enforcement is discussed. A detailed code data information template is provided that can help organize code-related information for construction documents.

2009 International Existing Building Code Commentary is a powerful reference tool that will provide an in-depth understanding of the meanings and implications of the regulations set forth by the 2009 International Existing Building Code (IEBC). Using the same format that has made the International Code Council's Code & Commentary series so effective, the book presents the full text of the code, its tables and figures, and follows each section with an insightful commentary. These commentaries offer a closer look at what the code truly means, including suggestions for successfully applying it, and the consequences of not adhering to it. The end result is a strong reference guide that is a must-have for code officials, engineers, architects, inspectors, plans examiners, and contractors, and anyone interested in advancing their knowledge and use of the 2009 IEBC. Encourages the use and reuse of existing buildings. This code covers repair, alteration, addition and change of occupancy for existing buildings and historic buildings, while achieving appropriate levels of safety without requiring full compliance with the new construction requirements contained in the other I-Codes. Key changes include: Section 410 Accessibility has been relocated to a new Section 305. Chapters 4, 5, 6, 13 and 14 have been relocated resulting in a reorganization and new chapter numbering. Requirements for live loads from Chapters 4 and 8 have been combined and placed in Chapter 3 to apply for all compliance methods. Structural components damaged by snow events must be repaired assuming snow loads for new buildings from the IBC. A new exception is added for loading of existing structural elements next to an addition in buildings designed using the IRC. When a work area includes more than half the building in an alteration, wall anchors must be installed at the roof line along reinforced concrete and masonry walls. Buildings undergoing a change of occupancy shall have live, snow, wind and seismic loads checked. Design loads are based on IBC-level forces. When a change of occupancy occurs placing a building in a higher risk category, the seismic loads on the building must be evaluated using IBC-level forces. Access to the building must be maintained when passing through or near other buildings and structures. Where storm shelters are required based on IBC and ICC 500 for Group E Occupancies, any addition to such existing occupancies where the occupant load of the addition is 50 or more will trigger the construction of a storm shelter. Carbon Monoxide provisions have been added in the Prescriptive Method Additions, Alterations Level 2 Additions, and in Additions for I-1, I-2, I-4 and R Occupancies. The 2021 IECC addresses energy efficiency on several fronts including cost, energy usage, use of natural resources and the impact of energy usage on the environment. The 2006 International Existing Building code contains requirements intended to encourage the use and reuse of existing buildings. The scope covers repair, alteration, addition, and change of occupancy for existing buildings and historic buildings, while achieving appropriate levels of safety without requiring full compliance with the new construction requirements in the building code. Ching and well known architect Steven R. Winkel deliver a beautifully illustrated and intuitively written handbook for the 2021 International Building Code (IBC). The authors provide brand new chapters on plumbing fixture counts, elevators, special construction, and existing buildings while updating the remainder of the material to align with recent changes to the IBC. Easy to navigate and perfect as a quick-reference guide to the IBC, *Building Codes Illustrated* is a valuable visual resource for emerging professionals. The book also includes: Thorough introductions to navigating the Code, use and occupancy, special uses and occupancies, and building heights and areas Full explorations of the types of construction, fire resistive construction, interior finishes, fire-protection systems, and means of egress Practical discussions of accessibility, interior environment, exterior walls, roof assemblies, and structural provisions In-depth examinations of special inspections and tests, soils and foundations, building materials and systems, and elevators Perfect for students of architecture, interior design, construction, and engineering, the latest edition of *Building Codes Illustrated* is also ideal for professionals in these fields seeking an up-to-date reference on the 2021 International Building Code. Offers the latest regulations on designing and installing commercial and residential buildings. "The complete IEBC with commentary after each section." Learn to apply the International Building Code and International Existing Building Code to historic buildings Written for architects, engineers, preservation, and code enforcement professionals, this is the only comprehensive book that examines how the International Building Code (IBC) and the International Existing Building Code (IEBC) can be applied to historic and existing buildings. For ease of use, the book is organized to parallel the structure of the IEBC itself, and the approach is cumulative, with the objective of promoting an understanding of the art of applying building regulations to the environment of existing buildings. *Building Codes for Existing and Historic Buildings* begins with a discussion of the history of building regulations in the United States and the events and conditions that

created them. Next, it provides thorough coverage of: The rationale behind code provisions and historic preservation principles Major building code requirements: occupancy and use, types of construction, and heights and areas Building performance characteristics: fire and life safety, structural safety, health and hygiene, accident prevention, accessibility, and energy conservation Case study projects that reinforce the material covered Additionally, the book includes building analysis worksheets both blank and filled-in versions with examples that illustrate how to develop a code approach for an individual building. If you are a professional at any level who is working on creating a plan that meets the intent of the code for historic or existing buildings, Building Codes for Existing and Historic Buildings gives you everything that you need to succeed. Offers the latest regulations on designing and installing commercial and residential buildings. "A member of the International Code Family." The 2003 International Existing Building code (IEBC) contains requirements for improving and upgrading existing buildings to conserve resources and building history while achieving appropriate levels of safety. This is a comprehensive, excellent reference for code officials, engineers, architects, inspectors, plans examiners, contractors and anyone who needs a better understanding of these regulations. Fully compatible with all the International Codes, the 2003 IEBC provides up-to-date, comprehensive coverage that establishes minimum regulations for building systems using prescriptive- and performance-related provisions. Encourages the use and reuse of existing buildings. This code covers repair, alteration, addition and change of occupancy for existing buildings. and historic buildings, while achieving appropriate levels of safety without requiring full compliance with the new construction requirements contained in the other I-Codes. Key changes in the 2021 IEBC include: For storm shelters, the required occupant capacity is now limited to the total occupant load of the classrooms, vocational rooms and offices in the school while the maximum distance of travel was deleted. When significant portions of a building's exterior wall coverings or exterior wall envelope are added or replaced, they must comply with the requirements of

Chapters 14 and 26 of the IBC. Snow loads must be addressed during repair of substantial structural damage regardless of whether the damage was a result of snow. Additions, Level 3 alterations and Changes of occupancy in Educational occupancies are now required to meet the enhanced classroom acoustic requirements of Section 808 of ICC A117.1. Additional equipment may be added to a roof without a full structural analysis when the equipment weighs less than 400 pounds and is less than 10 percent of the total roof dead load. With a change of occupancy, a seismic analysis is required for a Group S or Group U occupancy changing to a new occupancy. Furniture, such as office cubicles, reception desks or smaller bookcases, are exempt from a permit and not intended to be a Level 2 alteration. Sprinkler requirements for Level 2 and Level 3 alterations are revised for higher hazard areas.
