This comprehensive guide to Steampunk creations of all kinds offers inspiration and practical tips for bringing your own retro-futuristic visions to life. Whether you're a newbie to the world of Steampunk, or a long-time enthusiast of airships, goggles, and mad scientists, The Steampunk User's Manual is essential reading. The popular subgenre of science fiction has grown into a cultural movement; one that invites fans to let their imaginations go wild. In this volume, Jeff VanderMeer—the renowned expert in all things Steampunk—presents a practical and inspirational guidance for finding your own path into this realm. Including sections on art, fashion, architecture, crafts, music, performance, and storytelling, The Steampunk User's Manual provides a conceptual how-to guide on everything from the utterly doable to the completely over-the-top. This is a user's manual for producing simulated radar images (SRIM) of computer-modeled objects. It uses a solid modeler to build a target and estimates the electromagnetic scattering of the radar wave using ray-tracing and physical optics. The Simulated Radar Image SRIM software is a prototype system consisting of several programs set up to run as a production system. This document describes how the SRIM programs are set up and run. The intent is to provide the user with the information to produce simulated radar images from a target description such as engineering drawings. All of the SRIM software is written in VAX FORTRAN 77. The DEC extensions to FORTRAN have been avoided to aid transportability. SRIM is currently running on a VAX/780 under VMS 4.x and uses a 300 Mb disk. A magnetic tape can be used instead of the disk but execution speed will be reduced. Section 3 describes the individual programs more fully. The inputs and outputs for each program are given, especially the user inputs. Section 4 contains information needed to quantitatively define the SRIM system user inputs. The emphasis is on how the values for the user inputs are determined. The section contains an example showing how the user inputs are determined for a specific SRIM simulation. (kr). This report describes software for performing image enhancement on live or recorded video images. The software was developed for operational use during underwater recovery operations at the Naval Undersea Warfare Engineering Station. The image processing is performed on an IBM-PC/AT compatible computer equipped with hardware to digitize and display video images. The software provides the capability to provide contrast enhancement and other similar functions in real time through hardware lookup tables, to automatically perform histogram equalization, to capture one or more frames and average them or apply one of several different processing algorithms to a captured frame. The report is in the form of a user manual for the software and includes guided tutorial and reference sections. A Digital Image Processing Primer in the appendix serves to explain the principle concepts that are used in the image processing. (rrh). We can't stop constantly checking it on our computer screens, but what is this doing to our minds? We are never really taught how to make sense of the torrent of news we face every day, writes Alain de Botton (author of the best-selling The Architecture of Happiness), but this has a huge impact on our sense of what matters and of how we should lead our lives. In his dazzling new book, de Botton takes twenty-five archetypal news stories—including an airplane crash, a murder, a celebrity interview and a political scandal—and submits them to unusually intense analysis with a view to helping us navigate our news-soaked age. He raises such questions as Why are disaster stories often so uplifting? What makes the love lives of celebrities so interesting? Why do we enjoy watching politicians being brought down? Why are upheavals in far-off lands often so boring? In The News: A User's Manual, de Botton has written the ultimate guide for our frenzied era, certain to bring calm, understanding and a measure of sanity to our daily (perhaps even hourly) interactions with the news machine.
