Latin for the New Millennium: Level 2: student text Sep 15 2022 "Latin for the New Millennium, Levels 1 and 2 is a complete introductory course to the Latin language, suitable for both high school and college students, consisting of two volumes, each accompanied by a teacher's manual and students' workbooks. The strategy employed for teaching and learning incorporates the best of both the reading approach and the more abstract grammatical method. The choice of vocabulary in each chapter reflects ancient authors commonly studied for the AP Latin examinations. There are exercises designed for oral use, as well as a substantial core of more conventional exercises in each chapter. The readings, pictures, and supplementary inserts on cultural information illuminate Roman life, civilization, Roman history, and mythology, as well as the continuing use of Latin after antiquity and its vigorous literary tradition in such periods as the Middle Ages and Renaissance. Each chapter also includes derivatives, the influence of Latin vocabulary on English, and selected proverbs or common Latin sayings. Latin for the New Millennium Level 3 builds on the strong foundation of Levels 1 and 2 and provides students an in-depth experience of Caesar, Catullus, Cicero, Horace, Ovid, and Vergil as well as of the Renaissance writer Erasmus. Modern Psychometrics with R Jul 01 2021 This textbook describes the broadening methodology spectrum of psychological measurement in order to meet the statistical needs of a modern psychologist. The way statistics is used, and maybe even perceived, in psychology has drastically changed over the last few years; computationally as well as methodologically. R has taken the field of psychology by storm, to the point that it can now safely be considered the lingua franca for statistical data analysis in psychology. The goal of this book is to give the reader a starting point when analyzing data using a particular method, including advanced versions, and to hopefully motivate him or her to delve deeper into additional literature on the method. Beginning with one of the oldest psychometric model formulations, the true score model, Mair devotes the early chapters to exploring confirmatory factor analysis, modern test theory, and a sequence of multivariate exploratory method. Subsequent chapters present special techniques useful for modern psychological applications including correlation networks, sophisticated parametric clustering techniques, longitudinal measurements on a single participant, and functional magnetic resonance imaging (fMRI) data. In addition to using real-life data sets to demonstrate each method, the book also reports each method in three parts-- first describing when and why to apply it, then how to compute the method in R, and finally how to present, visualize, and interpret the results. Requiring a basic knowledge of statistical methods and R software, but written in a casual tone, this text is ideal for graduate students in psychology. Relevant courses include methods of scaling, latent variable modeling, psychometrics for graduate students in Psychology, and multivariate methods in the social sciences.
