Award-winning author, Samuel S. Epstein, M.D., whose 1978 book
""The Politics of Cancer"" shook the political establishment by
showing how the federal government had been corrupted by
industrial polluters, has written a book that is sure to be of equal
consequence. ""Cancer-Gate: How to Win the Losing Cancer War"" is a
groundbreaking new book. It warns that, contrary to three decades of
promises, we are losing the winnable war against cancer, and that the
hand-in-glove generals of the federal National Cancer Institute (NCI)
and the private ""nonprofit"" American Cancer Society (ACS) have
betrayed us. These institutions, Epstein alleges, have spent tens of
billions of taxpayer and charity dollars primarily targeting silver-
bullet cures, strategies that have largely failed, while virtually

ignoring strategies for preventing cancer in the first place. As a result, cancer rates have escalated to epidemic proportions, now striking nearly one in every two men, and more than one in every three women. This translates into approximately 50 percent more cancer in men, and 20 percent more cancer in women over the course of just one generation. Draws on the expertise of eight doctors whose cutting-edge methods are enabling unprecedented cures, sharing the celebrity author's personal experiences as well as the survival stories of other cancer patients while identifying lifestyle strategies and challenging mainstream practices. By the best-selling author of *Ageless*. Explores the difficult choices that nurses face after years of practice, in the story of three nurses, former college mates who meet ten years later in a large metropolitan hospital "Katey Hansen's book provides a balanced view of the Mexican clinics and what they have to offer international cancer patients. It is a mature, wise and engaging look at an often hotly debated topic. It avoids all sensationalism and thus can be recommended to all cancer patients contemplating treatment in a foreign location." - Ralph W. Moss, Ph.D.

Why are thousands of people with cancer, especially late stage cancer, refusing or discontinuing conventional cancer treatment and going to alternative and integrative clinics in Mexico? After years of helping people with cancer and having experienced a cancer scare of her own, Katey Hansen decided to investigate both the alternative and mainstream approaches to treating cancer. She traveled to Tijuana, Mexico, and visited fourteen of the better known and reputable clinics, met with the doctors, and spoke with current and past patients of these clinics. Her travels and research led her to answer questions such as: What are the commonly used alternative therapies and is there any proof that they are effective? What are the success rates of the alternative/integrative clinics in Tijuana? Is it safe to travel to Mexico for cancer treatment? How expensive is alternative cancer treatment in Mexico? Does health insurance cover any of the cost? What are the qualifications of the physicians at the clinics in Tijuana? Why can some therapies be used in Mexico, but not

in the United States and other countries? How effective is chemotherapy and radiation therapy, especially for later stage cancer? How many cancer patients currently benefit from the newer gene targeted therapies and immunotherapies? Are they safer and more effective than chemotherapy? With cancer becoming close to epidemic in the United States and other developed nations, "Hoping for a Cure" is an empowering, educational and hopeful book for anyone who has been touched by cancer or who is concerned about someday hearing the words "You have cancer". The author calls for a revolution in health care, criticizing its hostility to alternative medicine and its bias against women. Focuses on the true-life stories of seven women as they make critical decisions and cope with the physical and emotional effects of the disease Updated for 2012, this book, Dr. Neil McKinney's fourth on naturopathic oncology, is updated with the rewards of clinical practice, study, research and reader feedback over the last several years. Patients and integrative physicians will find it easier to navigate, more complete, and of real service. DO: use this book to be informed about your best options, and what to expect them to accomplish. THEN: get expert guidance from a licensed, accountable, health professional team experienced in treating cancer. Cancer is a life-threatening disease in most cases. You do not have the objectivity, experience or knowledge to make critical medical decisions alone. This is not just a legal disclaimer! Cancer is unforgiving of delays and poor choices. In the future there will be two groups of cancer patients. Those who have read this book - and those who are uninformed. For many years Lothar Hirneise has been traveling throughout the world looking for the most successful cancer therapies, and he has been explaining to people that there is much more available than just chemotherapy and irradiation. Recognized internationally as Europe's leading specialist in this area, he describes the results of his years of research in this encyclopedia of non-conventional therapies. The reader will also learn in detail why so-called experts in reality know little about cancer. In addition to descriptions of more than 100 cancer therapies and substances used

in treating cancer, the author also explains which cancer therapies are used allopathically, for which types of cancer, and what is imperative for a patient to know before he subjects himself to such therapies. The 3E program, which is based on the analysis of case histories of thousands of people who have survived late stage cancer, is also described for the first time. Learn why so many people die of cancer, and why so many others do not. This book not only supplies an incredible amount of information, it also helps the cancer patient to find his own way to cure cancer through the active exercises of the 3E program. One of every four deaths occurring in the United States today is due to cancer, and the number of diagnoses continues to increase. Fortunately, however, cancer treatments are improving, which means more and more patients are surviving for longer periods. Complementary methods have played an important role in these treatments, showing benefits such as a higher quality of life, reduced instance and severity of the side effects of standard therapy, and a general improvement of the patient's immunological state. Indeed, these methods - from carefully monitored nutrition, exercise, and psychological support to enzyme substitution, phytotherapy, hyperthermia and microbiology therapy - are critical to a treatment's overall success. More than ever, doctors need accurate, up-to-date information about which methods have been proven in scientifically based clinical studies (EBM) to be acceptable for use in conjunction with standard treatment methods. In this unique book, experts ranging across medical disciplines present data on the efficacy of these methods as they are currently being used, the necessary scientific background, and practical advice for introducing them into practice. With illustrations, tables, and detailed descriptions, this book is an ideal reference and an invaluable tool for educating patients about this encouraging aspect of cancer therapy. Throughout, the contributors emphasize the latest scientifically and clinically tested treatments. A useful chart lays out in detail which treatments are applicable for various types of cancers and what effects they have been shown to cause. The word is out about the

beneficial qualities of complementary therapies in the treatment of cancer. More physicians are offering it to their patients, and more and more patients are demanding it. You - and your patients - cannot afford to be without this valuable resource. Is cancer a contagious disease? In the late nineteenth century this idea, and attending efforts to identify a cancer “ germ, ” inspired fear and ignited controversy. Yet speculation that cancer might be contagious also contained a kernel of hope that the strategies used against infectious diseases, especially vaccination, might be able to subdue this dread disease. Today, nearly one in six cancers are thought to have an infectious cause, but the path to that understanding was twisting and turbulent. *A Contagious Cause* is the first book to trace the century-long hunt for a human cancer virus in America, an effort whose scale exceeded that of the Human Genome Project. The government ’ s campaign merged the worlds of molecular biology, public health, and military planning in the name of translating laboratory discoveries into useful medical therapies. However, its expansion into biomedical research sparked fierce conflict. Many biologists dismissed the suggestion that research should be planned and the idea of curing cancer by a vaccine or any other means as unrealistic, if not dangerous. Although the American hunt was ultimately fruitless, this effort nonetheless profoundly shaped our understanding of life at its most fundamental levels. *A Contagious Cause* links laboratory and legislature as has rarely been done before, creating a new chapter in the histories of science and American politics. Despite the rising popularity of the minimally invasive laparoscopic option, open nephron-sparing surgery is still seen by many experts as the 'gold standard' for open surgery for kidney tumors and should remain the first choice for many patients. This challenges the idea that less-invasive therapies are always more desirable than open surgery. Why

"Jane McLelland was only 30 when she was diagnosed with cancer. A few years later it was stage 4 (or terminal) and had spread to her lungs. Expected to live 12 weeks, she refused to believe there weren't any effective drugs or therapies. Her scientific training meant she was

able to examine and digest hundreds of research papers she found in libraries, journals and online - and the conclusion she reached astonished her ... This is the story of how she took on her illness, changed her diet, educated herself, persuaded her oncologist and other doctors to prescribe her an unusual cocktail of commonly used drugs - some of which are already in many people's medicine cabinets - these made the difference between life and death

..."--Publisher description. "This is the first book written by a doctor for the layperson that addresses the medicine, the practical issues, and the psychosocial elements of recovery after cancer treatment. The author, a cancer survivor herself, understands that surviving cancer is more than just killing cancer cells and getting through treatment. Patients must deal with the emotional, social, spiritual, and financial fallout of a cancer diagnosis. By helping survivors understand that they can't go back to where they were before cancer, she liberates them to move forward to a different, "new normal.""

"Writing in a reader-friendly, question-and-answer format, Dr. Wendy Harpham addresses a wide range of issues realistically yet hopefully. Among them are understanding the medicine of reevaluation, follow-up, and prevention after treatment; dealing with the most common physical aftereffects of treatment; learning how to make decisions about work and school; relating to friends and family; helping children deal with parents' cancer; and coping with the practicalities of living wills and insurance. An important section on post-cancer fatigue will be of special interest to patients who find that exhaustion is one of the most difficult problems with which they deal."--BOOK

JACKET.Title Summary field provided by Blackwell North America, Inc.

All Rights Reserved "In the wake of the Cancer Genome Atlas project's failure to provide a legible road map to a cure for cancer, science writer Travis Christofferson illuminates a promising blend of old and new perspectives on the disease. 'Tripping Over the Truth' follows the story of cancers proposed metabolic origin from the vaunted halls of the German scientific golden age, to modern laboratories around the world. The reader is taken on a journey through time and science that

results in an unlikely connecting of the dots with profound therapeutic implications." --Cover. The easy-to-use format directs you to the most useful, intriguing, and sometimes off-beat sites on-line. A groundbreaking look at marriage, one of the most basic and universal of all human institutions, which reveals the emotional, physical, economic, and sexual benefits that marriage brings to individuals and society as a whole. The Case for Marriage is a critically important intervention in the national debate about the future of family. Based on the authoritative research of family sociologist Linda J. Waite, journalist Maggie Gallagher, and a number of other scholars, this book 's findings dramatically contradict the anti-marriage myths that have become the common sense of most Americans. Today a broad consensus holds that marriage is a bad deal for women, that divorce is better for children when parents are unhappy, and that marriage is essentially a private choice, not a public institution. Waite and Gallagher flatly contradict these assumptions, arguing instead that by a broad range of indices, marriage is actually better for you than being single or divorced— physically, materially, and spiritually. They contend that married people live longer, have better health, earn more money, accumulate more wealth, feel more fulfillment in their lives, enjoy more satisfying sexual relationships, and have happier and more successful children than those who remain single, cohabit, or get divorced. The Case for Marriage combines clearheaded analysis, penetrating cultural criticism, and practical advice for strengthening the institution of marriage, and provides clear, essential guidelines for reestablishing marriage as the foundation for a healthy and happy society. “ A compelling defense of a sacred union. The Case for Marriage is well written and well argued, empirically rigorous and learned, practical and commonsensical. ” -- William J. Bennett, author of The Book of Virtues “ Makes the absolutely critical point that marriage has been misrepresented and misunderstood. ” -- The Wall Street Journal www.broadwaybooks.com Learn how antioxidants reduce the side-effects of chemotherapy and may even make it more effective. The

Optimal Terrain Ten Protocol to Reboot Cellular Health Since the beginning of the twentieth century, cancer rates have increased exponentially--now affecting almost 50 percent of the American population. Conventional treatment continues to rely on chemotherapy, surgery, and radiation to attack cancer cells. Yet research has repeatedly shown that 95 percent of cancer cases are directly linked to diet and lifestyle. The Metabolic Approach to Cancer is the book we have been waiting for--it offers an innovative, metabolic-focused nutrition protocol that actually works.

Naturopathic, integrative oncologist and cancer survivor Dr. Nasha Winters and nutrition therapist Jess Higgins Kelley have identified the ten key elements of a person's "terrain" (think of it as a topographical map of our body) that are crucial to preventing and managing cancer. Each of the terrain ten elements--including epigenetics, the microbiome, the immune system, toxin exposures, and blood sugar balance--is illuminated as it relates to the cancer process, then given a heavily researched and tested, non-toxic and metabolic, focused nutrition prescription. The metabolic theory of cancer--that cancer is fueled by high carbohydrate diets, not "bad" genetics--was introduced by Nobel Prize-laureate and scientist Otto Warburg in 1931. It has been largely disregarded by conventional oncology ever since. But this theory is resurging as a result of research showing incredible clinical outcomes when cancer cells are deprived of their primary fuel source (glucose). The ketogenic diet--which relies on the body's production of ketones as fuel--is the centerpiece of The Metabolic Approach to Cancer. Further, Winters and Kelley explain how to harness the anticancer potential of phytonutrients abundant in low-glycemic plant and animal foods to address the 10 hallmarks of cancer--an approach Western medicine does with drug based therapies. Their optimized, genetically-tuned diet shuns grains, legumes, sugar, genetically modified foods, pesticides, and synthetic ingredients while emphasizing whole, wild, local, organic, fermented, heirloom, and low-glycemic foods and herbs. Other components of their approach include harm-reductive herbal therapies like mistletoe

(considered the original immunotherapy and common in European cancer care centers) and cannabinoids (which shrink tumors and increase quality of life, yet are illegal in more than half of the United States). Through addressing the ten root causes of cancer and approaching the disease from a nutrition-focused standpoint, we can slow cancer's endemic spread and live optimized lives. This gripping and controversial classic exposes the political and economic forces inside the cancer establishment. While scientists win occasional skirmishes in the battle against cancer, the overall war continues to go badly. Stories abound about revolutionary drugs that may be available in the future, but offer no real help to those who have cancer today. At present, conventional approaches continue to rely on a narrowly focused strategy of treatments, with doctors using, at best, only one or two drugs or other therapies at a time. While this may be acceptable in a laboratory setting or a clinical trial, it has done little to diminish the number of people who die each year from this dread disease. Recently, however, conventional medicine's core strategy has been re-examined, and a new, potentially more effective approach has emerged—one that combines the best of Eastern wisdom with Western science. *Beyond the Magic Bullet—The Anti-Cancer Cocktail* by Dr. Raymond Chang takes a penetrating look at this bold new way of treating cancer. The book begins by examining modern medicine's use of surgery, radiation, chemotherapy, hormone therapy, and targeted drugs in the war against cancer. It then offers a new therapy based on the knowledge that certain off-label drugs, nutrients, and therapies are each somewhat effective against cancer. By combining these therapeutic agents into a "cocktail," doctors have found that they can attack the cancer all at once, on many different levels and at several different angles, with the goal of overwhelming the disease. Dr. Chang not only discusses the effectiveness of the cocktail, but also provides an examination of the most valuable agents available. For over a thousand years, Traditional Chinese Medicine has used the cocktail approach to safely and effectively fight disease. Throughout the world, the most

successful treatments for HIV and Hepatitis C are based on this strategy. *Beyond the Magic Bullet—The Anti-Cancer Cocktail* leads the way to a bright new future of hope and healing. For twelve years, Dr. AbulKalam Shamsuddin and his colleagues, sponsored in part by the American Institute for Cancer Research, have been performing ground-breaking experiments on the B vitamin inositol and its derivative, IP(6), a natural component of grains such as rice, corn, and wheat, and legumes such as soybeans. After astounding results in the laboratory, IP(6) is finally available to the public as an anti-cancer nutrient. In this exciting new book, the author uses clear, easy-to-understand language to explain how this all-natural cancer fighter works to kill cancer cells, shrink tumors, and boost the immune system's defenses. Plus, Dr. Shamsuddin explains how IP(6) alone, or combined with inositol, has dramatic health benefits for diabetics and sufferers of sickle cell anemia. He also produces test results for its ability to prevent kidney stones, lower cholesterol and triglyceride levels, fight infection, and reduce the risks of heart disease. This thorough guide is a must-read for cancer patients and their families seeking treatment options. Today he is known as Dr. Q, an internationally renowned neurosurgeon and neuroscientist who leads cutting-edge research to cure brain cancer. But not too long ago, he was Freddy, a nineteen-year-old undocumented migrant worker toiling in the tomato fields of central California. In this gripping memoir, Alfredo Quiñones-Hinojosa tells his amazing life story—from his impoverished childhood in the tiny village of Palaco, Mexico, to his harrowing border crossing and his transformation from illegal immigrant to American citizen and gifted student at the University of California at Berkeley and at Harvard Medical School. Packed with adventure and adversity—including a few terrifying brushes with death—*Becoming Dr. Q* is a testament to persistence, hard work, the power of hope and imagination, and the pursuit of excellence. It ' s also a story about the importance of family, of mentors, and of giving people a chance. Dr. Keith Block is at the global vanguard of innovative cancer care. As medical director of the

Block Center for Integrative Cancer Treatment in Evanston, Illinois, he has treated thousands of patients who have lived long, full lives beyond their original prognoses. Now he has distilled almost thirty years of experience into the first book that gives patients a systematic, research-based plan for developing the physical and emotional vitality they need to meet the demands of treatment and recovery. Based on a profound understanding of how body and mind can work together to defeat disease, this groundbreaking book offers:

- Innovative approaches to conventional treatments, such as “chronotherapy” –chemotherapy timed to patients’ unique circadian rhythms for enhanced effectiveness and reduced toxicity
- Dietary choices that make the biochemical environment hostile to cancer growth and recurrence, and strengthen the immune system’s ability to attack remaining cancer cells
- Precise supplement protocols to tame treatment side effects, relieve disease-related symptoms, and modify processes like inflammation and glycemia that can fuel cancer if left untreated
- A new paradigm for exercise and stress reduction that restores your strength, reduces anxiety and depression, and supports the body’s own ability to heal
- A complete program for remission maintenance—a proactive plan to make sure the cancer never returns

Also included are “quick-start” maps to help you find the information you need right now and many case histories that will support and inspire you. Encouraging, compassionate, and authoritative, *Life over Cancer* is the guide patients everywhere have been waiting for. Cancer can be beaten with natural medicine, and this insider's guide will show you how. Dr Lam is a western-trained medical doctor whose clinical practice in natural medicine has helped many overcome and prevent cancer. In this easy to read book, you will learn first hand the science, the research, and specific protocols on how you can start using natural medicine today together with or in place of conventional medicine to beat cancer. Whether your cancer is active or in remission, this is a must read if you want to win the battle against cancer. A revealing critique of chemotherapy, this book looks

objectively at chemo's successes and failures. "Cancer Action Plan" is a new generation of cancer therapy information and should be the first port of call for any person suffering with cancer. The authors present information about a wide selection of the most important unconventional therapies. A leader of dream workshops and seminars details a unique, nine-step approach to understanding dreams, using contemporary dreamwork techniques developed from shamanic cultures around the world. Conscious Dreaming shows you how to use your dreams to understand your past, shape your future, get in touch with your deepest desires, and be guided by your higher self. Author Robert Moss explains how to apply shamanic dreamwork techniques, most notably from Australian Aboriginal and Native American traditions, to the challenges of modern life and embark on dream journeys. Moss's methods are easy, effective, and entertaining, animated by his skillful retelling of his own dreams and those of his students—and the dreams' often dramatic insights and outcomes. According to Moss, some shamans believe that nothing occurs in ordinary reality unless it has been dreamed first. In the dreamscape, we not only glimpse future events, we can also develop our ability to choose more carefully between possible futures. Conscious Dreaming's innovative system of dream-catching and transpersonal interpretation, of dream re-entry and keeping a dream journal enables the reader to tap the deepest sources of creativity and intuition and make better choices in the critical passages of life. The first full-scale expose of one of the major scientific scandals of the 20th century, by a man who was there at the time and who helped reveal the cover-up. "The Politics of Cancer Revisited," by internationally renowned authority on cancer causes and preventions, Samuel S. Epstein, M.D., backed by meticulous documentation, charges that the cancer establishment remains myopically fixated on damage control--diagnosis and treatment, and basic genetic research with, not always benign, indifference to cancer prevention research and failure of outreach to Congress, regulatory agencies, and the public with scientific information on unwitting

exposures to a wide range of avoidable causes of cancer. The National Cancer Institute (NCI) and the American Cancer Society (ACS) are also accused of pervasive conflicts of interest, particularly with the cancer drug industry. "By the time you're done reading this book, you'll know: if surgery, chemotherapy or radiotherapy are effective treatments for cancer; if cancer screening programs save lives or result in mass over-diagnosis and over-treatment; if the cancer industry has suppressed cures or effective treatments from the public"--Back cover. Here is the book that revolutionized the way allergies and other common illnesses were diagnosed and treated. Customized Cancer Treatment is the first book for the layperson on chemosensitivity testing. This is a laboratory procedure by which patients and their doctors can discover which drugs are mostly like to work for them and which to avoid. Chemosensitivity testing is very effective at finding the best drugs for each individual. It is a form of personalized treatment. According to Dr. Robert Nagourney, No cancer patient should begin treatment without first reading this book. This is a story about a young woman with a very common but deadly illness who did a very uncommon thing when faced with that disease. She disagreed with her doctors, rejected their treatment advice, and chose her own path to getting well again. She did this in the face of paralyzing fears of dying and leaving behind a motherless daughter. She did this in the face of the daunting task of researching and choosing a better treatment. She did this in the face of the intense pressures of social conformity telling her to listen to her doctors. What she did was extraordinarily brave and forward-thinking. In effect, she forged a better path through a thicket of fear, complexity, and pressure. She forged this path with the help of her husband, working as a team and exhibiting unyielding togetherness. This book chronicles the journey they took together, back to health. Herbs Against Cancer is a comprehensive and indispensable guide to the use of herbs in preventing and treating cancer.
