In this engaging and provocative new book, Lee Eisenberg, bestselling author of *The Number*, dares to tackle nothing less than what it takes to find enduring meaning and purpose in life. He explains how from a young age, each of us is compelled to take memories of events and relationships and shape them into a one-of-a-kind personal narrative. In addition to sharing his own pivotal memories (some of them moving, some just a shade embarrassing), Eisenberg presents striking research culled from psychology and neuroscience, and draws on

insights from a pantheon of thinkers and great writers-Tolstoy, Freud, Joseph Campbell, Virginia Woolf, among others. We also hear from men and women of all ages who are wrestling with the demands of work and family, ever in search of fulfillment and satisfaction. It all adds up to a fascinating story, delightfully told, one that goes straight to the heart of how we explain ourselves to ourselves-in other words, who we are and why. In a witty and elegant autobiography that takes up where his bestselling Palimpsest left off, the celebrated novelist, essayist, critic, and controversialist Gore Vidal reflects on his remarkable life. Writing from his desks in Ravello and the Hollywood Hills, Vidal travels in memory through the arenas of literature, television, film, theatre, politics, and international society where he has cut a wide swath, recounting achievements and defeats, friends and enemies made (and sometimes lost). From encounters with, amongst others, Jack

and Jacqueline Kennedy, Tennessee Williams, Eleanor Roosevelt, Orson Welles, Johnny Carson, Francis Ford Coppola to the mournful passing of his longtime partner, Howard Auster, Vidal always steers his narrative with grace and flair. Entertaining, provocative, and often moving, Point to Point Navigation wonderfully captures the life of one of twentieth-century America's most important writers. Point and Figure charts are one of the great secrets of the Technical Analysis world. Highly sophisticated and with a thoroughbred pedigree, they can, however, be overlooked by traders today. Jeremy du Plessis - one of the foremost Point and Figure experts in the world - returns with a fully updated second edition of this definitive guide in an effort to redress this imbalance. This second edition, with an extensive revision to the text and introduction of brand new techniques, demystifies the world of Point and Figure charting. It includes a detailed explanation of the history and development of the technique from its invention to the modern day, and covers the makeup of the chart patterns, why they are created, and how to interpret them. Throughout, readers are encouraged to understand Point and Figure charts from first principles, rather than just remember the names of a series of patterns. It is the first major work for 50 years to discuss in depth the original 1-box reversal method of Point and Figure charting and contrast it with the more popular 3-box reversal method. Further, the explanation of how to use Point and Figure charts to project targets and calculate risk-reward ratios is the most comprehensive ever seen. Also featured in the second edition are: - A step-by-step analysis of the FTSE 100 Index using the 3-box method, as well as the NASDAQ Composite Index, using the 1-box method

- A detailed discussion of optimising techniques - An in-depth chapter on Analysing Point and Figure charts, extensively rewritten from the first edition - A new explanation of how Point and Figure parameters are chosen and the implications of choosing them - Two new Point and Figure construction methods never seen before - Point and Figure's contribution to market breadth, with a look at bullish percent and two brand new indicators - Full discussion of Point and Figure gaps and how they provide valuable information about the chart - Lesser known, more advanced techniques such as the use of moving averages, parabolic SAR and Bollinger Bands on Point and Figure charts - Price and volume activity histograms and how they provide information about support and resistance All this is illustrated with numerous colour charts and observations from years of trading experience. According to du Plessis, Point and Figure charts are the 'voice of the market'. This book helps you listen to, and understand, that voice. points, and for all those readers who know that this simple advice may be difficult to follow, he offers encouragement on such topics as: how to find something to say; the basics of organization, how to avoid sexist language; how much is enough; plagiarism; and basic grammar. Comprehensive coverage of elementary general topology as well as algebraic topology, specifically 2-manifolds, covering spaces and fundamental groups. Problems, with selected solutions. Bibliography. 1975 edition. A book without words, recounting a day in the life of an office worker, told completely in the symbols, icons, and logos of modern life. Twenty years ago I made *Book from the Sky*, a book of illegible Chinese characters that no one could read. Now I have created *Book from the Ground*, a book that anyone can read. —Xu Bing

Following his classic work *Book from the Sky*, the Chinese artist Xu Bing presents a new graphic novel—one composed entirely of symbols and icons that are universally understood. Xu Bing spent seven years gathering materials, experimenting, revising, and arranging thousands of pictograms to construct the narrative of *Book from the Ground*. The result is a readable story without words, an account of twenty-four hours in the life of “Mr. Black,” a typical urban white-collar worker. Our protagonist's day begins with wake-up calls from a nearby bird and his bedside alarm clock; it continues through tooth-brushing, coffee-making, TV-watching, and cat-feeding. He commutes to his job on the subway, works in his office, ponders various fast-food options for lunch, waits in line for the bathroom, daydreams, sends flowers, socializes after work, goes home, kills a mosquito, goes to bed, sleeps, and gets up the next morning to do it all over again. His day is recounted

with meticulous and intimate detail, and reads like a postmodern, post-textual riff on James Joyce's account of Bloom's peregrinations in *Ulysses*. But Xu Bing's narrative, using an exclusively visual language, could be published anywhere, without translation or explication; anyone with experience in contemporary life—anyone who has internalized the icons and logos of modernity, from smiley faces to transit maps to menus—can understand it. The aim of this book is to explain point-and-figure charting to European investors and traders, and to show why it is the most reliable technical tool for timing entry and exit points in stocks, indices and other securities. The book is written for all levels of trader, from the novice to the experienced. It starts by explaining the basics of point-and-figure, and by showing its advantages over other types of chart. Readers are then given step-by-step instructions on how to start a point-and-figure chart from simple price data, and how to add to it day-by-day using simple rules based on end of day highs and lows. The emphasis is on simplicity and clarity. The section on chart interpretation introduces the basic buy and sell signals, and goes on to explain the more complex signals, in each case illustrating the pattern, and the precise entry and exit points, with colour charts from FTSE stocks and indices. It also shows how trend lines are incorporated into a chart. The latest point-and-figure trading techniques are covered in depth. The authors show how to: use horizontal and vertical counts to estimate the size of price moves, use stop-orders to protect positions, use pyramiding to maximise profitable trends, and use swing trading in combination with p&f. They also show how to adapt your trading style to the amount of capital you have available and to your risk tolerance. In the later sections of the book, the authors concentrate on optimisation of p&f trading and the avoidance of the most common trap - 'over-fitting' - and on

analysis of the profitability of p&f trading. They demonstrate conclusively that point and figure, correctly applied, produces consistent and reliable profits across a variety of markets. In summary, Heinrich Weber & Kermit Zieg's book is the definitive guide to the theory and application of point-and-figure charting. It is especially welcome for UK and European traders, since it uses recent charts of FTSE and European securities as examples, and includes hitherto unpublished research on p&f's applicability to European securities.

How did the Turkish-Kurdish Conflict arise? Why have Turks and Kurds failed for so long to solve it? How can they solve it today? How can social scientists better analyze this and other protracted conflicts and propose better prescriptions for sustainable peace? *Return to Point Zero* develops a novel framework for analyzing the historical-structural and contemporary causes of ethnic-national conflicts, highlighting an understudied dimension: politics. Murat Somer argues that intramajority group politics rather than majority-minority differences better explains ethnic-national conflicts. Hence, the political-ideological divisions among Turks are the key to understanding the Turkish-Kurdish Conflict; though it was nationalism that produced the Kurdish Question during late-Ottoman imperial modernization, political elite decisions by the Turks created the Kurdish Conflict during the postimperial nation-state building. Today, ideational rigidities reinforce the conflict. Analyzing this conflict from "premodern" times to today, Somer emphasizes two distinct periods: the formative era of 1918–1926 and the post-2011 reformative period. Somer argues that during the formative era, political elites inadequately addressed three fundamental dilemmas of security, identity, and cooperation and includes a

discussion of how the legacy of those political elite decisions impacted and framed peace attempts that have failed in the 1990s and 2010s. *Return to Point Zero* develops new concepts to analyze conflicts and concrete conflict-resolution proposals. Some pieces use generative schemes, portraits of mental shapes, which create meaning out of noise. In "Hours" and "Setting, the Table," Field uses indeterminate performance techniques to emphasize the categorical/conceptual nature of thought. Visually, each chapter is captivating, showing both the author's need for shapes and colors in her work, and her fascination with the contours of speech."--BOOK JACKET.
