Review: "Now in its Fourth Edition, this best-selling text offers comprehensive coverage of all the major topics in introductory epidemiology. With extensive treatment of the heart of epidemiology - from study designs to descriptive epidemiology to quantitative measures - this reader-friendly text is

accessible and interesting to a wide range of beginning students in all health-related disciplines. A unique focus is given to real-world applications of epidemiology and the development of skills that students can apply in subsequent course work and in the field. The text is also accompanied by a complete package of instructor and student resources available through a companion Web site."--Jacket LGBTQ Issues in Education: Advancing a Research Agenda examines the current state of the knowledge on LGBTQ issues in education and addresses future research directions. The editor and authors draw on existing literature, theories, and data as they synthesize key areas of research. Readers studying LGBTQ issues or working on adjacent topics will find the book to be an invaluable tool as it sets forth major findings and recommendations for additional research. Equally important, the book brings to light the importance of investing in research and data on a topic of critical educational and social significance. This volume focuses on research and theoretical developments related to the role of geography in education, human development, and health. Multiple disciplinary perspectives provide the strengths and problems in our communities. Research in this presidential volume provides historical, moral, and scientifically based arguments to inform understandings of civic problems and possible solutions. Comparing Ethnographies presents cross-national comparisons that give researchers and students a fresh look at

familiar concepts. How does it matter, for example, to think in terms of "majorities" rather than "minorities, "migrants" rather than "immigrants, or"intercultural education" rather than "multicultural education"? How does indigenous education or the work of teachers look different to ethnographers from different countries of the Americas? This engaging new volume edited by Kathryn Anderson-Levitt and Elsie Rockwell includes essays from experts throughout the Americas which help readers understand and learn from ethnographic educational research conducted across the Western Hemisphere, and also includes a practical guide to finding the relevant literature. This book contains a collection of quantitative procedures in common use in pharmacology and related disciplines. It is intended for students and researchers in all fields who work with drugs. Many physicians, especially those concerned with clinical pharmacology, will also find much that is useful. The procedures included may be considered "core" since they are generally applicable to all classes of drugs. Some of the procedures deal with statistics and, hence, have even wider application. In this new edition we have increased the number of procedures from 33 (in the first edition) to 48. Other procedures have been revised and expanded. Yet the basic philosophy of this new edition remains unchanged from the first. That is, the pharmacologic basis of each procedure is presented, along with the necessary formulas

and one or more worked examples. An associated computer program is included for each procedure and its use is illustrated with the same worked example used in the text. The discussions of theory and the sample computations are brief and self-contained, so that all computations can be made with the aid of a pocket calculator and the statistical tables contained in Appendix A. Yet it is realized that the proliferation of lower-priced microcomputers is likely to mean that more and more readers will utilize a computer for most calculations. Accordingly, we have modified the format of the book to facilitate computer usage. Studying Diversity in Teacher Education is a collaborative effort by experts seeking to elucidate one of the most important issues

facing education today. The contributors address historically persistent issues such as understanding how to teach diversity, while also providing research and case studies on how the issues are being resolved. Concluding the volume with an agenda for future research, *Studying Diversity in Teacher Education* is a necessary resource for all educators. The question of why we need to think about how we research race demands a conceptualization of race that captures both its social construction and its temporal evolution. We need both an understanding of race and clarity about how we talk about it in our design and conduct of research, and in how we interpret and apply it in our findings. As a field, we can use research on race and racism in education to help construct social change. Our purpose with this volume is to underscore the persistence of the discriminatory actions—processes—and the normalization of the use of race (and class)—conditions—to justify the existing and growing disparity between the quality of life and opportunity for middle-class and more affluent Whites and that for people of color and people of color who live in poverty. As editors of this volume, we wonder what more we could learn and understand about the process and condition of race if we dare to ask bold questions about race and racism and commit to methods and analyses that respect the experiences and knowledges of our research participants and partners. In general terms, sustainability is the act of meeting our own

needs today without compromising the ability of future generations to meet their own needs (World Commission on Environment and Development, 1987). Obviously, the ability of natural resources and environmental systems to support our needs is limited. Therefore, the major challenge for engineers today is to design and/or operate systems that use energy and natural resources sustainably. Designing for the environment is crucial. This book presents the recent engineering approaches to sustainability from research and practice. The chapters included in this volume are from the first International Sustainability Congress organized by International Center of Sustainability (ICS) between 1-3 December 2016 in Istanbul, Turkey. All chapters are peer-reviewed by both the editors and at least two independent scholars from fields relevant to the manuscript's subject area. ICS is a research and academic center for sustainability founded in 2015 and dedicated to build resilience of communities and ecosystems to environmental and socio-economic risks. ICS has an integrated approach and defines sustainability not only in terms of environment but also in terms of socio-economic process. Its mission is to produce information, to research and to practice at Micro and Macro levels in Sustainable Development with a holistic and cross-disciplinary approach.
