that in the twentieth century virtually all Americans came to think of themselves as “middle class”? In this cultural history of real estate brokerage, Jeffrey M. Hornstein argues that the rise of the Realtors as dealers in both domestic space and the ideology of home ownership provides tremendous insight into this critical question. At the dawn of the twentieth century, a group of prominent real estate brokers attempted to transform their occupation into a profession. Drawing on traditional notions of the learned professions, they developed a new identity—the professional entrepreneur—and a brand name, “Realtor.” The Realtors worked doggedly to make home ownership a central element of what became known as the “American dream.” Hornstein analyzes the internal evolution of the occupation, particularly the gender dynamics culminating in the rise of women brokers to predominance after the Second World War. At the same time, he examines the ways organized real estate brokers influenced American housing policy throughout the century. Hornstein draws on trade journals, government documents on housing policy, material from the archives of the National Association of Realtors and local real estate boards, demographic data, and fictional accounts of real estate agents. He chronicles the early efforts of real estate brokers to establish their profession by creating local and national boards, business

Part I offers cutting-edge analysis on how to measure, model, and understand the impact of zoning and other modes of real estate regulation, from economic and normative theoretical viewpoints. Part II complements Part I by providing historical observations and empirical knowledge on the actual contribution of zoning and historical conservation regulation to cities' shape. Part III considers the outcomes of business and industrial land development policies. Part IV studies urban land development regulation and allows to compare between two relevant case studies—one from Germany, and the other from Poland.
