Slovene, a Slavic tongue, is spoken by over one million people in Slovenia, as well as parts of Italy and Hungary. With multiple definitions for many of the entries in the volume, this is the most comprehensive Slovene dictionary available in the U.S. Also included are appendices on numerical expressions, weights and measures, and calendar expressions. The perfect companion for students or travelers. Cases decided in the United States district courts, United States Court of International Trade, and rulings of the Judicial Panel on Multidistrict Litigation. This

book is one out of 8 IAEG XII Congress volumes and deals with education and the professional ethics, which scientists, regulators and practitioners of engineering geology inevitably have to face through the purposes, methods, limitations and findings of their works. This volume presents contributions on the professional responsibilities of engineering geologists; the interaction of engineering geologists with other professionals; recognition of the engineering geological profession and its particular contribution to society, culture,

and economy and implications for the education of engineering geologists at tertiary level and in further education schemes. Issues treated in this volume are: the position of engineering geology within the geo-engineering profession; professional ethics and communication; resource use and re-use; managing risk in a litigious world; engineering and geological responsibility and engineering geology at tertiary level. The Engineering Geology for Society and Territory volumes of the IAEG XII Congress held in Torino from September 15-19,

2014, analyze the dynamic role of engineering geology in our changing world and build on the four main themes of the congress:

Environment, processes, issues and approaches.

The congress topics and subject areas of the 8 IAEG XII Congress volumes are: Climate Change and Engineering Geology. Landslide Processes. River Basins, Reservoir Sedimentation and Water Resources. Marine and Coastal Processes. Urban Geology, Sustainable Planning and Landscape Exploitation. Applied Geology for Major Engineering Projects. Education, Professional Ethics

and Public Recognition of Engineering Geology. Preservation of Cultural Heritage.

This volume contains peer-reviewed papers from the Fourth World Landslide Forum organized by the International Consortium on Landslides (ICL), the Global Promotion Committee of the International Programme on Landslides (IPL), University of Ljubljana (UL) and Geological Survey of Slovenia in Ljubljana, Slovenia from May 29 to June 2, 2017. The complete collection of papers from the Forum is published in five full-color volumes. This fourth volume

contains the following:

- Earthquake-Induced Landslides
- Rainfall-Induced Landslides
- Rapid Landslides: Debris Flows, Mudflows, Rapid Debris Slides
- Landslides in Rocks and Complex Landslides: Rock Topples, Rock Falls, Rock Slides, Complex Landslides
- Landslides and Other Natural Hazards: Floods, Droughts, Wildfires, Tsunamis, Volcanoes

Prof. Matjaž Mikoš is the Forum Chair of the Fourth World Landslide Forum. He is the Vice President of International Consortium on Landslides and President of the Slovenian National Platform

for Disaster Risk Reduction. Prof. Nicola Casagli is Founding member of the International Consortium on Landslides(ICL), professor at the University of Florence and founder of the UNESCO Chair on geohydrological hazards at the same University. Prof. Yueping Yin is the President of the International Consortium on Landslides and the Chairman of the Committee of Geo-Hazards Prevention of China, and the Chief Geologist of Geo-Hazard Emergency Technology, Ministry of Land and Resources, P.R. China". Prof. Kyoji Sassa is the Founding President of the International

Consortium on Landslides(ICL). He is Executive Director of ICL and the Editor-in-Chief of International Journal "Landslides" since its foundation in 2004. IPL (International Programme on Landslides) is a programme of the ICL. The programme is managed by the IPL Global Promotion Committee including ICL and ICL supporting organizations, UNESCO, WMO, FAO, UNISDR, UNU, ICSU, WFEO, IUGS and IUGG. The IPL contributes to the United Nations International Strategy for Disaster Reduction and the ISDR-ICL Sendai Partnerships 2015-2025. This

book presents landslide studies using the geographic information system (GIS), which includes not only the science of GIS and remote sensing, but also technical innovations, such as detailed light detection and ranging profiles, among others. To date most of the research on landslides has been found in journals on topography, geology, geo-technology, landslides, and GIS, and is limited to specific scientific aspects. Although journal articles on GIS using landslide studies are abundant, there are very few books on this topic. This book is designed to fill

that gap and show how the latest GIS technology can contribute in terms of landslide studies. In a related development, the GIS Landslide Workshop was established in Japan 7 years ago in order to communicate and solve the scientific as well as technical problems of GIS analyses, such as how to use GIS software and its functions. The workshop has significantly contributed to progress in the field. Included among the chapters of this book are GIS using susceptibility mapping, analyses of deep-seated and shallow landslides, measuring and visualization of landslide distribution in

relation to topography, geological facies and structures, rivers, land use, and infrastructures such as roads and streets. Filled with photographs, figures, and tables, this book is of great value to researchers in the fields of geography, geology, seismology, environment, remote sensing, and atmospheric research, as well as to students in these fields. Hardcover This volume contains peer-reviewed papers from the Third World Landslide Forum organized by the International Consortium on Landslides (ICL) in June 2014. The complete collection of papers from the

Forum is published in three full-color volumes and one mono-color volume. This book is the first to give a comprehensive and detailed overview of the complete geography of Slovenia in English. Only very few countries, even considerably larger ones, can boast the landscape diversity found in Slovenia since the Alps, the Pannonian Basin, the Dinaric Alps, and the Mediterranean meet and interweave in this small corner of Central Europe, as do Germanic, Hungarian, Slavic, and Romance cultural influences. The book provides a systematical overview of physical and human

geographical elements of Slovenia from landforms to cultural characteristics. Special attention is given to landscape diversity, to the presentation of Slovene landscape types and regions, to some particularities and interesting facts of Slovenia, and to the position of Slovenia in the World. The book also illustrates some other important geographical phenomena, processes and interactions between nature and society in nowadays Slovenia. This volume appeals to researchers as well as students in the field of regional geography. It can also serve as a

source for complete background information as well as a field guide for Slovenia. This is a book about how cities occupy space. We are not interested in architectural masterpieces, but the tools for reinventing city life. We try to provide a framework for the architecture and design of public space without aesthetic considerations. We identify several defining factors. First of all, history as the city today very much depends on how it was yesterday. The geographical location and the technology available at a point of time both play a constraining role in what can be done

as well. Culture, in the form of social norms, laws and regulations, also restricts what is possible to do. On the other hand, culture is also important in guiding the ideas and aspirations that together inform what society wants the city to be. The city needs government intervention, or regulation, to ameliorate the problem posed by a tangle of externalities and public goods. We focus on two comparative case studies: the evolution of urban form in the US and how it stands in a sharp contrast with the evolution of urban form in Japan. We emphasise the

difference in regulations between both jurisdictions. We study how differences in technological choices driven by culture (i.e. racial segregation), geography (i.e. the availability of land) and history (i.e. the mobility restrictions of the Tokugawa period) result in vast differences in mobility regarding the share of public transport, walking and cycling versus motorised private transport. American cities are constrained by rules that are much further from the neoliberal economic idea of free and competitive markets than the Japanese ones. Japanese planning promotes

competition and through a granular, walkable city dotted with small shops, fosters variety in the availability of goods and services. We hypothesise how changing regulations could change the urban form to generate a greater variety of goods and to foster the access to those goods through a more equitable distribution of wealth. Critically, we point out that a desirably denser city must rely on public transport, and we also study how a less-dense city can be made to work with public transport. We conclude by claiming that changes in regulations are very unlikely to happen in the US, as it

would require deep cultural changes to move from local to a more universal and less excluding public good provision, but they are both possible and desirable in other jurisdictions. This interactive book presents comprehensive information on the fundamentals of landslide types and dynamics, while also providing a set of PPT, PDF, and text tools for education and capacity development.
