Cardiac arrest can strike a seemingly healthy individual of any age, race, ethnicity, or gender at any time in any location, often without warning. Cardiac arrest is the third leading cause of death in the United States, following cancer and heart disease. Four out of five cardiac arrests occur in the home, and more than 90 percent of individuals with cardiac arrest die before reaching the hospital. First and foremost, cardiac arrest treatment is a community issue - local resources and personnel must provide appropriate, high-quality care to save the life of a community member. Time between onset of arrest and provision of care is fundamental, and shortening this time is one of the best ways to reduce the risk of death and disability from cardiac arrest. Specific actions can be implemented now to decrease this time, and recent advances in science could lead to new discoveries in the causes of, and treatments for, cardiac arrest. However, specific barriers must first be addressed. Strategies to Improve Cardiac Arrest Survival examines the complete system of response to cardiac arrest in the United States and identifies opportunities within existing and new treatments, strategies, and research that promise to improve the survival and recovery of patients. The recommendations of Strategies to Improve Cardiac Arrest Survival provide high-priority actions to advance the field as a whole. This report will help citizens, government agencies, and private industry to improve health outcomes from sudden cardiac arrest across the United States. This workbook gives nurses and nursing students the opportunity to practice and perfect their rhythm interpretation skills on more than 600 realistic ECG strips. This book describes a novel therapy for obesity that associates the traditional procedures of weight-loss lifestyle modification with specific, individualized cognitive behavioral procedures to address some obstacles that have been indicated by recent research to influence weight loss and maintenance. The Cognitive Behavioral Therapy for Obesity (CBT-OB) can be used to treat all classes of obesity, including patients with severe comorbidities and disability associated with obesity, who are not usually included in traditional weight-loss lifestyle modification treatments. The book describes the treatment program in detail, and with numerous clinical vignettes. It also discusses involving significant others in the change process and adapting the CBT-OB for patients with severe obesity, binge-eating disorder, medical and psychiatric comorbidity, and treated with weight-loss drugs or bariatric surgery. Lastly, a chapter is dedicated to the use of digital technology with CBT-OB in order to help patients monitor their food intake and physical activity and to addressing obstacles in real time. Thanks to the description of how to apply the latest, evidence-based CBT-OB to real world settings, this volume is a valuable useful tool for all specialists - endocrinologists, nutritionists, dietitians, psychologists, psychiatrists - who deal with obesity and eating disorders. This clinically oriented book provides a complete overview of Proliferative vitreoretinopathy (PVR) Retinal Detachment, a difficult surgical challenge faced by ophthalmologists. Small gauge vitrectomy offers new possibilities to tackle this difficult pathology however this surgical approach may differ from one retinal surgeon to the next. To reflect the various approaches to treating PVR, the book is divided up in three parts. In the first part the

authors describe the complete variety of surgical techniques applied to PVR detachment. In the second section, well-known international surgeons from Europe to Asia describe their personal surgical approach for PVR detachment and demonstrate their surgery in videos. In the third part, a large variety of retinal surgeons show case reports of PVR retinal detachment to give a complete overview of dealing with this complex retinal disorder. During an annual quality assurance review of EMS records, he discovers several reports that have an unusual connection between them. 5500 to be exact that were healthy geriatric patients who died of natural causes, during transport by the ambulance service and were connected to a single individual. The bigger picture appeared to be one of the largest serial killings ever recorded. He needed more evidence to secure his claim. Near the end of his investigation he discovers only circumstantial evidence that points to not one individual, but a ring of individuals involved in this crime. Early one morning he prepares for a state inspection of the ambulance service. While he waits for the state inspectors to arrive he returns to his investigation, discovering the final key to his puzzle. Some, who have experienced the near death process, report that in their minds their life flashes before their eyes. Images he reviews are from past lessons learned, "Rules of Engagement" while running on adrenaline and attending the EMS School of Hard Knocks.
