Hillary Clinton is running for the presidency with a message of hope and change. But, as Doug Henwood makes clear in this concise, devastating indictment, little trust can be placed in her campaign promises. Rigorously reviewing her record, Henwood shows how Clinton's positions on key issues have always blown with the breeze of expediency, though generally around an axis of moralism and hawkishness. Without a meaningful program other than a broad fealty to the status quo, Henwood suggests, "the case for Hillary boils down to this: she has experience, she's a woman, and it's her turn." The book introduces corporate finance to first year students in business schools. Basic subjects such as marketing, human resources and finance are all fundamental to the learning of a business manager. A book on these subjects must emphasise learning that is conceptual in nature and at the same time, application oriented. This book attempts to achieve this in a manner that is comprehensive and shorn of complexity. It examines the practice of finance without diluting theory and conceptual knowledge. Corporate finance is necessarily quantitative in nature and the book duly places emphasis on that aspect. It ensures the primacy of ideas and concepts utilising numbers as supportive elements. All scheduling software is difficult to learn for a number of reasons. Investing in a book written by Paul E Harris will address all these issues and allow you to setup the software properly and understand all the obscure functions letting you become productive more quickly and enhance your career opportunities and salary with a solid understanding of the software. Money and politics in an election that broke the mold Beginning with the 1960 election, readers could turn to one book for an authoritative and comprehensive examination of campaign finance at the federal level. Now, the latest in this respected series, Financing the 2016 Election, explores the role of money in one of the most unconventional elections in modern American history. A team of leading scholars has dug into the roles played by political parties and special interest groups (including their "Super PACS") in the presidential and congressional elections of 2016. David Magleby and his team of experts examined Federal Elections Commission reports and interviewed dozens of key participants, including representatives of virtually all the major interest groups active in the 2016 election cycle. They place that election in the context of how U.S. elections have been financed during recent decades—a context that illustrates how dramatically different campaign finance is today from the past. Among the most important changes has been the growth of so-called Super PACS, which have become increasingly important both in the financing they provide candidates and in their ability to act independently, both for and against candidates. Overall, Super PACS doubled their spending in 2016 from four years earlier. Taking a comprehensive approach, this book helps readers understand how the financing of elections—including the increasing reliance by candidates on outside special interest groups—ultimately affects politics and public policy. This volume provides the essential vocabulary currently employed in discourses on the future in 50 contributions by renowned scholars in their respective fields, which examine future imaginaries across cultures and time. Not situated in the field of "futurology" proper, it comes at future studies 'sideways' and offers a multidisciplinary treatment of a critical futures' vocabulary. The contributors have their disciplinary homes in a wide range of subjects – history, cultural studies, literary studies, sociology, media studies, American studies, Japanese studies, Chinese studies, and philosophy – and critically illuminate numerous discourses about the future (or futures), past and present. In compiling such a critical vocabulary, this book seeks to foster conversations about futures in study programs and research forums and offers a toolbox for discussing them with an adequate degree of complexity. The Working Group II contribution to the Sixth Assessment Report of the Intergovernmental Panel on Climate Change (IPCC) provides a comprehensive assessment of the scientific literature relevant to climate change impacts, adaptation and vulnerability. The report recognizes the interactions of climate, ecosystems and biodiversity, and human societies, and integrates across the natural, ecological, social and economic sciences. It emphasizes how efforts in adaptation and in reducing greenhouse gas emissions can come together in a process called climate resilient development, which enables a liveable future for biodiversity and humankind. The IPCC is the leading body for assessing climate change science. IPCC reports are produced in comprehensive, objective and transparent ways, ensuring they reflect the full range of views in the scientific literature. Novel elements include focused topical assessments, and an atlas presenting observed climate change impacts and future risks from global to regional scales. The complex and ever-changing rules governing American presidential nomination contests are continuously up for criticism, but there is little to no consensus on exactly what the problems are, or on how to fix them. The evolving system is hardly rational because it was never carefully planned. So how are we to make sense of the myriad complexities in the primary process, how it affects the general election, and calls for change? In this thoroughly updated second edition of *The Imperfect Primary*, political scientist Barbara Norrander explores how presidential candidates are nominated, how that process bridges to the general election campaign, discusses past and current proposals for reform, and examines the possibility for more practical, incremental changes to the electoral rules. Norrander reminds us to be careful what we wish for—reforming the presidential nomination process is as complex as the current system. Through the modelling of empirical research to demonstrate how questions of biases can be systematically addressed, students can better see the advantages, disadvantages, and potential for unintended consequences in a whole host of reform proposals. The second edition includes an entirely new chapter on the connections between the primary and general election phases of presidential selection. The entire book has been revised to reflect the 2012 presidential primaries and election.

Archival snapshot of entire looseleaf Code of Massachusetts Regulations held by the Social Law Library of Massachusetts as of January 2020. Since 1952, the primary election in a small, not very diverse New England state has had a disproportionate impact on the U.S. presidential nomination process and the ensuing general election. Although just a handful of delegates are at stake, the New Hampshire primary has become a massive media event and a reasonably reliable predictor of a campaign's ultimate success or failure. In *The First Primary*, Moore and Smith offer a comprehensive history of the state's primary, an analysis of its media coverage and impact, and a description of the New Hampshire electorate, along with a discussion of how that electorate reflects or diverges from national opinions on candidates and issues. A book for political scientists and political junkies, media and policy professionals, and all students of American government, *The First Primary* ably fills the gaps in our understanding of New Hampshire's outsize role in the nomination process. This book provides an overview of how boreal and temperate tree species have adapted their annual development cycle to the seasonally varying climatic conditions. Therefore, the frost hardy dormant phase, and the susceptible growth phase, are synchronized with the seasonality of the climate. The volume discusses the annual cycle, including various attributes such as timing of bud burst and other phenological events, seasonality of photosynthetic capacity or the frost hardiness of the trees. During the last few decades dynamic ecophysiological models have been used increasingly in studies of the annual cycle, particularly when projecting the ecological effects of climate change. The main emphasis of this volume is on combining modelling with experimental studies, and on the importance of the biological realism of the models.

A fresh approach to managing organizational change by looking at it as complex, dynamic and messy as opposed to a series of neat, linear stages and processes leading to success. Key to the approach is the idea that change, creativity and innovation all overlap and interconnect rather than being three separate areas of study and that managing the three together is central to organizations having the competitive edge in developing new technologies and techniques, products and services. The book continues to offer practical guidelines as well as a theoretical understanding of change, creativity and innovation. It delivers an equal balance of critical perspectives and sound ideas for organizational change and development and presents the idea that change can be proactive, driven by creativity and innovation. The new edition includes additional change management content including learning, personal change, managing the self, employability, developments in conventional Organizational Development and new emergent forms including appreciative inquiry. Non-state actors' role extends beyond provision of schooling to interventions at various education levels and influence spheres. Alongside its review of progress towards SDG 4, including emerging evidence on the COVID-19 pandemic's impact, the 2021/2 Global Education Monitoring Report urges governments to see all institutions, students and teachers as part of a single system. Standards, information, incentives and accountability should help governments protect, respect and fulfil the right to education of all, without turning their eyes away from privilege or exploitation. Publicly funded education does not have to be publicly provided but disparity in education processes, student outcomes and teacher working conditions must be addressed. Efficiency and innovation, rather than being commercial secrets, should be diffused and practised by all. To that end, transparency and integrity in the public education policy process need to be maintained to block vested interests. The report's rallying call - Who chooses? Who loses? - invites policymakers to question relationships with non-state actors in terms of fundamental choices: between equity and freedom of choice; between encouraging initiative and setting standards; between groups of varying means and needs; between immediate commitments under SDG 4 and those to be progressively realized (e.g. post-secondary education); and between education and other social sectors. "I use the Classic, spiral bound 8.5 x 11 version. I like it for having a fuller calendar at my disposal and to know all the UM events, special Sundays, and other important seasonal and liturgical information. The UM Calendar is much more useful than a generic calendar for all the information, resources and UM specific events that are listed. My favorite feature is the full calendar for the following year, so that for planning purposes I know when Lent begins, Easter is, and what day Christmas falls. I get extra copies and distribute them to my planning team, worship team and other staff." - The Rev. Dr. Bruce A. Jones, senior pastor, La Plata UMC in La Plata, (Md.)
