Marksmanship proficiency is the cornerstone of a Marine's effectiveness in any combat situation. The goal of marksmanship training is to develop this proficiency to a combat-effective level. Marine Corps policy requires that all Marines be thoroughly trained and capable of safely and effectively employing those weapons appropriate to their grade and duty assignment. To this end, the Marine Corps Combat Pistol Program (CPP) functions to provide marksmanship training to those Marines who are required by T/O, grade, or duty assignment to carry the M9 service pistol. Through classroom, dry practice, and live fire training, the CPP prepares Marines to be combat-effective with the pistol in support of their unit's mission. 2. OVERVIEW. This lesson will introduce Marine Corps pistol marksmanship training with the M9 service pistol. 3. INTRODUCE LEARNING OBJECTIVES. This lesson is provided as an introduction to the Marine Corps CPP. There are no Terminal or Enabling Learning Objectives for this lesson. 4. METHOD. This lesson will be taught in a classroom setting using lecture. 5. EVALUATION. The Marine will not be tested on the material in this lesson. TRANSITION: The intent of the CPP is to provide classroom, dry practice, and live fire training on basic and combat pistol marksmanship skills. Systematically, the emphasis of the training program shifts from fundamental to combat applications with skills gradually refined until Marines are at a combat ready level. A revolution in amateur astronomy has occurred in the past decade with the wide availability of high tech, computer-driven, Go-To telescopes. Vixen Optics is leading the way by offering the Star Book Ten system, with its unique star map graphics software. The Star Book Ten is the latest version of computer telescope control using star map graphics as a user interface, first introduced in the original Star Book first offered in 2003. The increasingly complicated nature of this software means that learning to optimize this program is not straightforward, and yet the resulting views when all features are correctly deployed can be phenomenal. After a short history of computerized Go-To telescopes for the consumer amateur astronomer market, Chen offers a treasury of technical information. His advice, tips, and solutions aid the user in getting the most out of the Star Book Ten system in observing sessions. This text is an introduction to the full range of standard reference tools in all branches of English studies. More than 10,000 titles are included. The Reference Guide covers all the areas traditionally defined as English studies and all the field of inquiry more recently associated with English studies.
