A former stripper turned suburban housewife is exposed as a brutal killer in this shocking true crime tale of a loving husband beheaded in Phoenix. Phoenix, Arizona, 2004. Marjorie Orbin filed a missing person's report on her husband, Jay. She claimed that the successful art dealer had left town on business after celebrating their son's birthday more than a month before. But no one believed that Jay would abandon the family he loved. Authorities suspected foul play . . . As the search for Jay made local headlines, Marjorie's story starting coming apart. Why did she wait so long before going to police? If Jay was away on business, why were there charges made to his credit card in Phoenix? Then, the unthinkable happened. Jay's headless, limbless torso was discovered on the outskirts of the Phoenix desert—and all evidence pointed to Marjorie as the killer. The

investigation revealed surprising details about her life—six previous marriages, an ongoing affair with a man from her gym, and alleged ties to the New York mafia.

Vauxhall has been making cars in Britain for longer than anyone else. The name entered the UK industrial lexicon in 1897, when the Vauxhall Iron Works Company was formed to run the bankrupt engineering business founded by Alexander Wilson in 1859. The first Vauxhall car left the Thames side works in 1903. The company moved to Luton in 1905, and the solely car-making company Vauxhall Motors Limited was formed in 1907. Famed as a maker of sporting and luxury cars, Vauxhall was bought by the American giant General Motors in 1925. GM took the company into a new era of mass production and turned it into one of the top five car companies in the UK. After the Second World War, Vauxhall became the household name it is today, with models such as Viva, Astra, Cresta, Victor, Nova, and Cavalier. The journey from the Thames to today's plants at Ellesmere Port and Luton is full of twists, turns, dramas, and triumphs. Ian Coomber worked at Vauxhall for thirty-eight years, progressing from apprentice to the boardroom. He has told the Vauxhall story with the benefit of years of experience and a lifelong passion for the marque.

"This pioneering study of United States direct investment in Japan will interest academic specialists, business managers, and government policymakers in America, Japan, and elsewhere. Drawing on rich historical materials from both sides of the Pacific, including corporate records and government documents never before made public, Mason examines the development of both Japanese policy towards foreign investment and the strategic responses of American corporations. This history is related in part through original case studies of Coca-Cola, Dow Chemical, Ford, General Motors, International Business Machines, Motorola, Otis Elevator, Texas Instruments, Western Electric, and Victor Talking Machine. The book seeks to explain why s little foreign direct investment has entered modern Japan. In contrast to the widely held view that emphasizes an alleged lack of effort on the part of foreign corporations, this study finds that Japanese restrictions merit greater attention. Many analysts of the modern Japanese political economy identify the Japanese government as the key actor in initiating such restrictions. Mason finds that the influence of Japanese business has often proved more potent than these analysts suggest. This book offers fresh insights into both the operation of the modern Japanese political economy and of its relations with the world economy."

Pulitzer Prize-winning journalist Walter Pincus exposes the darkest secret in American nuclear history—sixty-seven nuclear tests in the Marshall Islands that decimated a people and their land. The most important place in American nuclear history are the Marshall Islands—an idyllic Pacific paradise that served as the staging ground for over sixty US nuclear tests. It was here, from 1946 to 1958, that America perfected the weapon that preserved the peace of the post-war years. It was here—with the 1954 Castle Bravo test over Bikini Atoll—that America executed its largest nuclear detonation, a thousand times more powerful than Hiroshima. And it was here that a native people became unwilling test subjects in the first large scale study of nuclear radiation fallout when the ashes rained down on powerless villagers,

contaminating the land they loved and forever changing a way of life. In *Blown to Hell*, Pulitzer Prize-winning journalist Walter Pincus tells for the first time the tragic story of the Marshallese people caught in the crosshairs of American nuclear testing. From John Anjain, a local magistrate of Rongelap Atoll who loses more than most; to the radiation-exposed crew of the Japanese fishing boat the Lucky Dragon; to Dr. Robert Conard, a Navy physician who realized the dangers facing the islanders and attempted to help them; to the Washington power brokers trying to keep the unthinkable fallout from public view . . . *Blown to Hell* tells the human story of America's nuclear testing program. Displaced from the only homes they had known, the native tribes that inhabited the serene Pacific atolls for millennia before they became ground zero for America's first thermonuclear detonations returned to homes despoiled by radiation—if they were lucky enough to return at all. Others were ripped from their ancestral lands and shuttled to new islands with little regard for how the new environment supported their way of life and little acknowledgement of all they left behind. But not even the disruptive relocations allowed the islanders to escape the fallout.

A memoir by the mustachioed baseball pitcher who went playing rocky, trash-ridden fields in Castro's Cuba to becoming a Boston Red Sox legend. Luis Tiant is one of the most charismatic and accomplished players in Boston Red Sox and Major League Baseball history. With a barrel-chested physique and a Fu Manchu mustache, Tiant may not have looked like the lean, sculpted aces he usually played against, but nobody was a tougher competitor on the diamond, and few were as successful. There may be no more qualified twentieth-century pitcher not yet enshrined in the National Baseball Hall of Fame. His big-league dreams came at a price: racism in the Deep South and the Boston suburbs, and nearly fifteen years separated from a family held captive in Castro's Cuba. But baseball also delivered World Series stardom and a heroic return to his island home after close to a half-century of forced exile. The man whose name—"El Tiante"—became a Fenway Park battle cry has never fully shared his tale in his own words, until now. In *Son of Havana*, Tiant puts his heart on his sleeve and describes his road from torn-up fields in Havana to the pristine lawns of major league ballparks. Readers will share Tiant's pride when appeals by a pair of US senators to baseball-fanatic Castro secure freedom for Luis's parents to fly to Boston and witness the 1975 World Series glory of their child. And readers will join the big-league ballplayers for their spring 2016 exhibition game in Havana, when Tiant—a living link to the earliest, scariest days of the Castro regime—threw out the first

pitch.

The engineering enterprise is a pillar of U.S. national and homeland security, economic vitality, and innovation. But many engineering tasks can now be performed anywhere in the world. The emergence of "offshoring"- the transfer of work from the United States to affiliated and unaffiliated entities abroad - has raised concerns about the impacts of globalization. The Offshoring of Engineering helps to answer many questions about the scope, composition, and motivation for offshoring and considers the implications for the future of U.S. engineering practice, labor

markets, education, and research. This book examines trends and impacts from a broad perspective and in six specific industries - software, semiconductors, personal computer manufacturing, construction engineering and services, automobiles, and pharmaceuticals. The Offshoring of Engineering will be of great interest to engineers, engineering professors and deans, and policy makers, as well as people outside the engineering community who are concerned with sustaining and strengthening U.S. engineering capabilities in support of homeland security, economic vitality, and innovation.
