NSA is a comprehensive collection of international nuclear science and technology literature for the period 1948 through 1976, pre-dating the prestigious INIS database, which began in 1970. NSA existed as a printed product (Volumes 1-33) initially, created by DOE's predecessor, the U.S. Atomic Energy Commission (AEC). NSA includes citations to scientific and technical reports from the AEC, the U.S. Energy Research and Development Administration and its contractors, plus other agencies and international organizations, universities, and industrial and research organizations. References to books, conference proceedings, papers, patents, dissertations, engineering drawings, and journal articles from worldwide sources are also included. Abstracts and full text are provided if available.

Tourism is widely considered to be an important factor in socio-economic development, particularly in less developed countries. However, despite almost universal recognition of tourism's development potential, the extent to which economic and social progress is linked to the growth of a country's tourism sector remains the subject of intense debate. *Tourism and Development in the Developing World* offers a thorough overview of the tourism-development relationship. Focusing specifically on the less developed world and drawing on contemporary case studies, this updated second edition questions widely-held assumptions on the role of tourism in development and seeks to highlight the challenges faced by destinations seeking to achieve development through tourism. The introductory chapter establishes the foundation for the book, exploring the meaning and objectives of development, reviewing theoretical perspectives on the developmental process, and assessing the reasons why less developed countries are

attracted to tourism as a development option. The concept of sustainable development, as the most widely adopted contemporary model of development, is then introduced and its links with tourism critically assessed. Subsequent chapters explore the key issues associated with tourism and development, including the rise of globalization; the tourism planning and development process; the relationship between tourism and communities within which it is developed; the management implications of trends in the demand for and uptake of tourism; and an analysis of the consequences of tourism development for destination environments, economies and societies. A new chapter considers the challenges of climate change, sustainability of resource supply (oil, water and food), global economic instability, political instability and changing demographics. Finally, the issues raised throughout the book are drawn together in a concluding chapter that assesses the tourism and development 'dilemma'. Combining an overview of essential concepts, theories and knowledge with an analysis of contemporary issues and debates in tourism and development, this

new edition will be an invaluable resource for those investigating tourism issues in developing countries. The book will be of interest to students of tourism, development, geography and area studies, international relations and politics, and sociology.

This book provides the reader with an understanding of the impact that different morphologies, construction materials and green coverage solutions have on the urban microclimate, thus affecting the comfort conditions of urban inhabitants and the energy needs of buildings in urban areas. The book covers the latest approaches to energy and outdoor comfort measurement and modelling on an urban scale, and describes possible measures and strategies to mitigate the effects of the mutual interaction between urban settlements and local microclimate. Despite its relevance, only limited literature is currently devoted to appraising—from an engineering

perspective—the intertwining relationships between urban geometry and fabrics, energy fluxes between buildings and their surroundings, outdoor microclimate conditions and building energy demands in urban areas. This book fills this gap by first discussing the physical processes that govern heat and mass transfer at an urban scale, while emphasizing the role played by different spatial arrangements, manmade materials and green infrastructures on the outdoor microclimate. The first chapters also address the implications of these factors on the outdoor comfort conditions experienced by pedestrians, and on the buildings' energy demand for space heating and cooling. Then, based upon cutting-edge experimental activities and simulation work, this book demonstrates current and forthcoming adaptation and mitigation strategies to improve the urban microclimate and its impact on the built environment, such as cool materials, thermochromic and retroreflective finishing materials, and green infrastructures applied either at a building scale or at the urban scale. The effect of these solutions is demonstrated for

different cities worldwide under a range of climate conditions. Finally, the book opens a wider perspective by introducing the basic elements that allow fuel poverty, raw materials consumption, and the principles of circular economy in the definition of a resilient urban settlement.

Before the interstates, Main Street America was the small town's commercial spine and served as the linchpin for community social solidarity. Yet, during the past three decades, a series of economic downturns has left many of the great small cities barely viable. *American Hometown Renewal* is the first book to combine administrative, budgetary, and economic analysis to examine the economic and fiscal plight currently facing America's small towns. Featuring a blend of theory, applications, and case studies, it provides a comprehensive, single-source textbook covering the key issues facing small town officials in today's uncertain economy. Written by a former public

manager, university professor, and consultant to numerous small towns in the Heartland, this book demonstrates the ways in which contemporary small towns throughout the nation are facing economic challenges brought about by the financial shocks that began in 2008. Each chapter explores a theme related to small town revival and provides a related tool or technique to enable small town officials to meet the challenges of the 21st Century. Encouraging local small town officials to look at the economic orbit of communities in a similar manner as a town's budget or a family's personal wealth, examining its specific competitive advantages in terms of relative assets to those of competing communities, this book provides the reader with step-by-step instructions on how to conduct an asset inventory and apply key asset tools to devise a strategy for overcoming the challenges and constraints imposed upon spatially-fixed communities. *American Hometown Renewal* is an essential primer for students studying city management, economic community development, and city planning, and will be a trusted handbook for city managers, geographers,

city planners, urban or rural sociologists, political scientists, and regional microeconomists.

My Sociology reconceptualizes intro sociology for the changing demographics in today's higher education environment. Concise and student-focused, *My Sociology* captures students' attention with engaging stories and a focus on non-dominant populations. Rather than introducing students to theory and history at the beginning of the text, the book integrates the necessary information throughout to keep students engaged.
