The battle to save the kingdoms devastated by the Plague culminates in this exhilarating finale to the Whispers from Mirrowen trilogy. If there is anything more dangerous than the Plague itself, it is the journey that awaits those sworn to stop it. Tyrus, the renegade magic-wielder exiled from Kenatos, knows this firsthand. His original mission through the Scourgelands met a tragic end, leaving him as the sole survivor. Now all hope lies with his daughter, Phae, the uniquely gifted Dryad-born who can not only steal memories but also summon the power of the

fireblood--and who alone has the power to breach the lost gate of Mirrowen. But first Phae and the comrades who have come to her aid must survive the most dangerous place on earth: the Scourgelands. The menacing woods prove every bit as treacherous as reputed. Murder, sacrifice, deception, and an epic battle with a beast ensue. Will Phae reach the land beyond the grasp of the deadly Plague...or will the quest through the Scourgelands end in tragedy once again?

The Jalna Saga CRC Press

This official NASA history document provides enlightening tales about the Apollo lunar landing program by those who were there: astronauts (Duke and Schmitt), managers and scientists (von Braun, Webb, Paine, Gilruth, Mueller, Low, Faget, Rogers, Guin), and a protocol assistant who accompanied the Apollo 11 on their whirlwind presidential goodwill mission (Barnes). From the foreword by Christopher Kraft: For a project as massive as the Apollo program, history may distance itself to the extent where modern interpretation distills a feeling that such events took place without extensive human involvement. Nothing could be further removed from the truth. Through the verbal accounts offered by the oral histories such as presented in this volume, we are reintroduced to the critical human factor which is the essence of any history. People made Apollo happen and it is important to preserve their thoughts, feelings, and recollections for future generations. The oral histories presented in this volume offer a sample of what NASA has done to preserve the story of Apollo as part of our nation's human spaceflight heritage. The accounts included in this book are a small sampling of the large number of

oral histories that have been conducted under the auspices of the NASA history program, since near the beginning of the Agency. They also represent the many personal contributions made during Project Apollo, the single largest peacetime endeavor in American history. These recollections span the origins, management, and completion of that enormous effort and measurably enhance our appreciation of its difficulty. I am pleased that the comments of some of the key individuals involved in Project Apollo are being preserved by NASA and made available through this book. The people who are quoted in this book were among the top leaders of NASA. All of them played a prominent part in the conduct and accomplishments of Apollo. As one of those who knew and watched these individuals lead, I have a particular sense of their statements. I always had the feeling of having been granted a special privilege to participate and work on the Mercury, Gemini, and Apollo programs. The contents of this book reveal that these people had similar experiences. They all recognized that it took literally thousands of dedicated people to bring these efforts to fruition and that it was up to them to provide the necessary leadership to allow all of the workers on the project to accomplish their tasks. It was a wondrous thing to watch. Anyone interested in the underlying strength of NASA in this time period will find these accounts a fascinating read.

Crying has fascinated mankind for millenia. Since ancient times, we have known that emotional tears are a unique human characteristic. Unsurprisingly, over hundreds of years, scholars from different backgrounds have speculated about the origin and functions of human tears. According to Charles Darwin, tears fulfilled no adaptive function. And yet, this seems in sharp contrast to statements in the popular media about the significance of crying. Crying is thought to bring relief and is considered healthy - and withholding tears unhealthy. In addition, tears have been said to inhibit aggression in assaulters and to promote social bonding. Perhaps that could explain why tears have been so important in our evolution. Ad Vingerhoets is one of the few scientists in the world to have studied crying. He examines in *Why only humans weep* which claims about crying are scientifically tenable - which are fact and which are fiction? Though a psychologist, he doesn't just restrict himself to the current psychological literature, but also explores work in evolutionary biology, neurosciences, theology, art, history, and anthropology to provide an integrated perspective on this complex phenomenon. Written throughout in an academically accessible style, this book is groundbreaking in contributing to a modern scientific understanding of crying. It will have broad appeal to psychologists, psychiatrists, philosophers, biologists, and anthropologists.

Sexuality, Love, and Justice Edge by Sparklesoup

Sexuality and justice often seem odd bedfellows. Sexual embraces of intimacy and passion thrive in our private lives, while justice safeguards the laws and duties that govern the public realm. Yet intuitively, we sense there are deeper connections. Both sexuality and justice support the holistic ideal proclaimed by the early Christian writer Irenaeus: the glory of God is the human person fully alive. Evelyn and James Whitehead combine professional expertise as a psychologist and historian of religion as well as personal experiences and extensive research to explore the interplay of sexuality, love, and justice on the spiritual journey today. While drawing on biblical themes and

contemporary psychological insight, the Whiteheads examine modern experiences of attachment and vulnerability, marriage and friendship, compassion and sexual diversity, and the psychological and spiritual experiences of transgender persons—a new and often bewildering consideration for many Christians. Included is a reflection on a prophetic Christian ministry in support of sexuality and justice that illustrates the importance of moral awareness and sensual attunement to the world. Fruitful Embraces utilizes Christian theology and effective pastoral ministry to explore the vital connections between sexuality and Christian spirituality and links between compassion and justice that will encourage anyone on a spiritual journey to open their hearts and minds to the extravagant diversity of creation.

This book is based around the author's beautiful and sometimes awe-inspiring color images and mosaics of deep-sky objects. The book describes how similar "Hubble class" images can be created by amateur astronomers in their back garden using commercially available telescopes and CCD cameras. Subsequent processing and image enhancement in the "electronic darkroom" is covered in detail as well. A range of telescopes and equipment is considered, from the author's 11-inch with Hyperstar camera, down to more affordable instruments. Appendices provide links to free software - not available from a single source - and are themselves an invaluable resource.

Examining the UK Disability Discrimination Act (DDA) in comparison to its counterparts in the USA and Australia, this book focuses on how it is being interpreted and acted upon in the context of higher education, a key area of national attention in the UK. It also evaluates this law in the context of the larger project of civil rights legislation and demonstrates that geography can be used to explain law and legal arguments by highlighting their subjectivity and by emphasizing the importance of place, specificity and context. While providing in-depth analysis of the effectiveness and scope of this significant legislation this book

demonstrates the importance of geography in the application of law. It provides insights into the broader workings of UK anti-discrimination law, which are particularly relevant given the scrutiny of the Equality and Human Rights Commission and the concerns about the effectiveness of legal tools in fighting discrimination. Finally, this book critiques liberal notions of legal subjectivity and medical definitions of disability which is topical given the current attention given to debates about identity politics.

Common Core Eureka Math for Grade K, Module 4 Created by teachers, for teachers, the research-based curriculum in this series presents a comprehensive, coherent sequence of thematic units for teaching the skills outlined in the CCSS for Mathematics. With four-color illustrations, complete lesson plans, and reproducible student worksheets and assessments, this resource is uniquely designed to support teachers in developing content-rich, integrated learning experiences that adhere to established standards and encourage student engagement. Developed by Common Core, a non-profit advocacy group dedicated to producing content-rich liberal arts curricula for America's K-12 schools, Common Core Mathematics is the most comprehensive CCSS-based mathematics curriculum available today. The

modules are sequenced and paced to support the teaching of mathematics as an unfolding story that follows the logic of mathematics itself. They embody the instructional "shifts" and the standards for mathematical practice demanded by the CCSS. Each module contains a sequence of lessons that combine conceptual understanding, fluency, and application to meet the demands of each topic in the module. Formative assessments are included to support data-driven instruction. The modules are written by teams of master teachers and mathematicians. This Module addresses Number Pairs, Addition and Subtraction to 10. Common Core Learning Standards Addressed in Grade K, Module 4: K.OA.1, K.OA.2, K.OA.3, K.OA.4, K.OA.5

Apollo and America's Moon Landing Program - Before This Decade Is Out... . Personal Reflections on the Apollo Program (NASA SP-4223) by Von Braun, Kranz, Lunney, Duke, Schmitt, Low, Faget, Webb PIL Kids

Because terrorists are made, not born, it is critically important to world peace that detainees and inmates influenced by violent ideology are deradicalized and rehabilitated back into society. Exploring the challenges in this formidable endeavor, Terrorist Rehabilitation: The U.S. Experience in Iraq demonstrates through the actual experiences of military personnel, defense contractors, and Iraqi nationals that deradicalization and rehabilitation programs can succeed and have the capability to positively impact thousands of would-be terrorists globally if utilized to their full capacity. Custodial and community rehabilitation of terrorists and extremists is a new frontier in the fight against terrorism. This forward-thinking volume: Highlights the success of a rehabilitation program curriculum in Iraq Encourages individuals

and governments to embrace rehabilitation as the next most logical step in fighting terrorism Examines the recent history of threat groups in Iraq Demonstrates where the U.S. went awry in its war effort, and the steps it took to correct the situation Describes religious, vocational training, education, creative expression, and Tanweer programs introduced to the detainee population Provides insight into future steps based on lessons learned from current rehabilitation programs It is essential that we shift the focus from solely detainment and imprisonment to addressing the ideological mindset during prolonged incarceration. It is possible to effect an ideological transformation in detainees that qualifies them to be reclassified as no longer posing a security threat. This volume demonstrates that with the proper program and encouragement, a detainee's misunderstanding or extremist ideology can be replaced with the principles of moderation, toleration, and coexistence.

Cancer is diagnosed in about 140 per million children in Britain each year. There is a 1 in 500 chance that a child will be affected in the first 15 years of life, the most frequently occurring types of cancer being leukaemia and brain tumours. This book covers the descriptive epidemiology of childhood cancer in Britain, based on the unique work of the National Registry of Childhood Tumours, the largest population-based specialist childhood cancer registry in the world. The book provides a detailed account of national incidence and survival rates for childhood cancer in Britain during 1991-2000, and trends during 1966-2000. There is also an account of childhood mortality for the period 1965-2004. The diagnoses are classified throughout according to the International

Classification of Childhood Cancer, the first time the third edition of this standard classification has been used for prevalence of incidence, survival and mortality data. The chapter on incidence rates is relevant to planning of health service provision and design of research studies on aetiology, whilst the chapter on trends in incidence is relevant to the possible effects of changes in environmental and other risk factors. In addition to comprehensive tables of rates, age-incidence graphs are

provided for all the major types of childhood cancer, and possible artefacts are also discussed. The survival data demonstrates how clinical progress over the past 40 years has led to a major increase in the number of cancer survivors. The role of the Registry, covering history, methodology, current and future uses, is also discussed. This definitive work is the culmination of decades of epidemiological research and is essential reading for anyone involved in paediatric oncology or cancer epidemiology.
