This book provides an in-depth ethnographic study of science and religion in the context of South Asia, giving voice to Indian scientists and shedding valuable light on their engagement with religion. Drawing on biographical, autobiographical, historical, and ethnographic material, the volume focuses on scientists' religious life and practices, and the variety of ways in which they express them. Renny Thomas challenges the idea that science and religion in India are naturally connected and argues that the discussion has to go beyond binary models of 'conflict' and 'complementarity'. By complicating the understanding of science and religion in India, the book engages with new ways of looking at these categories.

Recorded in sacred Sanskrit texts, including the Rig Veda and the Mahabharata, Hindu Myths are thought to date back as far as the tenth century BCE. Here in these seventy-five seminal myths are the many incarnations of Vishnu, who saves mankind from destruction, and the mischievous child Krishna, alongside stories of the minor gods, demons, rivers and animals including boars, buffalo, serpents and monkeys. Immensely varied and bursting with colour and life, they demonstrate the Hindu belief in the limitless possibilities of the world - from the teeming miracles of creation to the origins of the incarnation of Death who eventually touches them all.

The Hindu-Yogi Science Of Breath by Yogi Ramacharaka teaches advanced yoga techniques. For thousands of years, yogis have believed that breath is the essential link between body and mind, energizing a subtle body which connects the physical and mental aspects of our being. In this book, Swami Rama and two noted American physicians explore the science of breath as the missing key to both physical health and the attainment of higher states of consciousness. Basic yogic breathing techniques are explained so that one can immediately begin working with the ancient science of breath.

"The Knowledge Illusion is filled with insights on how we should deal with our individual ignorance and collective wisdom."  
 —Steven Pinker We all think we know more than we actually do. Humans have built hugely complex societies and technologies, but most of us don't even know how a pen or a toilet works. How have we achieved so much despite understanding so little?  
 Cognitive scientists Steven Sloman and Philip Fernbach argue that we survive and thrive despite our mental shortcomings because

we live in a rich community of knowledge. The key to our intelligence lies in the people and things around us. We're constantly drawing on information and expertise stored outside our heads: in our bodies, our environment, our possessions, and the community with which we interact—and usually we don't even realize we're doing it. The human mind is both brilliant and pathetic. We have mastered fire, created democratic institutions, stood on the moon, and sequenced our genome. And yet each of us is error prone, sometimes irrational, and often ignorant. The fundamentally communal nature of intelligence and knowledge explains why we often assume we know more than we really do, why political opinions and false beliefs are so hard to change, and why individual-oriented approaches to education and management frequently fail. But our collaborative minds also enable us to do amazing things. The Knowledge Illusion contends that true genius can be found in the ways we create intelligence using the community around us.

*THE UNTOUCHABLES* Rupa Publications

An engrossing and definitive narrative account of history and myth that offers a new way of understanding one of the world's oldest major religions, The Hindus elucidates the relationship between recorded history and imaginary worlds. The Hindus brings a fascinating multiplicity of actors and stories to the stage to show how brilliant and creative thinkers have kept Hinduism alive in ways that other scholars have not fully explored. In this unique and authoritative account, debates about Hindu traditions become platforms to consider history as a whole.

**Science and Religion in India** Himalayan Academy Publications  
 How do you build a scientifically and technologically strong modern nation with limited means and resources? Indian scientists faced this challenge seven decades ago when the country became independent and confronted a world rapidly advancing in science and technology. In the years that followed, they battled poor funding and archaic regulations to build India's science infrastructure from scratch. This fascinating narrative captures the story of the struggles and triumphs of these leaders of science and the world-class institutions they founded. From the

cosmic-ray experiments at the Kolar Gold Fields to ISRO's stunning space observatory built under severe constraints, from the construction of one of the world's largest radio telescopes in Ooty to the development of structural biology at IISc and, most recently, the significant contributions of the country's scientific institutions towards tackling a global pandemic - Space. Life. Matter. brings to readers the path-breaking advances made by India's scientists to original research and what they mean to the nation's progress. Deeply informed, enlightening and inspiring, this singular, comprehensive account of the pride of place that Indian science occupies in the world is essential reading for all.

We don't see them on TV, in textbooks or in newspapers, and most of us can't name a single one. But there are thousands of women scientists in India, who perform experiments in laboratories, peer through powerful telescopes and camp out in harsh and extreme conditions. This unique book presents the stories of thirty-one of these trailblazing women who work in a diverse array of fields, from environmental biotechnology to particle physics, palaeobiology to astrophysics. Through their research, they uncover the mysteries of the universe, find more sustainable ways of living, cure life-threatening diseases and study animals and plants that are long gone. Find out what drew them to science, read about how they deal with the difficulties and pressures of their work, and learn how they push the boundaries of human knowledge further and further every day.

*The Hidden Hindu 2* Penguin Books India

This book is entirely different from books that have been written on Indian civil societal relations, spiritual character, political economy, philosophical foundations, scientific roots, cultural essence, and historicity. It takes a journey from tribals upwards and looks at the pyramid of the communities in an inverse order. This book is an excise in new methodology, pedagogy, analysis, and synthesization of knowledge. Every chapter in this book reads like a new innovation in Indian social anthropology. It draws a different map for the future of this nation and its intellectual history.

Singular visions of the future that will thrill, amuse, startle and intrigue. On an ordinary morning, the citizens of Karachi wake up to discover the sea missing from their shores. The last Parsi left on Earth must look for other worlds to escape to when debt collectors come knocking. A family visiting a Partition-themed park gets more entertainment than they bargained for. Gandhi appears in the present day under rather unusual circumstances. Aliens with an agenda arrive at a railway station in Uttar Pradesh. Two young scientists seek to communicate with forests even as the web of life threatens to collapse. A young girl's personal tragedy finds a surprising resolution as she readies herself for an

expedition of a lifetime. These and other tales of masterful imagination illuminate this essential volume of new science fiction that brings together some of the most creative minds in contemporary literature. A must-have collectible, The Gollancz Book of South Asian Science Fiction offers fresh perspectives on our hyper-global, often alienating and always paranoid world, in which humanity and love may yet triumph.

This open access volume is the first comprehensive assessment of the Hindu Kush Himalaya (HKH) region. It comprises important scientific research on the social, economic, and environmental pillars of sustainable mountain development and will serve as a basis for evidence-based decision-making to safeguard the environment and advance people's well-being. The compiled content is based on the collective knowledge of over 300 leading researchers, experts and policymakers, brought together by the Hindu Kush Himalayan Monitoring and Assessment Programme (HIMAP) under the coordination of the International Centre for Integrated Mountain Development (ICIMOD). This assessment was conducted between 2013 and 2017 as the first of a series of monitoring and assessment reports, under the guidance of the HIMAP Steering Committee: Eklabya Sharma (ICIMOD), Atiq Raman (Bangladesh), Yuba Raj Khatiwada (Nepal), Linxiu Zhang (China), Surendra Pratap Singh (India), Tandong Yao (China) and David Molden (ICIMOD and Chair of the HIMAP SC). This First HKH Assessment Report consists of 16 chapters, which comprehensively assess the current state of knowledge of the HKH region, increase the understanding of various drivers of change and their impacts, address critical data gaps and develop a set of evidence-based and actionable policy solutions and recommendations. These are linked to nine mountain priorities for the mountains and people of the HKH consistent with the Sustainable Development Goals. This book is a must-read for policy makers, academics and students interested in this important region and an essentially important resource for contributors to global assessments such as the IPCC reports.

*Hindu Perspectives on Evolution* Motilal Banarsidass Publ.

To understand modern science as a coherent story, it is essential to recognize the accomplishments of the ancient Hindus. They invented our base-ten number system and zero that are now used globally, carefully mapped the sky and assigned motion to the Earth in their astronomy, developed a sophisticated system of medicine with its mind-body approach known as Ayurveda, mastered metallurgical methods of extraction and purification of metals, including the so-called Damascus blade and the Iron Pillar of New Delhi, and developed the science of self-improvement that is popularly known as yoga. Their scientific contributions made impact on noted scholars globally: Aristotle, Megasthenes, and Apollonius of Tyana among the Greeks; Al-Biruni, Al-Khwarizmi, Ibn Labban, and Al-Uqlidisi, Al-Ja'iz among the Islamic scholars; Fa-Hien, Hiuen Tsang, and I-tsing among the Chinese; and Leonardo Fibonacci, Pope Sylvester II, Roger Bacon, Voltaire and Copernicus from Europe. In the modern era, thinkers and scientists as diverse as Ralph Waldo Emerson, Johann Wolfgang von Goethe, Johann Gottfried Herder, Carl Jung, Max Müller, Robert Oppenheimer, Erwin Schrödinger, Arthur Schopenhauer, and Henry David Thoreau have acknowledged their debt to ancient Hindu achievements in science, technology, and philosophy. The American Association for the Advancement of Science (AAAS), one of the largest scientific organizations in the world, in 2000, published a timeline of 100 most important scientific finding in history to celebrate the new millennium. There were only two mentions from the non-Western world: (1) invention of zero and (2) the Hindu and Mayan skywatchers astronomical observations for agricultural and religious purposes. Both findings involved the works of the ancient Hindus. The Ancient Hindu Science is well documented with remarkable objectivity, proper citations, and a substantial bibliography. It highlights the achievements of this remarkable civilization through painstaking research of historical and scientific sources. The style of writing is lucid and elegant, making the book easy to read. This book is the perfect text for all students and others interested in the developments of science throughout history and among the ancient Hindus, in particular.

The book 'tu Vidy' emerged in search of answers to questions asked by adolescent girls and women in India during the author's interactions with them as part of Menstrual Health workshops, conducted over a span of a decade across rural India. In an attempt to decode menstrual practices, the author undertook a journey across India and studied various indigenous knowledge systems such as 'a-Dar'ana, 'yurved, Tantra, Cakra, Y'g, 'gama 'stra, Jyotis'a 'a'stra, and several sub-texts from these categories. As a result, the book goes beyond just describing cultural practices and takes a deep dive into explaining the scientific and logical reasoning behind the origin of these practices. This book is for all Indian women who have unanswered questions pertaining to menstrual practices, for menstrual researchers who will find a treasure trove of potential areas for research pertaining to menstrual health, for sportswomen to discover the ancient techniques that worked in sync with women's periods and not against it, and also for the feminist who assumes that cultural practices around menstruation are a taboo that needs to be done away with. The correct understanding of the science behind menstrual practices, as given in this book, will help women prevent menstrual difficulties, develop a positive attitude toward menstruation, and learn to work in sync with nature's cycles. 'tu (pronounced as ruthu) is one of the terms for menstruation in Sanskrit. Vidy' means knowledge. 'tu Vidy' is the author's attempt to bring together various indigenous knowledge systems that provide information about the science of menstruation, which is relevant even to this day.

A timely book to understand and put into perspective the vast corpus of the Hindu religious literature which a typical Western reader otherwise finds so daunting that he/she gets discouraged and simply gives up. Besides being of enormous value to spiritual seekers, the book is ideally suited for study in a classroom environment.

*The Hindu Yogi Science of Breath* Disha Publications

Providing new insights into the contemporary creationist-evolution debates, this book looks at the Hindu cultural-religious traditions of India, the Hindu Dharma traditions. By focusing on the interaction of religion and science in a Hindu context, it offers a global context for understanding contemporary creationist-evolution conflicts and tensions utilizing a critical analysis of Hindu perspectives on these issues. The cultural and political as well as theological nature of these conflicts is illustrated by drawing attention to parallels with contemporary Islamic and Buddhist responses to modern science and Darwinism. The book explores various ancient and classical Hindu models to explain the origin of the universe encompassing creationist as well as evolutionary—but non-Darwinian—interpretations of how we came to be. Complex schemes of cosmic evolution were developed, alongside creationist proofs for the existence of God utilizing distinctly Hindu versions of the design argument. After examining diverse elements of the Hindu Dharmic traditions that laid the groundwork for an ambivalent response to Darwinism when it first became known in India, the book highlights the significance of the colonial context. Analysing critically the question of compatibility between traditional Dharmic theories of knowledge and the epistemological assumptions underlying contemporary scientific methodology, the book raises broad questions regarding the frequently alleged harmony of Hinduism, the eternal Dharma, with modern science, and with Darwinian evolution in particular.
