Ever since the first interactions between Europeans and Native Americans, the "West" has served as a site of complex geographical, social and cultural transformation. American literature is defined, in part, by the central symbols derived from these points of contact. By the end of the nineteenth century, the Western frontier was declared "closed," a demise solidified by Frederick Jackson Turner's influential essay "The Significance of the Frontier in American History (1893). At the same time, "naturalism" was popularized by the writings of Frank Norris, Stephen Crane, Jack London, Willa Cather, and the photographs of Edward Curtis. Though very different artists, they

were united by their common attraction to the mythic American West. As she investigates the interactions of representations of the West, Lawlor effortlessly melds literary studies, American studies, and history. She traces the cultural conception of the American West through its incarnations in the "westernism" of Daniel Boone and James Fenimore Cooper and the romanticism of the expansive frontier they helped formulate. Simultaneously, however, the influence of evolutionism and the styles of French naturalism began to challenge this romantic idiom. This naturalistic discourse constructed the West as a strictly material place, picturing a limited and often limiting geography that portrayed regional identity as the product of material "forces" rather than of individualistic enterprise. With subtle, probing language, Lawlor explains how literary and artistic devices helped shape the idea of the American West and the changing landscape of the continent at the turn of the last century.

Essays tracing the intellectual life of a quintessential New York City writer and thinker Marshall Berman was one of the great urbanists and Marxist cultural critics of the twentieth and twenty-first centuries, and his brilliant, nearly sui generis book *All That Is Solid Melts Into Air* is a masterpiece

of the literature on modernism. But like many New York intellectuals, the essay was his characteristic form, accommodating his multifarious interests and expressing his protean, searching exuberant mind. This collection includes early essays from and on the radical '60s, on New York City, on literary figures from Kafka to Pamuk, and late essays on rock, hip hop, and gentrification. Concluding with his last essay, completed just before his death in 2013, this book is Berman's intellectual autobiography, tracing his career as a thinker through the way he read the "signs in the street."

Butler County is located in northeastern Iowa and is bordered by Floyd, Bremer, Black Hawk, Grundy and Franklin Counties. The first permanent settler in the county was Joseph Hicks, who made his way up Shell Rock and established himself near the present site of the town of Clarksville. This book follows the early settlers up to 1883, the date of original publication. Topics of interest include: topography and agriculture; county government, political affairs and county seat struggles; population; the courts; local surgeons and the medical profession; the press; the old settlers' society; the role of the county in the Civil War; education; societies and public meetings. The text also covers the townships of Albion, Beaver, Benezette, Butler, Coldwater, Dayton, Fremont, Jackson, Jefferson, Madison, Monroe, Pittsford, Ripley, Shell Rock, Washington and West Point. Biographical information is provided for notable citizens such as David Ackerman, Peter Cayle, F.L. Dodge, John Harlan, George R. Peet, Jeremiah Perrin, Solomon Sturtz, Milton Wilson and many others. Illustrated, with a new surname index.

Tracing words to their origins opens a new window to human civilization and culture and helps us understand the roots of some of our present social trends and attitudes. For example, the etymology of words for family members clearly shows the division of responsibilities in the most basic unit of society - the family. Father was the "protector" of the family (Pa: protect), mother was the "feeder"(Ma: breast), brother was the load "carrier" (Bher: carry) and daughter was the "milker" (Dhugh: to milk). If one makes the effort to read beyond the shallow shell of sounds and symbols, one can recognize our human oneness portrayed in our words and their historical roots. The primary motivation for writing this dictionary is the hope that it would foster a greater appreciation for the commonality in the apparent variance among different languages and cultures, and ultimately nurture a greater understanding among those who speak apparently different languages. In tracing any Persian word to its origins, its cognates in other Indo-European languages must be considered. In this dictionary, English cognates are regularly referred to along with some other Indo-European equivalents. Altogether, over 1,600 roots and 17,400 derived

words are presented in this dictionary. One of the most unique features of this dictionary is its graphical presentation of etymological data, similar to a family tree. The derivations of words are indicated with arrows rather than lengthy text. The arrows greatly simplify the process of tracing words to their roots.

In 1934, Commissioner of Indian Affairs John Collier began a series of "congresses" with American Indians to discuss his proposed federal bill for granting self-government to tribal reservations. In "The Indian Reorganization Act," Vine Deloria, Jr., compiled the actual historical records of those congresses and made available important documents of the premier years of reform in federal Indian policy as well as the bill itself.

This anthology brings together the few essays on Lumia that were published during Thomas Wilfred's lifetime. Wilfred, an artist who experimented with a form of visual music he called

"Lumia" developed an entire aesthetic system that could either be performed live, or set-up as an automatic display. His instrument, the Clavilux, was subject of several patents, collected along with images from Opus 161. Together these essays, the patents, and selected images provide a clear description of Lumia, what Wilfred described as "the eighth art."

Design has now become an important research topic in engineering and architecture. Design is one of the keystones to economic competitiveness and the fundamental precursor to manufacturing. The development of computational models founded on the artificial intelligence paradigm has provided an impetus for current design research. This volume contains contributions from the Second International Conference on Artificial Intelligence in Design held in June 1992 in Pittsburgh. They represent the state-of-the-art and the cutting edge of research and development in this field. They are of particular interest to researchers, developers and users of computer systems in design. This volume demonstrates both the breadth and depth of artificial intelligence in design and points the way forward for our understanding of design as a process and for the development of computer-based tools to aid designers.
