 Robust Nonlinear Control Design State  
 This book presents advances in the theory and design of robust nonlinear control systems. In the first part

of the book, the authors provide a unified framework for state-space and Lyapunov techniques by combining concepts from set-valued analysis, Lyapunov stability theory, and game theory. Within this unified framework, the authors then develop a variety of control design methods suitable for systems described by low-order nonlinear ordinary differential equations. Robust Nonlinear Control Design - State-Space and Lyapunov ... Buy Robust Nonlinear Control Design:

of a hypersonic aircraft in the presence of aerothermoelastic effects. Adaptive control of hypersonic vehicles in the presence of modeling uncertainties. On convex parameterization of robust control design for minimizing (conditional) performance at risk. Robust Nonlinear Control of a Hypersonic Aircraft ...Recently, robust control design methods for nonlinear aircraft flight dynamics have been addressed by many researchers [ 5 - 7 ]. Twenty-eight uncertain

parameters are used to model aircraft motion in nonlinear longitudinal dynamics [ 5 ]. A Novel Hybrid Robust Control Design Method for F-16 ...parameters and model error, a practical nonlinear model is obtained, and a nonlinear robust control design with uncertainties and input constraints using operator-based robust right coprime factorization is proposed. The effectiveness of the proposed control method based on obtained nonlinear model is

confirmed by simulation and experimental results. Operator based Robust Nonlinear Control Design to an Ionic ...PROBLEM FORMULATION We shall consider the following single-input-single-output uncertain nonlinear system with a state-dependent control direction  $\mathbf{1}$  where  $t \in [0, +\infty)$  is the time,  $x \in \mathbb{R}$  is the state,  $u \in \mathbb{R}$  is the control,  $f(x)$  and  $a(x)$  are continuous functions.  $f(x)$  is the uncertain dynamics, and  $a(x)$  is the unknown control

direction, which is piecewise continuous and allowed to smoothly cross zero and change its sign. Robust control for uncertain nonlinear systems with state ... For a class of one-sided Lipschitz systems with time-varying delays and parameter uncertainties, the robust control problem of the system based on state observer is elaborated in detail. By constructing Lyapunov-Krasovskii functional for closed-loop augmented system and combining one-sided

Lipschitz condition and quadratically inner-bounded condition, the synthesis condition of observer ... Robust control for one-sided Lipschitz non-linear systems ... To guarantee the closed-loop system's robust stability and performance with the designed controllers, a systematic approach has been proposed for the design of robust gain-scheduled controllers for nonlinear processes. The design procedure is based on robust stability and performance conditions proposed in this work. For

time-varying uncertain parameters, robust stability and performance conditions using fixed Lyapunov functions and parameter-dependent Lyapunov functions, were used. Robust Control Design of Gain-scheduled Controllers for ... A robust switching control law is proposed to stabilize the switched affine system. The design procedure involves solving an optimization problem that is nonconvex in a single scalar variable only. Furthermore, we provide the sufficient conditions

under which the proposed switching law is able to stabilize the original switched nonlinear system. Robust  $H_\infty$  switching control techniques for switched ... Robust adaptive control of a class of nonlinear systems: state and output feedback. A new adaptive design procedure is presented which guarantees robustness to parametric and dynamic uncertainties for a class of nonlinear systems, and also rejects any bounded, unmeasurable disturbances entering the

system. The uncertainties in the system are assumed to be unknown, except that they are bounded by an unknown  $p$ th order polynomial; in the arguments. In this paper we develop a robust adaptive control design for a class of nonlinear uncertain systems. The uncertainty in the class of systems that we consider is due to both parametric uncertainty and unknown nonlinear functions. These unknown functions could be due to modeling errors, external

disturbances, time variations in the system, or a combination of these. *Robust Nonlinear Control of a Hypersonic Aircraft ...* Robust adaptive control of a class of nonlinear systems: state and output feedback. A new adaptive design procedure is presented which guarantees robustness to parametric and dynamic uncertainties for a class of nonlinear systems, and also rejects any bounded, unmeasurable disturbances entering the system. The uncertainties in the system are

assumed to be unknown, except that they are bounded by an unknown  $n$ th order polynomial; in the arguments.
