Lambers CPA Review

The Nevada Test Site (NTS) has transitioned from its historical role of weapons testing to a broader role that is focused on being a solution to multiple National Nuclear Security Administration (NNSA) challenges and opportunities with nuclear materials for the nation. NTS is supporting other NNSA sites challenged

with safe nuclear materials storage and disposition. NNSA, with site involvement, is currently transforming the nuclear stockpile and supporting infrastructure to meet the 2030 vision. Efforts are under way to make the production complex smaller, more consolidated, and more modern. With respect to the nuclear material stockpile, the NNSA sites are currently reducing the complex nuclear material inventory through dispositioning and consolidating nuclear

material. This includes moving material from other sites to NTS. State-of-the-art nuclear material management and control practices at NTS are essential for NTS to ensure that these new activities are accomplished in a safe, secure, efficient, and environmentally responsible manner. NTS is aggressively addressing this challenge.

This book presents a
 history of shock
 compression science,
 including development of
 experimental, material
 modeling, and
 hydrodynamics code
 technologies over the past
 six decades at Sandia
 National Laboratories. The
 book is organized into a
 discussion of major
 accomplishments by
 decade with over 900

references, followed by a
 unique collection of 45
 personal recollections
 detailing the trials,
 tribulations, and
 successes of building a
 world-class organization
 in the field. It explains
 some of the challenges
 researchers faced and the
 gratification they
 experienced when a
 discovery was made.

Several visionary
 researchers made
 pioneering advances that
 integrated these three
 technologies into a
 cohesive capability to
 solve complex scientific

and engineering
 problems. What
 approaches worked,
 which ones did not, and
 the applications of the
 research are described.
 Notable applications
 include the turret
 explosion aboard the USS
 Iowa and the Shoemaker-
 Levy comet impact on
 Jupiter. The personal
 anecdotes and
 recollections make for a
 fascinating account of
 building a world-renowned
 capability from meager
 beginnings. This book will
 be inspiring to the expert,
 the non expert, and the

early-career scientist. Undergraduate and graduate students in science and engineering who are contemplating different fields of study should find it especially compelling.
