 Nuffield Council on Bioethics annual lecture 2015: in conversation with Dr Amy Gutmann

Genetics and human behaviour: the ethical context. Research is exploring how genes and the environment influence behavioural traits such as aggression, anxiety, intelligence and sexual orientation. This report addresses concerns over how this information could be used to try to predict, change or select such traits.

Genetics and - Nuffield Council on Bioethics

The Nuffield Council on Bioethics has published a Report, Genetics and human behaviour: the ethical context, which examines

the ethical, legal and social issues that behavioural genetics raises. This summary sets out some of the arguments and recommendations which are discussed in more detail in the Report.

Genetics and human behaviour: the ethical context

Genetics and Human Behaviour: the ethical context. 1 To define and consider ethical, social and legal issues arising from the study of the genetics of variation within the normal range of behavioural characteristics. 1. 2 To survey the current field of research, in particular, to review:

Genetics And Human Behaviour Nuffield Bioethics

How genetic influence on human behaviour changes in time and place. Research shows how genes affect educational attainment and fertility in different

times and places. A new study led by Professor Melinda Mills shows that genes linked with education and fertility depend on when and where you live. This means we could be missing important variations when we try to draw conclusions about the influence of genes on human behaviour, because combining data sets from vastly different countries and ...

Human Genetics Alert response to Nuffield Council consultation on behavioural genetics

Introduction. Human Genetics Alert is an independent watchdog group focusing on social and ethical issues raised by human genetics and reproductive technologies. Question 4.1: What you think are the likely advantages and disadvantages of research in behavioural genetics? We see few advantages, and few are mentioned in the consultation paper itself.

Bioethics aims of current behavior genetics is to use genetic methodology to learn more about the behavior. We don't simply want to know the heritability of a behavior. That has as much use as stamp-collecting. We want to use the methods of behavior genetics to provide unique insights into the behavior. You would not guess this from the four chapters Who should fund and control the direction of human ...In this (Nuffield Council on Bioethics 2002), the third in its series on ethics and related issues in genetics (see also Nuffield Council on Bioethics 1993 and Nuffield Council on Bioethics 1998), the Nuffield Council has focused on four 'normal' behaviors; intelligence, personality, antisocial behavior and sexual orientation. This is a narrow range of behaviors and one where their discussion of the potential impact of predictive genetic testing is probably inappropriate.
