This book offers a case-study approach to stakeholder theory that moves beyond theoretical analysis to the applied. As stakeholder theory has moved into the mainstream of management thinking in business ethics and a number of the management disciplines, there is an increasing need to explore the subtleties of stakeholder engagement via examples from practice. The case studies in this volume explore a number of aspects of the idea of stakeholder engagement, via the method of clinical case studies. Edited by leading scholars in the field of business ethics and stakeholder theory, this text affords a solid grounding in theory, brought to new levels of applied understanding of stakeholder engagement.

The Routledge Companion to Marketing Research Springer Nature

Bringing together international authors, this edited collection addresses the need for greater inclusivity within organizational policy and practice, in order to tackle both visible and invisible inequalities amongst employees.

Evidence suggests that more positive employment relationships can be brought about by tackling diversity issues, yet there are still 'grey areas' existing in the current legislative framework. Volume I explores the way that these hidden inequalities can be used to identify an individual as 'other,'

and how this ultimately affects their wellbeing and welfare at work. Analysing social justice and stigma, as well as nuanced issues within the workplace, this book is a thought-provoking read for scholars of HRM, practitioners and policy-makers.

Exploiting the Knowledge Economy MDPI

The proliferation of entrepreneurship, technological and business innovations, emerging social trends and lifestyles, employment patterns, and other developments in the global context involve creative destruction that transcends geographic and political boundaries and economic sectors and industries. This creates a need for an interdisciplinary exploration of disruptive technologies, their impacts, and their implications for various stakeholders widely ranging from government agencies to major corporations to consumer groups and individuals. *Disruptive Technology: Concepts, Methodologies, Tools, and Applications* is a vital reference source that examines innovation, imitation, and creative destruction as critical factors and agents of socio-economic growth and progress in the context of emerging challenges and opportunities for business development and strategic advantage. Highlighting a range of topics such as IT innovation, business strategy, and sustainability, this multi-volume book is ideally designed for entrepreneurs, business executives, business professionals, academicians, and researchers interested in strategic decision making using innovations and competitiveness.

These proceedings represent the work of presenters at the 3rd European Conference on Intellectual Capital (ECIC

2011). The Conference is hosted this year by the University of Nicosia in Cyprus. The Conference Chair is Geoff Turner from the University of Nicosia and the Programme Chair is Clemente Minonne from the School of Management and Law, Zurich University of Applied Sciences, Winterthur, Switzerland. The opening keynote address is given by John Girard from Minot State University in the USA. John will address the question Social Knowledge: Are we ready for the future? The second day of the conference will be opened by Ludo Pyis from AREOPA in Belgium who will consider Intellectual Capital Accounting: how to measure the unmeasurable. We also look forward to a Knowledge Cafe on the topic of What intellectual capital ideas and developments do you expect to live and see? facilitated by Helen Paige from The Paige Group, South Australia.

"Adaptation of applied Information and Communication Technologies (ICT) research results is one of the greatest challenges faced today in building the global Knowledge Economy. While research challenges can be quite similar across the world thus facilitating cross-border cooperation between researchers, government and industry, how actual research results can be exploited or implemented can vary considerably depending on the social, cultural and infrastructural context of the target country, province or region. This offers opportunities as well as challenges in terms of how applied ICT can be used to both support economic development and inform future research

challenges. When cross-border collaboration is effective, there can be a valuable exchange of knowledge that can not only lead to successful adaptation of research results or lessons learnt from successful implementations in other countries, but can also provide insight into different problem solving techniques and new ways of thinking that can enrich the ICT research agenda. It is only through such mutually beneficial shared insight that the Digital Divide can be bridged. This set of two books brings together a comprehensive collection of over 220 contributions on commercial, government or societal exploitation of applied ICT, representing cutting edge research, good practice and practical eAdoption from Africa, the Americas, Asia & Europe."

Around the world, there is mounting evidence that parks and protected areas contribute to a healthy civil society, thus increasing the economic importance of cultural and nature-based tourism. Operating at the intersection of business and the environment, tourism can improve human health and wellbeing as well as serve as a catalyst for increasing appreciation and stewardship of the natural world. While the revenues from nature-based activities help to make the case for investing in park and protected area management; the impacts they have need to be carefully managed, so that visitors do not destroy the natural wonders that attracted them to a destination in the first place. This book features contributions from tourism and recreation researchers and practitioners exploring the relationship between tourism, hospitality, protected areas, livelihoods and both physical and emotional human wellbeing. The book

includes sections focused on theory, policy and practice, and case studies, to inform and guide industry decisions to address real-world problems and proactively plan for a sustainable and healthy future.

Web services and Service-Oriented Computing (SOC) have become thriving areas of academic research, joint university/industry research projects, and novel IT products on the market. SOC is the computing paradigm that uses Web services as building blocks for the engineering of composite, distributed applications out of the reusable application logic encapsulated by Web services. Web services could be considered the best-known and most standardized technology in use today for distributed computing over the Internet. This book is the second installment of a two-book collection covering the state-of-the-art of both theoretical and practical aspects of Web services and SOC research and deployments.

Advanced Web Services specifically focuses on advanced topics of Web services and SOC and covers topics including Web services transactions, security and trust, Web service management, real-world case studies, and novel perspectives and future directions. The editors present foundational topics in the first book of the collection, *Web Services Foundations* (Springer, 2013). Together, both books comprise approximately 1400 pages and are the result of an enormous community effort that involved more than 100 authors, comprising the world's leading experts in this field.

Death in a Coral Sea, 1971 This book

reports on the World Bank's 5th Annual

Conference on Environmentally and

Socially Sustainable Development, which

focused on some of the most urgent

threats facing coral reefs today,

including the growing use of cyanide

fishing along some of the richest reefs of

the world, unsustainable trade in reef

products, and constraints to effective establishment and management of marine protected areas. The proceedings stressed the need for strengthening the policy environment while adopting economic incentives and improved resource valuation techniques, informing management decisions through targeted research and monitoring, and rallying public support through environmental education and the media.

Inclusivity is a crucial factor in assessment design as fair assessment must reflect the needs of a diverse

student body. Assessment practices should also be culturally inclusive and supportive to all students while considering the needs of learners with disabilities and specific learning difficulties. Educational institutions worldwide are adopting a range of principles, using a variety of assessment methods, and developing assessment literacy. All these issues must be considered when researching inclusive assessment practices and policies. The Handbook of Research on Policies and Practices for Assessing Inclusive Teaching and Learning discusses the needs of learners of any context, background, and culture. This book strives to promote the importance of global inclusive assessment and teaching, giving an understanding to educators and faculty of the negative effect uniform assessment and teaching strategies have on a diverse body of students. Covering topics such as equitable design, ethnic preferential policies, and multilingual perspectives, this book provides an indispensable resource for researchers, practitioners, educators, teacher educators, policymakers, administrators, program planners, educational managers, educational leaders, professors, and academicians.
