MEG: Nightstalkers Tor Books

New York Times bestselling author Steve Alten's Meg: Hell's Aquarium continues his thrilling action adventure series--the basis for the feature film The Meg, starring Jason Statham as Jonas Taylor. The most fearsome predators in history...are no longer history. The Philippine Sea Plate: The most unexplored realm on the planet. Hidden beneath its primordial crust lies the remains of the Panthalassa, an ocean that dates back 220 million years. Vast and isolated, the Panthalassa is inhabited by nightmarish sea creatures long believed extinct. Tanaka Institute, Monterey, CA: Four years have passed since Angel, the 76-foot, 100,000 pound Megalodon, birthed a litter of pups far too numerous and aggressive to keep in one pen. Fortunately, a Dubai royal prince who is building the largest aquarium in the world seeks to purchase two of the "runts"—if Jonas Taylor's twenty-one year-old son, David, will be their handler. Jonas reluctantly agrees, and David is off to Dubai for the summer of his life, not realizing that he is being set up to lead an expedition that will hunt down and capture the most dangerous creatures ever to inhabit the Earth! Time and again, Emily-- Em-- Hansen uses her geological training and her unflinching scientist's eye to sniff out a killer. Now in her newest case, Em heads to Utah for a paleontology conference and ends up embroiled in murder when her host, a notorious dinosaur expert, ends up dead, stabbed with a dinosaur bone. The high-stakes world of dinosaur study and research, coupled with the secrets of a conservative sect of Mormonism, provide the suspects and Em, if she isn't buried like so many fossils by a determined killer, is forced to provide the solution.

TV scientist Prof Ben Garrod presents the biggest extinction events ever, told from the point of view of evolution's superstars, the most incredible animals ever to swim, stalk, slither or walk our planet.

Whether you're 9 or 90, his unique exploration of the most destructive, yet most creative, force in nature makes top level science fun. Here are the superstars of the story of life, from the super-weird to the super-ferocious. Usually a species has 10 million years or so of evolving, eating, chasing, playing, maybe doing homework, or even going to the moon before it goes extinct. Megalodon, the super-predator, had the most powerful bite force ever measured! Terrorising the oceans, it hunted with stealth and skill, but even Megalodon died out, along with 50 percent of marine mammals, 2.5 million years ago. Find out why! 'An accessible, beautifully illustrated book that covers millions of years of natural history by focusing on one particularly deadly predator... I am intrigued to read the other books in the series' LoveReading Collect all eight books about animals we have lost in mass extinctions caused by asteroids or mega-volcanoes, clashing continents and climate change. Past brought to full-colour life by palaeoartist Gabriel Ugueto

Master of suspense Steve Alten always takes readers to the edge with his non-stop, adrenaline-charged novels. Just in time for the movie, this new edition of his New York Times and USA Today bestselling sequel to MEG shows just how deep fear can run when you don't know what lurks beneath the surface... Its appetite is ravenous. Its teeth, scalpel-sharp. For the first time, the captive 20-ton Megalodon shark has tasted human blood, and it wants more... On the other side of the world, in the silent depths of the ocean, lies the Marianas Trench, where the Megalodon has spawned since the dawn of time. Paleobiologist Jonas Taylor once dared to enter this perilous cavern. He alone faced a Megalodon shark and cut its heart out. Now, as the body count rises and the horror of a monster's attack grips the California coast, Jonas must begin the hunt again, and return to the waking nightmare of...

English adventurer Sir Jeffery Mallory charts a ship for a top secret expedition to Antarctica. What starts out as a search and capture mission soon turns into a terrifying fight for survival as the crew come face to face with the fiercest ocean predator to have ever existed- Carcharodon Megalodon. Alone and with no hope of rescue the crew will need all their resources if they are to survive not only a 60 foot shark but also the harsh Antarctic conditions. Megalodon: Apex Predator is a deep-sea adventure filled with action, twists and savage prehistoric sharks.

MEG: Primal Waters Bantam

New York Times bestselling author Steve Alten's Meg: Primal Waters continues his thrilling action adventure series--the basis for the feature film The Meg, starring Jason Statham as Jonas Taylor. Eighteen years have passed since Angel, the Megalodon shark broke free of the Tanaka Lagoon and returned to the Mariana Trench. Meanwhile, Jonas Taylor-adventurer, has become Jonas Taylor, middle-aged father of two, overwhelmed by mountains of bills and the daily strife of raising a family. But life is about to change. A Hollywood television producer wants Jonah to join his new survival series: Daredevils. For the next six weeks, two teams of crazy daredevils on a South Pacific Ocean voyage on-board a replica of a Spanish Galleon will try to outperform one another in front of the cameras. Jonas needs the money, and the job seems easy enough--doing color commentary. But behind the scenes, someone else is pulling the strings. And before it's over, Jonas, Terry, and Mac will again come face to face with the most dangerous creatures ever to stalk the Earth. Famed in story as "the great leviathans," sperm whales are truly creatures of extremes. Giants among all whales, they also have the largest brains of any creature on Earth. Males can reach a length of sixty-two feet and can weigh upwards of fifty tons. With this book, Hal Whitehead gives us a clearer picture of the ecology and social life of sperm whales than we have ever had before. Based on almost two decades of field research, Whitehead describes their biology, behavior, and habitat; how they organize their societies; and how their complex lifestyles may have evolved in this unique environment. Among the many fascinating topics he explores is the crucial role that culture plays in the life of the sperm whale, and he traces the consequences of this argument for both evolution and conservation. Finally, drawing on these findings, Whitehead builds a general model of how the ocean environment influences social behavior and cultural evolution among mammals as well as other animals. The definitive portrait of a provocative creature, Sperm Whales will interest animal behaviorists, conservationists, ecologists, and evolutionary biologists as well as marine mammalogists.

MEG: The Graphic Novel A beautifully illustrated graphic novel based on New York Times bestselling author Steve Alten's novel and Soon to Be a Major Motion Picture directed by Jon Turteltaub and starring Jason Statham as Jonas Taylor. Once a Navy deep-sea submersible pilot, now a marine paleontologist, Dr. Jonas Taylor is convinced that a remnant population of Carcharodon Megalodon--prehistoric sharks growing up to 70 feet long, that subsisted on whales--lurks at the bottom of the Mariana Trench. When offered the opportunity to return to those crushing depths in search of the MEG, Taylor leaps at the chance... but the quest for scientific knowledge (and personal vindication) becomes a desperate fight for survival, when the most vicious predator that the earth has ever known is freed to once-again hunt the surface. This graphic novel is illustrated by super star artist Mike S. Miller, artist of George R.R. Martin's Game of Thrones prequel "The Hedge Knight" graphic novel and the number 1 bestselling digital comic series, DC Comics "Inhumans."
