Love and Honour?

National Academies Press
Infectious diseases are
the leading cause of
death globally,
particularly among
children and young adults.

The spread of new
pathogens and the threat
of antimicrobial resistance
pose particular challenges
in combating these
diseases. Major Infectious
Diseases identifies
feasible, cost-effective
packages of interventions
and strategies across
delivery platforms to
prevent and treat
HIV/AIDS, other sexually

transmitted infections,
tuberculosis, malaria,
adult febrile illness, viral
hepatitis, and neglected
tropical diseases. The
volume emphasizes the
need to effectively
address emerging
antimicrobial resistance,
strengthen health
systems, and increase
access to care. The
attainable goals are to

reduce incidence, develop innovative approaches, and optimize existing tools in resource-constrained settings.

Varcarolis' Foundations of Psychiatric Mental Health Nursing National Academies Press

This volume constitutes selected papers presented at the Third International Conference on Artificial Intelligence and Speech Technology, AIST 2021, held in Delhi, India, in November 2021. The 36 full papers and 18 short papers presented were thoroughly reviewed and

selected from the 178 submissions. They provide a discussion on application of Artificial Intelligence tools in speech analysis, representation and models, spoken language recognition and understanding, affective speech recognition, interpretation and synthesis, speech interface design and human factors engineering, speech emotion recognition technologies, audio-visual speech processing and several others.

[Pain Management and the Opioid Epidemic](#) Taylor & Francis

Drug overdose, driven largely by overdose related to the use of opioids, is now the leading cause of unintentional injury death in the United States. The ongoing opioid crisis lies at the intersection of two public health challenges: reducing the burden of suffering from pain and containing the rising toll of the harms that can arise from the use of opioid medications. Chronic pain and opioid

use disorder both represent complex human conditions affecting millions of Americans and causing untold disability and loss of function. In the context of the growing opioid problem, the U.S. Food and Drug Administration (FDA) launched an Opioids Action Plan in early 2016. As part of this plan, the FDA asked the National Academies of Sciences, Engineering, and Medicine to convene a committee to update the state of the science on pain research, care, and education and

to identify actions the FDA and others can take to respond to the opioid epidemic, with a particular focus on informing FDA's development of a formal method for incorporating individual and societal considerations into its risk-benefit framework for opioid approval and monitoring. [Artificial Intelligence and Speech Technology](#) Balboa Press This issue of Emergency Medicine Clinics, guest edited by Joshua Joseph and Benjamin White,

focuses on Emergency Department Operations and Administration. Topics include: Emergency Department Operations Overview; Queuing Theory and Modeling ED Resource Utilization; Factors Affecting ED Crowding; Staffing and Provider Productivity in the ED; Patient Assignment Models in the ED; ED Layout and Organization; Lean Processes in the ED; ED Observation and Alternatives to Admission; Quality Assurance in the ED; Information

Management in the ED; Best Practices in Communication and Patient Safety; Optimizing Patient Experience in the ED; Management of the Academic ED; and Strategies for Provider Well-being in the ED. *The Path Ahead* Oxford University Press

Getting the right diagnosis is a key aspect of health care - it provides an explanation of a patient's health problem and informs subsequent health care decisions. The diagnostic process is a complex, collaborative

activity that involves clinical reasoning and information gathering to determine a patient's health problem. According to *Improving Diagnosis in Health Care*, diagnostic errors-inaccurate or delayed diagnoses-persist throughout all settings of care and continue to harm an unacceptable number of patients. It is likely that most people will experience at least one diagnostic error in their lifetime, sometimes with devastating consequences. Diagnostic errors may cause harm to

patients by preventing or delaying appropriate treatment, providing unnecessary or harmful treatment, or resulting in psychological or financial repercussions. The committee concluded that improving the diagnostic process is not only possible, but also represents a moral, professional, and public health imperative. *Improving Diagnosis in Health Care*, a continuation of the landmark Institute of Medicine reports *To Err Is Human* (2000) and

Crossing the Quality Chasm (2001), finds that diagnosis-and, in particular, the occurrence of diagnostic errors"has been largely unappreciated in efforts to improve the quality and safety of health care. Without a dedicated focus on improving diagnosis, diagnostic errors will likely worsen as the delivery of health care and the diagnostic process continue to increase in complexity. Just as the diagnostic process is a collaborative activity, improving diagnosis will

require collaboration and a widespread commitment to change among health care professionals, health care organizations, patients and their families, researchers, and policy makers. The recommendations of Improving Diagnosis in Health Care contribute to the growing momentum for change in this crucial area of health care quality and safety. *National Education Policy (NEP 2020)* Elsevier Health Sciences Love and Honour?

Marriage for Peace, exposes the ongoing phenomenon of Romeo and Juliet style romance tragedy; families killing their own and other families' daughters, sons, sisters and brothers in the name of family 'honour". Focused on Northern India and Nepal, the stories illustrate that despite India adopting a democratic constitution in 1950, the public murder of forbidden lovers continues. Media reports of this phenomenon did not surface until 1993, but have increased

dramatically since then. Love and Honour? Marriage for Peace has been written to seek a path from murder to reconciliation, to acceptance and ultimately to marriage for peace. Fluoxetine Bloomsbury Publishing
The book will help readers to discover the meaning of inner peace and happiness by living the consciousness that has been meticulously explained in the book. The book explains various techniques of transcending the separate

self- the mind and body combination, based on experiential knowledge of Kashmiri mystics and the followers of the Shaivite School of the philosophy of Kashmir. The author, however, cautions us to the dangers of downplaying the role of religions or form, in the name of mysticism, sold to many, eager for spiritual experience. An intense spiritual and life-changing book.

Understanding Social Exclusion Springer
Nature
This book is a portrait of Rajiv Gandhi by the person who knew him best: his wife Sonia. It is in four parts, the first and last being in the nature of meditations - one in words, the other in images. In the first, Sonia Gandhi reveals Rajiv through recollections and reflections, delicate and restrained in tone but powerful in resonance. In

the last, Rajiv discloses the essence of himself in a gallery of his own photographs. The biographical narrative in between progresses through pictures and extended captions, interweaving Rajiv's personal history with the milieu in which it unfolded.

Rajiv Sristhi Publishers & Distributors

This book deals primarily with the National Education Policy 2020 of India. In the book, an attempt has been made to highlight the provisions

of the latest National Education Policy in comparison with some best education systems in the world such as the USA, the UK, and Finland. The comparative analysis with these countries has made this book unique and interesting to read. The examination of elementary as well as secondary education of Japan, and the best practices of Finnish schools and government have opened up a new door of knowledge to the readers. This book has been written mainly for

students, teachers, guardians, and other stakeholders, who are actually going to benefit from the National Education Policy 2020. India's future growth and genuine sustainable development can only be achieved through the proper implementation of the NEP-2020.

Improving Diagnosis in Health Care Springer
Fluoxetine, best known by the trade name Prozac®, unlike other psychotropic drugs whose effects were serendipitously stumbled upon, was the first

developed for a precise mechanism of action, that is, the ability to selectively inhibit serotonin reuptake, based upon the theory that increasing the availability of serotonin would treat major depression. Once approved by the FDA in 1987, fluoxetine quickly became the most prescribed psychotropic drug worldwide and its success in improving mood disorders has triggered the development of a large number of congener molecules, commonly

known as SSRIs after their purported mechanism of action. However, a quarter of a century after its development, the idea that fluoxetine asserts its positive behavioral effect through inhibition of serotonergic reuptake is not firmly established. This book reviews several preclinical and clinical reports suggesting that the pharmacological effects of fluoxetine may be mediated by means other than the regulation of serotonin, including the regulation of gene expression, modifying

epigenetic mechanisms as well as modifying microRNAs. One of the most prominent mechanisms for the therapeutic relevance of fluoxetine relates to influencing neuroplasticity by enhancing neurotrophic factors, including BDNF signaling and altering adult neurogenesis. The ability of fluoxetine to rapidly increase neurosteroid levels accounts for the fast anxiolytic effects of this drug. Fluoxetine action at sigma-1 receptor or modulating glutamatergic

neurotransmission as well as the combination of fluoxetine with other psychotropic drugs is discussed in relation to its therapeutic effects. While fluoxetine was primarily prescribed as an antidepressant, this drug currently represents a treatment of choice for a broad spectrum of psychiatric disorders, including post-traumatic stress disorder and a range of anxiety disorders. This drug even possesses analgesic actions and is a valuable therapy for stroke. This

book also highlights emerging evidence on the gender-specific effects of fluoxetine, its potential adverse features, including its addiction liability in combination with psychostimulants, and the impact of perinatal fluoxetine exposure.

The Mis-education of the Negro Read Books Ltd
Corneal transplantation has been performed with increasing success for more than 100 years. In the last 20 years, standards, outcomes and developments in the field

of corneal transplantation and eye banking have been discussed at the annual meetings of the European Eye Bank Association (EEBA) to share and promote good practice and guarantee a high level of safety for the recipients. The EEBA standards for donor selection and eye banking provide professional advice and guidance to eye banks and corneal surgeons. This book highlights the history and development of eye banking and all significant steps including the

donation, processing and distribution of corneas for transplantation. Additional contributions on the sclera, amnion and retinal pigment epithelium provide further insights into ocular surgery and the future potential for transplantation. This book contributes the essentials in eye banking activities for ophthalmologists and eye bankers as well as for regulatory and legislative authorities.

Great Soul Springer

The first title in an exciting, unofficial MINECRAFT-fan adventure

series inspired by the bestselling game. Dark forces are at work on the Elementia server, and when new players Stan, Kat and Charlie arrive on the scene, they quickly find themselves in peril. Targeted by more experienced players, the noobs must band together against the King, battle the natural forces of the game, and unravel the mysteries of Elementia in the name of justice.

Revisiting Gandhi Viking Adult

This book reports on the state of academic journal publishing in a range of geolinguistic contexts, including locations where pressures to publish in English have developed more recently than in other parts of the world (e.g. Kazakhstan,

Colombia), in addition to contexts that have not been previously explored or well-documented. The three sections push the boundaries of existing research on global publishing, which has mainly focused on how scholars respond to pressures to publish in English, by highlighting research on evaluation policies, journals' responses in non-Anglophone contexts to pressures for English-medium publishing, and pedagogies for supporting scholars in their

publishing efforts.

Mr and Mrs Jinnah

Elementia Chronicles
While the nation was celebrating Independence from British Rule and singing all praises for the 'Father of The Nation' - Mahatma Gandhi, the news of his assassination came as a shock. He was shot in the chest three times while he was walking towards the prayer grounds at the Birla House, New Delhi. The man behind the assassination - Nathuram Godse was a well known nationalist. He was

arrested at the crime scene and sentenced to death after a year long trial. The book contains the final speech given by Godse in the court, mentioning the reason behind the drastic step he took.

Why I Killed Gandhi

Oxford University Press, USA

This text explores the issue of social exclusion, considering its measurement, main determinants, and ways in which it may be reduced. The editors show how a focus on the topic may

alter the relevant policy questions by fostering debate in government.

Medications for Opioid Use Disorder Save

Lives National Academies Press

The opioid crisis in the United States has come about because of excessive use of these drugs for both legal and illicit purposes and unprecedented levels of consequent opioid use disorder (OUD). More than 2 million people in the United States are estimated to have OUD, which is caused by

prolonged use of prescription opioids, heroin, or other illicit opioids. OUD is a life-threatening condition associated with a 20-fold greater risk of early death due to overdose, infectious diseases, trauma, and suicide. Mortality related to OUD continues to escalate as this public health crisis gathers momentum across the country, with opioid overdoses killing more than 47,000 people in 2017 in the United States. Efforts to date have made no real

headway in stemming this crisis, in large part because tools that already exist—like evidence-based medications—are not being deployed to maximum impact. To support the dissemination of accurate patient-focused information about treatments for addiction, and to help provide scientific solutions to the current opioid crisis, this report studies the evidence base on medication assisted treatment (MAT) for OUD. It examines available evidence on the range of

parameters and circumstances in which MAT can be effectively delivered and identifies additional research needed.

Mohammad Ali Jinnah was forty years old, a successful barrister and a rising star in the nationalist movement when he fell in love with pretty, vivacious Ruttie Petit, the daughter of his

good friend, the fabulously rich Parsi baronet, Sir Dinshaw Petit. But Ruttie was just sixteen and her outraged father forbade the match. However, when she turned eighteen, they married. Bombay society was scandalized, and Ruttie and Jinnah were ostracized. It was an unlikely union that few thought would last. But Jinnah, in his undemonstrative, reserved way, was unmistakably devoted to his beautiful, wayward child-bride. And Ruttie, on

her part, worshipped him, and could tease and cajole the famously unbending Jinnah. But as tumultuous political events increasingly absorbed him, Ruttie felt isolated and alone, cut off from her family, friends and community. She died at twenty-nine, leaving behind her daughter, Dina, and her inconsolable husband, who never married again. Sheela Reddy uses never-before-seen personal letters of Ruttie and her close friends as well as accounts left by

contemporaries and friends to portray this marriage that convulsed Indian society. A product of intensive and meticulous research in Delhi, Bombay and Karachi, this is a must-read for all those interested in politics, history, and the power of an unforgettable love story.
