*Guide* NewSouth

This book is a 'How to' book that can help medical doctors in career navigation into specialist training in Singapore. With the introduction of the Residency program comes a different set of application process, selection criteria and interview format. This book provides invaluable insight into the current Residency training structure and will help equip readers with strategies to

prepare their CVs, giving them an edge over others in the Residency interview. Existing information on Residency Interview or the Selection Process is scattered. There is a huge deficiency in the current market on the subject of interview preparation as well as detailed choice of specialties based on the local climate. This book provides a step-by-step, practical, easy to understand guide to help readers select their medical specialties, prepare their CVs and excel in interviews.

*Surgical Interviews* Elsevier Health Sciences

A senior surgeon suggests that many

commonly performed operations are not necessary and that any benefits they offer are a placebo. For many complaints and conditions the benefits from surgery are lower, and the risks higher, than you or your surgeon think. In this book you will see how commonly performed operations can be found to be useless or even harmful when properly evaluated. Of course no surgeon is recommending invasive surgery in bad faith, but Ian Harris argues that the evidence for the success for many common operations, including knee arthroscopies, back fusion or cardiac stenting, become current accepted practice without full examination of the evidence. The placebo effect may be real, but is it worth the recovery time, expense and discomfort?

Career Skills for Surgeons CRC Press

A guide to the core basic sciences - anatomy, physiology and pathology - which comprise the essential knowledge required by the trainee entering the specialty of surgery. It focuses on those topics which tend to be recurring examination themes for initial surgical training.

SSB Interview: The Complete Guide, Second Edition Springer

A surgeon must bring a dead family back to life in this fabulist debut novel set in rural India, called "otherworldly" and "a haunting contemplation of life, death, the liminal space in between, and the dogged search for resurrection" (Kirkus Reviews, starred). Fleeing scandal in the city, a surgeon accepts a job at a village clinic. He buys antibiotics out of pocket,

squashes roaches, and chafes at the interventions of the corrupt officer who oversees his work. But his outlook on life changes one night when a teacher, his pregnant wife, and their young son appear. Killed in a violent robbery, they tell the surgeon that they have been offered a second chance at living if the surgeon can mend their wounds before sunrise. So begins a night of quiet work, “as if the crickets had been bribed,” during which the surgeon realizes his future is tied more closely to that of the dead family than he could have imagined. By dawn, he and his assistant have gained knowledge no mortal should have. In this inventive novel charged with philosophical gravity and sly humor, Vikram Paralkar takes on the practice of medicine in a time when the right to

health care is frequently challenged. Engaging earthly injustice and imaginaries of the afterlife, he asks how we might navigate corrupt institutions to find a moral center. Encompassing social criticism and magically unreal drama, *Night Theater* is a first novel as satisfying for its existential inquiry as for its enthralling story of a skeptical physician who arrives at a greater understanding of life's miracles. *Entering the Child's Mind* Catapult “A lifesaver – not just for PA students, but for faculty and administrators trying our best to prepare them. Perfect for students to read and use on rotation.” – James Van Rhee, MS, PA-C, DFAAPA, Program Director, Yale Physician Assistant Online Program Everything you’ll need for your clinical rotations in

**Residency Interview Handbook** CRC Press

From Alexandra Horowitz, #1 New York Times bestselling author of *Inside of a Dog*, an eye-opening, informative, and wholly entertaining examination and celebration of the human-canine relationship for the curious dog owner and science-lover alike. We keep dogs and are kept by them. We love dogs and (we assume) we are loved by them. We buy them sweaters, toys, shoes; we are concerned with their social lives, their food, and their health. The story of humans and dogs is thousands of years old but is far from understood. In *Our Dogs, Ourselves*, Alexandra Horowitz explores all aspects of this unique and complex interspecies pairing. As Horowitz considers the current culture of dogdom, she reveals the odd, surprising, and contradictory ways we live with

dogs. We celebrate their individuality but breed them for sameness. Despite our deep emotional relationships with dogs, legally they are property to be bought, sold, abandoned, or euthanized as we wish. Even the way we speak to our dogs is at once perplexing and delightful. In thirteen thoughtful and charming chapters, *Our Dogs, Ourselves* affirms our profound affection for this most charismatic of animals—and opens our eyes to the companions at our sides as never before.

Ever since the publication of the first edition in 1997, the *Companion to Specialist Surgical Practice* series has met the needs of surgeons in higher

training and practising consultants by providing contemporary, evidence-based information on the sub-specialist areas relevant to their general surgical practice. All eight volumes are thoroughly edited and supported by evidence-based references to support key recommendations. This new Fourth Edition brings together the relevant state-of-the-art specialist information that the editors and authors consider important for the practising sub-specialist general surgeon. Purchase of a print book also includes a downloadable version of the eBook. A standardised approach is used across the series to provide up-to-date information in a way that will be consistent and familiar to the reader. Each volume gives a current and concise summary of the key topics

within each major surgical sub-specialty. Each volume highlights evidence-based practice both in the text and by also identifying the key papers in the extensive list of references at the end of every chapter. Written by an expanded group of authors with an increased international dimension to the content of all volumes. Provides an update on all the key areas of general surgery and its practice, including day case surgery, abdominal hernias, the management of sepsis and the intensive care patient. This guide

delineates 13 Entrustable Professional Activities (EPAs) that all entering residents should be expected to perform on day 1 of residency without direct supervision regardless of specialty choice. The Core EPAs for Entering Residency are designed to be a subset of all of the graduation requirements of a medical school. Individual schools may have additional mission-specific graduation requirements, and specialties may have specific EPAs that would be required after the student has made the specialty decision but before residency matriculation. The Core EPAs may also be foundational to an EPA for any practicing physician or for specialty-specific EPAs. Update: In August 2014, the AAMC selected ten institutions to join a five-year pilot to test the

implementation of the Core Entrustable Professional Activities (EPAs) for Entering Residency. More than 70 institutions, representing over half of the medical schools accredited by the U.S. Liaison Committee on Medical Education (LCME), applied to join the pilot, demonstrating the significant energy and enthusiasm towards closing the gap between expectations and performance for residents on day one. The cohort reflects the breadth and diversity of the applicant pool, and the institutions selected are intended to complement each other through the unique qualities and skills that each team and institution brings to the pilot. Faculty and Learners' Guide (69 pages) - Developing faculty: The EPA descriptions, the expected behaviors, and the vignettes are

expected to serve as the foundation for faculty development. Faculty can use this guide as a reference for both feedback and assessment in pre-clinical and clinical settings.- Developing learners: Learners can also use this document to understand the core of what is expected of them by the time they graduate. The EPA descriptions themselves delineate the expectations, while the developmental progression laid out from pre-entrustable to entrustable behaviors can serve as the roadmap for achieving them.

The Institute of Medicine study *Crossing the Quality Chasm* (2001) recommended that an interdisciplinary summit be held

to further reform of health professions education in order to enhance quality and patient safety. *Health Professions Education: A Bridge to Quality* is the follow up to that summit, held in June 2002, where 150 participants across disciplines and occupations developed ideas about how to integrate a core set of competencies into health professions education. These core competencies include patient-centered care, interdisciplinary teams, evidence-based practice, quality improvement, and informatics. This book recommends a mix of approaches to health education improvement, including those related to oversight processes, the training environment, research, public reporting, and leadership. Educators, administrators, and health professionals

can use this book to help achieve an approach to education that better prepares clinicians to meet both the needs of patients and the requirements of a changing health care system.

This manual teaches students fundamental operating room guiding principles and techniques. Focusing on the essential skills needed, along with the rationale, to perform safely and competently in the operating room, this lab manual prepares students for the role of the surgical technologist in conjunction with the movement of the patient through the surgical procedure. Promoting active participation, this teaching and learning resource helps students develop critical thinking, peer

teaching, and precise performance skills. Written primarily for new surgical technology students, this lab manual is useful to any student entering the unfamiliar operating room environment. Operating Room Skills Rar Medical Services

A photo-filled history of the world-renowned medical center, based on the award-winning PBS documentary by Ken Burns, Erik Ewers, and Christopher Loren Ewers. On September 30, 1889, W.W. Mayo and his sons Will and Charlie performed the very first operation at a brand-new Catholic hospital in Rochester, Minnesota. It was called Saint Mary's. The hospital was born out of the devastation of a tornado that had struck the town six years earlier, after which Mother Alfred Moes of the Sisters of

Saint Francis told the Mayos that she had a vision of building a hospital that would “become world renowned for its medical arts.” Based on the film by acclaimed documentary filmmaker Ken Burns, *The Mayo Clinic: Faith, Hope, Science* chronicles the history of this unique organization, from its roots as an unlikely partnership between a country doctor and a Franciscan order of nuns to its position today as a worldwide model for patient care, research, and education. Featuring more than 400 compelling archival and modern images, as well as the complete script from the film, the book demonstrates how the institution’s remarkable history continues to inspire the way medicine is practiced there today. In addition, case studies reveal patients, doctors, and

nurses in their most private moments as together they face difficult diagnoses and embark on uncertain treatments. The film and this companion book tell the story of an organization that has managed to stay true to its primary value: The needs of the patient come first. Together they make an important contribution to the critical discussions about the delivery of health care today in America—and the world.

Entering the Child's Mind teaches a powerful technique for gaining insight into a child's way of thinking. In the tradition of Piaget and Vygotsky, Dr.

Herbert P. Ginsburg argues that standardized instruments of evaluation often fail to meet the challenges of complex cognition. Understanding that interviews, like any evaluative instrument, can be improperly conducted and assessed, Dr. Ginsburg then seeks to advance the critical analysis of the interview methods and to investigate its effectiveness and reliability. He presents guidelines intended to help novices learn to conduct clinical interviews and to assist more experienced interviewers in perfecting their techniques. Dr. Ginsburg provides to both psychologists and others interested in understanding the minds of children the first comprehensive treatment of the theory and practice of the clinical interview

method. -- from back cover.
