Computers are used to perform the calculations required to simulate the free-stream flow of the fluid, and the interaction of the fluid with surfaces defined by boundary conditions. With high-speed supercomputers, better solutions can be achieved, and are often required to solve the largest and most complex problems. Ongoing researchComputational fluid dynamics - WikipediaComputational Fluid Dynamics (CFD) has become a powerful method to fulfill such demands and is now widely being used to investigate the behavior of liquids, gases and floating objects.
