In the past decade, few subjects at the intersection of medicine and sports have generated as much public interest as sports-related concussions - especially among youth. Despite growing awareness of sports-related concussions and campaigns to educate athletes, coaches, physicians, and parents of young athletes about concussion recognition and management, confusion and controversy persist in many areas. Currently, diagnosis is based primarily on the symptoms reported by the individual rather than on objective diagnostic markers, and there is little empirical evidence for the optimal degree and duration of physical rest needed to promote recovery or the best timing and approach for returning to full physical activity. Sports-Related

Concussions in Youth: Improving the Science, Changing the Culture reviews the science of sports-related concussions in youth from elementary school through young adulthood, as well as in military personnel and their dependents. This report recommends actions that can be taken by a range of audiences - including research funding agencies, legislatures, state and school superintendents and athletic directors, military organizations, and equipment manufacturers, as well as youth who participate in sports and their parents - to improve what is known about concussions and to reduce their occurrence. Sports-Related Concussions in Youth finds that while some studies provide useful information, much remains unknown about the extent of concussions in youth; how to diagnose, manage, and prevent concussions; and the short- and long-term consequences of concussions as well as repetitive head impacts that do not result in concussion symptoms. The culture of sports negatively influences athletes' self-reporting of concussion symptoms and their adherence to return-to-play guidance. Athletes, their teammates, and, in some cases, coaches and parents may not fully appreciate the health threats posed by concussions. Similarly, military recruits are immersed in a culture that includes devotion to duty and service before self, and the critical nature of concussions may often go unheeded. According to Sports-Related Concussions in Youth, if the youth sports community can adopt the belief that concussions are serious injuries and emphasize care for players with concussions until they are fully recovered, then the culture in which these athletes perform and compete will become much safer. Improving

understanding of the extent, causes, effects, and prevention of sports-related concussions is vitally important for the health and well-being of youth athletes. The findings and recommendations in this report set a direction for research to reach this goal.

**Coaching Myths** Page Publishing Inc  
Unlike the generations of coaches that have gone before them, today's coaches are expected not only to teach motor skills to young athletes but to do so in an environment that is conducive to the ethical, emotional, social and physical well-being of each one of them. Each of the 15 chapters of this book presents, and then systematically debunks, the most pervasive, persistent and potentially harmful myths in coaching, including such chestnuts as "play by my rules," "winning is the ultimate goal" and "there's no I in 'team.'" Although the information in every chapter is based on current scientific evidence (and there are numerous source notes), each is written in the everyday language of coaches and covers topics that are of particular interest to coaches, parents, athletic administrators, recreation programming specialists--and even the occasional fan.

Although the physical and psychological benefits of youth participating in sport are evident, the increasing professionalization and specialization of youth sport, primarily by coaches and parents, are changing the culture of youth sport and causing it to erode the ideal mantra: "It's all about the kids." In *Best Practice for Youth Sport*, readers will gain an appreciation of an array of issues regarding youth sport. This research-based text is presented in a practical manner, with examples from current events that foster readers' interest and class discussion. The content is based on the principle of developmentally appropriate practice (DAP), which can be defined as engaging in decisions, behaviors, and policies that meet the physical, psychological, and social needs of children and youth based on their ages and maturational levels. This groundbreaking resource covers a breadth of topics, including bone development, burnout, gender and racial stereotypes, injuries, motor behavior, and parental pressures. Written by Robin S. Vealey and Melissa A. Chase, the 16 chapters of *Best Practice for Youth Sport* are divided into four parts. Part I, *Youth Sport Basics*, provides readers with the fundamental knowledge and background related to the history, evolution, and organization of youth sport. Part II, *Maturation and Readiness for Youth Sport Participants*, is the core of understanding how and why youth sport is different from adult sport. This part details why it is important to know when youth are ready to learn and compete.

Part III, *Intensity of Participation in Youth Sport*, examines the appropriateness of physical and psychological intensity at various developmental stages and the potential ramifications of overtraining, overspecialization, overstress, and overuse. The text concludes with part IV, *Social Considerations in Youth Sport*, which examines how youth sport coaches and parents can help create a supportive social environment so that children can maximize the enjoyment and benefits from youth sport. In addition to 14 appendixes, activities, glossaries, study questions, and other resources that appear in *Best Practice for Youth Sport*, the textbook is enhanced with instructor ancillaries: a test package, image bank, and instructor guide that features a syllabus, additional study questions and learning activities, tips on teaching difficult concepts, and additional readings and resources. These specialized resources ensure that instructors will be ready for each class session with engaging materials. Ancillaries are free to course adopters and available at [www.HumanKinetics.com/BestPracticeForYouthSport](http://www.HumanKinetics.com/BestPracticeForYouthSport). *Best Practice for Youth Sport* provides readers with knowledge of sport science concerning youth sport and engages them through the use of anecdotes, activities, case studies, and practical strategies. Armed with the knowledge from this text, students, coaches, parents, administrators, and others will be able to become active agents of social change in structuring and enhancing youth sport programs to meet the unique developmental needs of children, making the programs athlete centered rather than adult centered so that they truly are all about the kids.

Young children and even infants work hard at mastering various skills and show spontaneous pleasure at their own accomplishment. John Nicholls explores the conditions that cause students to lose their unselfconscious involvement in a game or task and become concerned with how they are stacking up against others. Charting the development of children's concepts of luck, effort, and ability, he argues that with age they are increasingly prone to take superiority over others as the definition of success. An emphasis on interpersonal competition, which permeates Western society, exacerbates this egotistical tendency and results in diminished accomplishment and alienation from school. To overcome these problems, Nicholls argues, we must "become as little children" for whom absorption in exploration and accomplishment come naturally, even when those around them are more competent. This ideal is unlikely to be promoted through technical approaches to education, or by the current emphasis on the role of education in economic development. Instead, Nicholls calls for a progressive approach to education. Difficult though it is to implement, this approach is most likely to increase equality of motivation for intellectual development, substantial accomplishment, satisfaction in work, and more productive relations with others. These are important ideas for anyone interested in achievement motivation, for those professionally involved in education, and for nonspecialists interested in, or worried about, how we educate our children. *Managing Sports Organizations* Springer

In this inspirational yet practical book, the man Parade called "the most important coach in America," subject of the national bestseller *Season of Life*, Joe

Ehrmann, describes his coaching philosophy and explains how sports can transform lives at every level of play, from the earliest years to professional sports. Coaches have a tremendous platform, says Joe Ehrmann, a former Syracuse University All-American and NFL star. Perhaps second only to parents, coaches can impact young people as no one else can. But most coaches fail to do the teaching, mentoring, even life-saving intervention that their platform provides. Too many are transactional coaches; they focus solely on winning and meeting their personal needs. Some coaches, however, use their platform. They teach the Xs and Os, but also teach the Ys of life. They help young people grow into responsible adults; they leave a lasting legacy. These are the transformational coaches. These coaches change lives, and they also change society by helping to develop healthy men and women. InSideOut Coaching explains how to become a transformational coach. Coaches first have to "go inside" and articulate their reasons for coaching. Only those who have taken the InSideOut journey can become transformational. Joe Ehrmann provides examples of coaches in his life who took this journey and taught him how to find something bigger than himself in sports. He describes his own InSideOut experience, starting with the death of his beloved brother, which helped him understand how sports could transcend the playing field. He gives coaches the information and the tools they need to become transformational. Joe Ehrmann has taken his message about the extraordinary power of sports all over the country. It has been warmly endorsed by NFL head coaches, athletic directors at major universities, high

school head coaches, even business groups and community organizations. Now any parent-coach or school or community coach can read Ehrmann's message and learn how to make sports a life-changing experience.
